

Your hospital could deliver better care, faster and more effectively, at lower costs. Here's how.

ServiceNow connects your teams, workflows, and systems—all on a single, integrated platform.

How does that help with the problems that matter?

Your patients want a better experience.

Your physicians want to treat more patients.

Your IT processes need to be simpler.

Your security needs to be stronger.

## Your patients want a better experience.

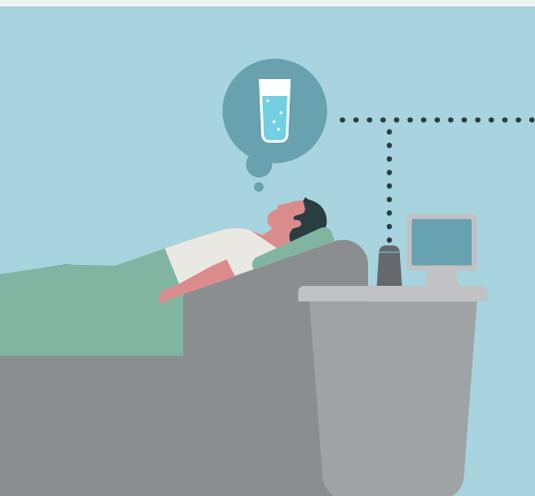

**For example:** Patients need an easier way to make requests and ask for help.

This matters because . . . . .

. . . . . Patients relying on call buttons have to wait until help arrives to explain what they need. Meanwhile the nursing staff doesn't know which calls to prioritize. **But now** . . . . .

A voice-activated, virtual bedside assistant lets patients communicate directly with their care team, while AI-powered request prioritization and smart routing ensure that the right resources are allocated effectively.

# Your physicians want to waste less time and treat more patients.

**For example:** It takes way too long to onboard new physicians and staff.

This matters because . . . . .

You lose months of productivity and potentially hundreds of thousands of dollars in revenue as your new hires wait to get on-boarded. **But now . . .**

A single, integrated, personalized onboarding experience gives every new employee a fast and easy way to get oriented and established on your system.

# Your IT processes need to be simpler and more automated.

**For example:** Making an EMR service request is complicated and time-consuming for your clinicians.

This matters because . . . . .

. . . . . Clinicians are unable to report issues or request enhancements quickly. So, they lose time they need for their patients, or they leave the issue un-reported—and un-solved. **But now . . .**  
.  
.  
.

Clinicians can make service requests directly from the EMR, with the click of a button. The request is routed automatically, and tagged so that the clinician can easily track its progress.

## Your security and compliance needs to be stronger.

**For example:** Your hospital still depends on legacy software products, spreadsheets, and paper-based tools to maintain critical healthcare equipment.

This matters because . . . . .

. . . . . Siloed processes and manual workflows make it much harder to keep your hospital secure and compliant. **But now** . . . . .

Full lifecycle management of clinical assets across your enterprise—all within a single pane of glass—helps you minimize risk exposure for connected medical devices. And automated compliance reporting means you can create reports in minutes, not days.
