

# Transform the way healthcare manages security, risk, and compliance

Identify, prioritize, and accelerate your reaction time for insights and issues

Cyber risks and regulatory pressures are escalating for healthcare organizations, making it harder to maintain patient trust. Already a lucrative target, stretched resources and multiple technology touchpoints increase the attack surface for nefarious cyber criminals to target providers with ransomware.

Too often, healthcare organizations are reacting to problems. That's because:

**SILOED SYSTEMS**

make it difficult for healthcare IT teams to quickly assess threats and vulnerabilities

**POOR VISIBILITY**

leads to impromptu prioritization and draws attention away from efforts to improve patient and clinician experiences

**MANUAL PROCESSES**

create delays when responding to issues and lead to interruptions in patient care and safety

**LACK OF INSIGHT**

leads to blind attack responses, which can be inefficient and result in ineffective remediation efforts

It's not sustainable to keep managing problems the same way. **Healthcare organizations need a more scalable, collaborative approach to better identify and mitigate security and compliance risks.** And with the healthcare industry predicted to spend \$125 billion by 2025 to beef up its cyber defenses, security automation will be a critical area to temper the costs and consequences of security gaps.

Move from reactive to proactive using a single, cloud-based platform that centralizes interoperable workflows and delivers end-to-end visibility for vulnerability and incident remediation.

• **Focus quickly on high-impact risks** using artificial intelligence that automatically prioritizes IT risks with context

• **Improve visibility** by pulling cyber risk information across the extended healthcare organization into one place

• **Reduce compliance costs** by escalating exceptions and recording audit data on a centralized platform

• **Accelerate reaction times** by connecting healthcare IT, risk, and security teams with digital workflows and a single system of action

ServiceNow works across your existing tools and systems to bring everything together in one place for case management. **We deliver a single data model and system of intelligence, along with cross-functional digital workflows and automation to deliver powerful results:**

**REDUCE COSTS**

**\$12M**

in savings over three years using risk management applications

**IMPROVE SECURITY POSTURE**

mean time to contain improvement

**BREAK DOWN SILOS**

**80%**

reduction in open vulnerabilities

**IMPROVE BUSINESS RESULTS**

efficiency gain for risk and compliance activities and vendor risks

ServiceNow® helps you **proactively manage IT risk and security to drive down costs** associated with healthcare by putting the right information in the right hands at the right time.
