ServiceNow® Vaccination Status

**Gain insight into the current state of employee vaccinations in your workforce**

How will employers handle bringing people back in the workplace without compromising health and safety? This is one of the numerous questions that will have to be answered as organizations begin returning to the workplace. And with the availability of COVID vaccines, some employers will have vaccination policies to help mitigate the risk of infectious disease transmission. To successfully implement these programs, organizations will require solutions to track and collect data about the current vaccination status of the workplace.

**Empower employees to submit documentation of completed vaccinations.**

The ServiceNow® Vaccination Status application enables organizations to track the status of employee vaccinations in the workplace, including support for subsequent booster shots. Organizations can send out vaccination consent forms based on employee locations, collect vaccination data for workforce planning as needed based on business requirements, and report on the readiness of the workplace. Employees are empowered to submit documentation of completed vaccinations, via desktop or mobile, to meet their employer’s health and safety requirement for a safe return to the workplace or can request vaccination exemptions that can be approved or declined by workplace administrators.

Status updates can be completed manually by employees in response to vaccination reminders that ensure individuals receive subsequent vaccinations. Additionally with the Contact Tracing application, administrators can view and filter employees based on their vaccination status.

Vaccination Status is part of a suite of ServiceNow® Safe Workplace applications and can be used in coordination to help organizations prepare its workforce and workplaces and resume operations after emergencies and pandemics like COVID-19.
