

How to Build Business Apps at Lightspeed

1. Imagine the Right App for Your Business

Identify processes that are manual, lack consistent execution, or create redundant data silos.

2. Design Workflows to Automate Processes

Use customized workflows to easily build applications that will automate processes.

3. Build Your App Without Writing Code

Drag and drop pre-built and reusable services, components, and integrations using delegated development for business users and professional developers.

4. Connect Apps, Data, and People

Use enterprise-wide systems and data to support people-to-people, people-to-system, or system-to-system interactions with a single data source.

5. Tap into Real-time Analytics

Drive down costs and increase efficiency by enabling employees to track their work against strategic objectives.

6. Move Your Business Forward at Lightspeed

Build apps that lower costs, increase productivity, and improve agility.
