International Data Transfers FAQ

Commonly asked questions about ServiceNow’s international transfers of personal data.

What are ‘international transfers’ of EU personal data?

The General Data Protection Regulation ("GDPR") requires that when personal data is transferred outside the European Union ("EU") or European Economic Area ("EEA"), it must be granted an essentially equivalent level of protection in the country it is transferred to. Such ‘international transfers’ are protected by a number of legal mechanisms.

How does ServiceNow protect customer data transferred outside of the EEA?

ServiceNow relies on EU Commission adequacy decisions and Standard Contractual Clauses ("SCCs") for transfers of customer personal data to its non-EU sub-processing affiliates ("Affiliates"), together with a variety of legal, technical and operational safeguards, and based on a comprehensive transfer impact assessment ("TIA") (details of which are available in ServiceNow CORE) carried out in line with the requirements of EU law and the EDPB Recommendations.

Is ServiceNow using the EU Standard Contractual Clauses issued in June 2021?

Yes. ServiceNow welcomes the new SCCs issued by the European Commission in June 2021, as they cover a broader range of scenarios and are more suited to the type of services that ServiceNow provides. ServiceNow has already and will continue to incorporate these new SCCs into relevant intra-group, customer, vendor and partner contracts involving transfers of data out of the EEA.

Is ServiceNow using the UK International Data Transfer Agreement / Addendum to the EU SCCs?

Yes. Where relevant, ServiceNow is also incorporating these into intra-group, customer, vendor and partner contracts which involve transfers of data out of the UK.

What is ServiceNow’s position on the EDPB Recommendations on supplementary measures?

Our TIA considers all aspects of the EDPB Recommendations, based on the circumstances of the international transfers carried out by ServiceNow. Detailed information on this is set out in our Whitepapers on Additional Safeguards and Transfer Impact Assessment (available in ServiceNow CORE).

Who are ServiceNow’s Sub-Processors?

ServiceNow currently may carry out international transfers to its Affiliates (details of which are set out in our standard DPA) for the purposes of providing our follow-the-sun 24/7 support. ServiceNow does not transfer customer data to any non-ServiceNow entities or third-party sub-processors.
Are ServiceNow's Sub-Processors bound by the EU Standard Contractual Clauses?

Yes. ServiceNow has an intra-group Data Transfer and Processing Agreement in place, to which all relevant non-EU Affiliates are a party, which incorporates the protections of the 2021 EU SCCs (Module 3). ServiceNow also enters into SCCs directly with customers, vendors and partners, where required.

Does ServiceNow have Binding Corporate Rules in place?

As of May 2022, ServiceNow is in the final stages of its application for Binding Corporate Rules (a mechanism for transferring data internationally within the ServiceNow group) with the relevant EU Supervisory Authorities, and expects the successful conclusion of that process in 2022.

Has the invalidation of Privacy Shield affected ServiceNow?

No. In July 2020, the Court of Justice of the European Union held that the Privacy Shield, a mechanism used to validate transfers to the United States, could no longer be used to validate the transfer of personal data from the EEA to the US. However the Court also confirmed that alternative transfer mechanisms, such as the SCCs relied upon by ServiceNow, continue to be valid. While ServiceNow is Privacy Shield certified, it does not currently rely on the Privacy Shield Framework for the transfer of personal data from Europe to the US. ServiceNow will continue to monitor the evolving plans for any new Privacy Shield or similar mechanisms for EU-US data transfers.

How does ServiceNow handle requests from public authorities for access to customer data?

As set out in our standard DPA, ServiceNow will never provide customer data in response to public authority requests, unless we reasonably believe we are legally required to do so. Due to the nature of our services, it is actually unlikely that we would receive such requests, but in that unusual scenario, our approach is always that we would always first redirect such requests to the customer and notify the customer, where legally permitted to do so. More specific information on how ServiceNow handles requests from public authorities, can be found in our Government Requests Whitepaper in ServiceNow CORE.

Has Brexit adversely impacted ServiceNow’s international data transfers?

No. UK customers can choose to be hosted in our UK data centre pair. The UK has now been granted an adequacy decision, so any transfers of EEA customer data into the UK are permitted by this. Transfers of data out of the UK to our Affiliates, are also considered under our TIA and given the continued substantial similarity between UK and EU data protection law and data transfer mechanisms, our legal analysis and additional safeguards etc. apply equally in this scenario.

Does ServiceNow offer an option for Customers who prefer to have their instance data limited to a particular region?

Yes. ServiceNow hosts customers' data in co-location data centre pairs around the world and customers have the option to specify in which region they wish their data to be hosted, including the option of a dedicated EU data centre pair.
Additionally, in May 2022, ServiceNow launched its EU-centric service delivery model, the ServiceNow Protected Platform for the European Union ("SPP EU"). This new option allows Customers to request to have their personal data handled by ServiceNow within the EU, including as part of receiving Customer support, subject to limited exceptions which are critical or within the Customer's control.

Where can I find more information?

The following resources can be used to find more information:

- ServiceNow Website
- ServiceNow Trust FAQ
- Data Security Guide
- ServiceNow Assurance Pack
- Securing the Now Platform eBook
- Cloud Security, Trust and Compliance Center
