# How do I use Test Management 2.0 for manual testing?

With **manual testing**, you give someone a list of instructions to follow with expected results, and they document whether their testing returned expected results. Test Management 2.0 is a ServiceNow® application that streamlines creating, managing, and executing the manual testing process.

## How do I get started with Test Management 2.0?

You’ll need to activate the Test Management 2.0 plugin with an admin role if your instance doesn’t include the Test Management 2.0 menu. Reference our product documentation on activating a plugin for more information. The name of the plugin to activate from the list is Test Management 2.0 (com.snc.test_management.2.0).

## What can I do with Test Management 2.0?

**Test managers can:**
- Create and manage tests and test sets
- Evaluate tests, tests steps, and test sets created by users
- Create test plans, test cycles, and test execution suites
- Initiate a testing process, assign testers, and monitor progress
- Assess test results and close a test plan

**Testers can:**
- Create tests and test sets
- Perform tests and record test results
- Update the status of tests
- Report defects and retest, if needed

### Test version
- Test Management 1.0: You cannot create and maintain multiple versions of a test.
- Test Management 2.0: You can create and maintain multiple versions of a test.

### Test relation
- Test Management 1.0: You can associate a test to one test suite only.
- Test Management 2.0: You can associate a test to multiple test sets, test plans, and test cycles.

### Time duration
- Test Management 1.0: You can create a test plan describing how a product or a feature is to be tested.
- Test Management 2.0: You can create a test plan describing how a product or feature is to be tested and the time frame in which the test plan must be run. You can further decompose a test plan into test cycles, test cycles into test execution sets, and specify a time range for their execution.

### Test runs and test results traceability
- Test Management 1.0: You can:
  - Run a single test at a time
  - View the test result
- Test Management 2.0: You can:
  - Run a single test at a time
  - View which version of test has been run
  - View the test results
