

# RiskLens - The Global Leader in Cyber Risk Quantification

RiskLens helps companies to better justify, prioritize and manage the cybersecurity investment decisions and risks that accompany digital growth and transformation. With RiskLens, enterprises can make more informed decisions, optimize their cybersecurity investments and outcomes, and address regulatory and privacy requirements by scaling their quantitative cyber risk management programs.

Organizations achieve these outcomes because they are able to understand and communicate about their cyber risks in the financial terms common to enterprise risk management, facilitating improved decision making across the C-Suite and Board.

The RiskLens platform is the only enterprise-scale SaaS application based on Factor Analysis of Information Risk (FAIR™), recognized by the National Institute of Standards and Technology (NIST) as the standard for the quantification of cyber and technology risk, with a community of more than 10,000 FAIR practitioners worldwide.

## RiskLens and FAIR provide the decision support you need on critical cyber risk management issues

The RiskLens platform utilizes data from your organization in a simple workflow (much like tax software) and quickly generates reports in business-friendly, non-technical terms to answer critical questions such as:

- What are our top risks in terms of bottom-line impact?
- How effective is our cybersecurity program at reducing risk?
- What is our loss exposure from a breach of our crown jewel assets?
- What controls or other risk treatments offer the most risk reduction, or the greatest ROI for reducing cyber risk?

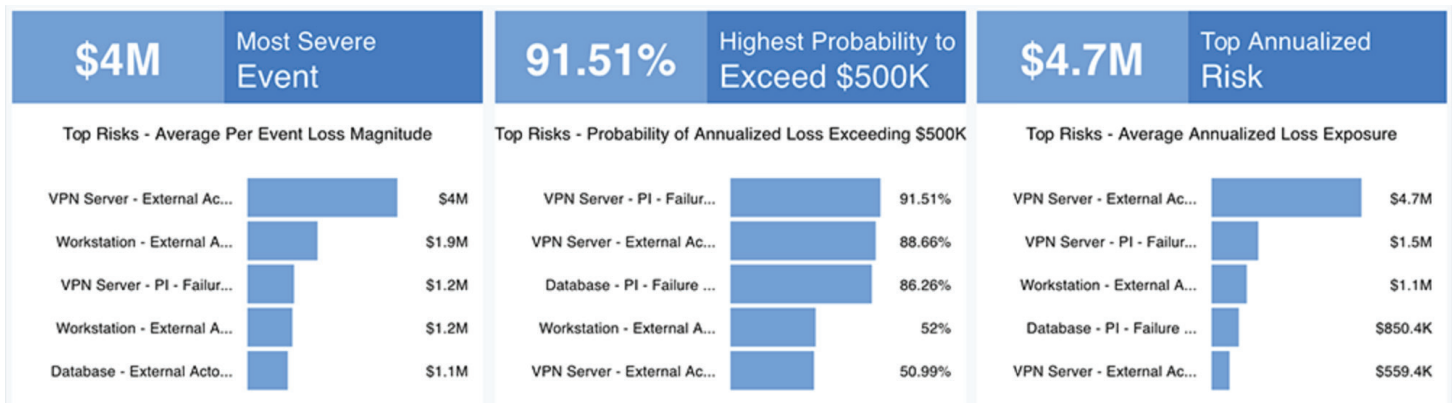

### Benefits

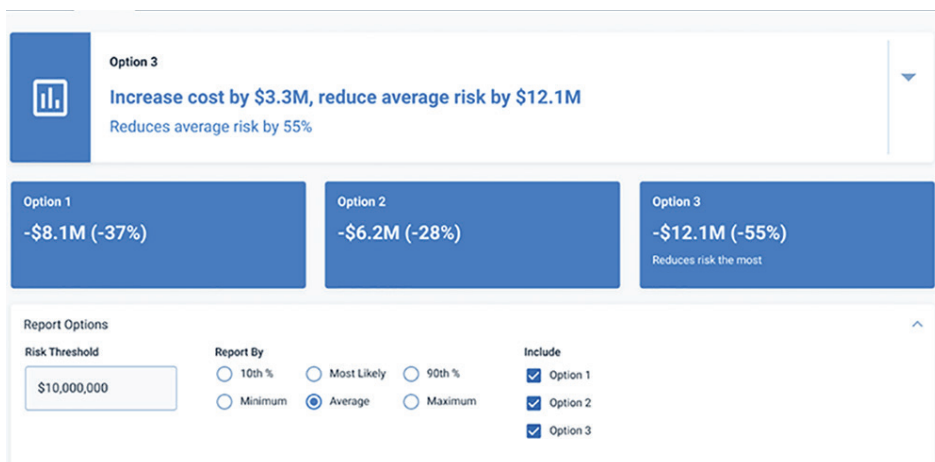

Improving reporting of cyber risk to the business and the board in a language they understand, dollars and cents:

- Identify and prioritize your top risks
- Assess the impacts different treatments have on risks
- Calculate and compare the ROI of controls for reducing risk
- Support key business and digital initiatives with clear supporting risk analysis
- Improve audit, controls, regulatory and privacy communication and responses

## ServiceNow GRC and RiskLens Integration: RiskLens for Quantitative Risk Management

The ServiceNow Governance, Risk, and Compliance Risk Management application now integrates with the RiskLens platform for quantitative cyber risk analysis, enabling GRC customers to invoke quantitative risk assessments directly from ServiceNow and export results of the RiskLens analysis back into the GRC Risk Register – where risks can be prioritized and managed based on financial impact to the business.

### Think of RiskLens as a Risk Register force multiplier

The RiskLens integration enhances the power, the value and the manageability of your Risk Register. Imagine how you could benefit from ready access to a tool to:

- Assess new entries to the Risk Register to understand risk and controls implications of introducing an application.
- Work through all the entries, potentially eliminating some because financial impact did not cross risk appetite levels.
- Prioritize among a large number of policy exception request reviews.
- Quickly respond to regulatory or board of director requests for risk reporting.

### Get started now

Existing RiskLens subscribers can access the integration for free, and new customers can contact RiskLens for a demo to experience the benefits of the RiskLens platform. The RiskLens integration is available on the ServiceNow Store.

## About RiskLens

RiskLens helps organizations make better cybersecurity investment decisions by quantifying cyber risk in financial terms. We are the creators of Factor Analysis of Information Risk (FAIR™), the international standard for cyber risk quantification, and the technical advisors to the FAIR Institute. The RiskLens platform is the only enterprise-scale SaaS application for FAIR analysis, and the RiskLens FAIR Enterprise Model (RFEM) creates flexibility to adopt FAIR and build programs, supporting companies at various levels of maturity and different types of business needs. With our capabilities across the risk management process and a large client base of Fortune 500 companies, RiskLens is the only company with the expertise necessary to help companies navigate their most complex and challenging cybersecurity decisions.
