   - The case status in the Case details section is updated to **Closed**.

     Note:
     You cannot add comments after the case is closed. You can only view the previous comments in the activity stream.

   - The case additional comments and resolution notes are updated with **Closed by customer**.
   - The case resolution code is set to **Solved by customer**
   - A message at the top of the portal confirms that the case has been closed.
   - The system displays a customer satisfaction survey.
6. Complete the customer satisfaction survey.
   You can also choose to skip the survey. Either choice returns you to the case list on the portal.

Complete a customer service satisfaction survey

After accepting a solution for a case, complete a customer service satisfaction survey to provide your feedback.

Before you begin
Role required: none

When a customer accepts a proposed solution for a case by clicking **Accept Solution** on the case form, a satisfaction survey is displayed in the portal. The customer has the option of completing or skipping the survey. Either choice returns the customer to the list of cases on the self-service portal.

To complete the survey:

Procedure
1. Answer each of the survey questions.
2. Select **Submit**.

Deflect cases with knowledge content

Enable customers to search for information from the knowledge base and and find solutions to their issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_customerservice_customer

About this task
The business portal Case form displays contextual search results based on text entered in the Subject field. These search results provide targeted solutions to customers. Customers can search for information that is related to a case when opening a case. If the search results in any related content, the customer can preview the content.

Note:
By default, search results include knowledge articles, solved questions, and pinned articles.

Procedure

1. Navigate to the business portal.
2. Select **Request** > **Submit a request** > **Submit a case** > **Submit a product case**.
3. Start entering in the **Subject** field.

   If there are any search results that match, they're displayed in the **Related Search Results** widget.

   Note:
   If embedded search has been enabled, the results are displayed inline in the Case form in a **Knowledge results** section and are read only.

4. Perform one of the following actions.
   - Select one of the content links in the **Related Search Results** widget to enter the content directly.
   - Select one of the content links in the embedded **Knowledge results** section to open the content inline as read only.
5. **Optional:** Select **This helped** to mark the content as helpful for resolving the associated case.
6. Select **Submit**.

View install base information from the Business Portal

View a list of install base to track the instances provisioned for your account and see which products or services run on them.

Before you begin
Role required: sn_customerservice.customer, sn_customerservice.customer_admin, sn_customerservice.partner, or sn_customerservice.partner_admin

About this task
You can view all cases and the service status from the last 30 days as well as all active, past, and planned outages. You can also view any active entitlements for the install base. An entitlement is active when its end date is not in the past or it has no end date. If it is linked to a contract, the contract must also be active.

Note:
You can modify the **Active Entitlements** widget to define your own filters for active entitlements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the business portal.
2. Select **My hub** > **Manage install base items** in the header menu.
   The system displays a list of install base items that belong to your account.
3. Select an install base to view the details including cases created on the install base in the last 30 days, active entitlements, as well as service status and outage history.
4. **Optional:** To create a case directly from the install base details, select **Create Case**.

Create a case for install base from the Business Portal

Create a case about a question or issue on your install base from the business portal.

Before you begin

Role required: sn_customerservice.customer, sn_customerservice.partner, sn_customerservice.customer_admin, or sn_customerservice.partner_admin

About this task

Install base enables you to track which instances have been provisioned for your account and the products and services that run on them.

Procedure

1. Navigate to the business portal.
2. Select **Requests** > **Submit a request** > **Submit a case** > **Submit an install base case**.
3. Fill out the fields on the form, as required.

Create Case form

Field	Description
Product	The sold product you have a question on or issue with.
Install Base	The install base item you have a question on or issue with.
Priority	The assigned priority: ○ 1 — Critical ○ 2 — High ○ 3 — Moderate ○ 4 — Low (default)
Subject	A brief description of the question, issue, or problem.
Description	A more detailed description of the customer question, issue, or problem.

Note:
Currently, the **Save as Draft** option is not optimized for Customer Service Management portals and, it is inactive by default.

4. Select **Submit**.
   The case is created, assigned a case number, and added to the user's case list. Select **My Cases** at the top of the customer portal to view the Cases list.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View product information from Business Portal

View a list of products to track the products or services sold to your account and manage your services using service catalogs.

Before you begin

Role required: sn_customerservice.customer, sn_customerservice.customer_admin, sn_customerservice.partner, or sn_customerservice.partner_admin

About this task

You can view a list of products or services that have been sold to your account. You can also view any cases created on the product and all active contracts and entitlements for the product.
An entitlement is active if:

- Its end date isn't in the past or it has no end date.
- The contract it's linked to is also active.

A contract is active if:

- Its state is set to active
- It's linked to a product with an active entitlement.

You can modify the **Active Entitlements** widget to define your own filters for active entitlements.

If product catalog items have been set up in your instance, you can use the **Service Catalogs** widget to view context-sensitive service catalogs based on the services you're subscribed to. Extend your services using service catalogs and request additional items on the services that you have subscribed to.

Procedure

1. Navigate to the business portal.
2. Select **My hub** > **Manage sold products** in the header menu.
   The system displays a list of products or services sold to your account.

   You can only view sold products and all extensions of sold products that are not product inventories.
3. On the form, fill in the fields.

Sold product form

List of sold product fields and their descriptions.

Field	Description
Number	Unique number of the sold product.
Name	Name of the sold product.
Parent sold product	Parent of the sold product, if applicable.
Product Location	Location associated to the sold product.
Unit net price	Net price of a single unit of a sold product.
Product offering	Product offering that is associated with a sold product.
Product specification	The product specification associated with a sold product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The **Product specification** field is available only if you have the Product Catalog Management Core (com.sn_prd_pm) plugin and is not available on the form by default.
Monthly recurring price	Price to be paid on a monthly basis for the usage of a product or service.
One time price	One-time price to be paid for the usage of a product or service.
Quantity	Quantity of a product that is sold to a customer.

4. Select a sold product to view the details associated to it.

Record view of the sold product

List of fields on the record view of the sold product along with their descriptions.

Field	Description
Number	Unique number of the sold product.
Product	Reference to the product model from the CMDB table.
Name	Name of the sold product.
Account	Account associated with the sold product.
Contact	Contact associated with the sold product.
Product offering	Product offering that is associated to the sold product.
Product specification	Product specification associated to the sold product.
Product location	Location associated to the sold product.
State	State of the sold product.
Unit Net Price	Net price of a single unit of sold product.
Quantity	Quantity of a product or service sold to a customer.
Model categories	Reference to the model category table.
Product model's short description	Brief description of the product model.
Product model's description	Detailed description of the product model.

5. View the cases and characteristics associated to the sold product in the related list.

Related list descriptions

Create a product case from Business Portal

Create a case about a question or issue on a product from the business portal.

Before you begin

Role required: sn_customerservice.customer, sn_customerservice.partner, sn_customerservice.customer_admin, or sn_customerservice.partner_admin, sn_acct_consumer.consumer

Procedure

1. Navigate to the business portal.
2. Select **Request** > **Submit a request** > **Submit a case** > **Submit a product case**.
3. On the form, fill in the fields.

Note:
Depending on your role, you might not see the **Account** and **Contact** fields.

Create Case form

Field	Description
Account	The account for which you're creating the case.
Contact	The name of the customer contact for this case.
Consumer	The name of the consumer for this case. **Note:** This field is active only when the Customer Data Models for B2B2C plugin is installed. Once Account is selected, only consumers belonging to the account are displayed.
Asset	The asset tag number or the serial number of the asset associated with this case.
Product	The product model of the asset. A model is a specific version or configuration of an asset (for example, Apple Mac Book Pro). If you select an asset in the **Asset** field, this field is auto-populated if the associated product information is available in the asset record. A product may be associated with multiple assets.
Priority	The available assigned priorities are: ○ 1 - Critical ○ 2 - High ○ 3 - Moderate ○ 4 - Low (default)
Subject	A brief description of the customer question, issue, or problem. **Note:** When you start entering the subject, the application searches for relevant content in the knowledge bases configured for the portal. the results are displayed in the **Related Content** list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Description	A detailed description of the customer question, issue, or problem.

Note:
Currently, the **Save as Draft** option isn't optimized for Customer Service Management portals and, it's inactive by default.

4. Select **Submit**.

Result

The case is created, assigned a case number, and added to the creator's case list. To view this list, navigate to **Requests** > **View Submitted requests** > **View Cases and tasks** tab on the business portal header and select **All Cases** in the left pane.

Guest users experience on Business Portal

Guest users can view the header, footer, knowledge articles cards, and resources menu on the home page.

Guest users landing on the Business Portal can access the home page and several public elements, including the header, menu, footer, and banner widgets, which feature the **Browse Services** and **FAQs** buttons.

They can also view taxonomy topic cards showcasing public content, such as articles and catalog items, and the Knowledge quick link widget displaying public articles.

However, on selecting any card, button or menu items, the guest users are redirected to the login page.

Enable language selection for guest users

The language selector widget enables guest users and unauthenticated users to select, view, and update content in their preferred language.

When a user selects a preferred language, the portal content reloads into the selected language. The widget is enabled by default on the Knowledge portal, the Customer Service Management portal, and the Consumer Service portal. Users can map their languages with regions to view all available languages in the form of a pop-up on the same screen.

To enable the language selector on the business portal, see Enable a language selector in portal headers.

If languages aren't grouped, users can view all available languages as a full-screen experience.

Note:
The full screen mode is available in the mobile view.

Using the Consumer Service Portal

The Consumer Service Portal is a web interface that your company can use to provide information and support to consumers.

The Consumer Service Portal is based on the ServiceNow Service Portal application. Consumers can use the portal to search for information, get their questions answered by other registered members, or request assistance from a customer service agent.

From the Consumer Service Portal, consumers can:

- Search for information, browse knowledge articles, and engage with the community.
- Start a chat session with a customer service agent
- Register, create a login, and create a user profile.

After registering and logging in to the Consumer Service Portal, consumers can:

- Edit user profile information and change passwords.
- Register new products and view a list of currently registered products.
- Contact a consumer service agent about a question or issue.
- Create cases and view a list of current cases.
- Accept or reject proposed case solutions.

Your consumer service portal activity usually begins on the consumer service portal homepage. If you are a logged in user, you see different information than non-logged in users. Your organization can customize the homepage.

Consumer Service Portal homepage for logged in users

UI component	Description
Knowledge	**Knowledge** on the header and the main page takes you to the kb_home page. The knowledge home page allows you to search the knowledge base or view a list of top-rated or most viewed knowledge base articles.
Requests	Displays all your requests and you can also request from the catalog for items and services.
My lists	Lists all your cases.
Get help menu	Click **Get Help** to open a product or order case.
Support menu	Navigate to cases, orders, my products, and other quick links.
Tours	View a tour for additional guidance on how the Customer Service Management application works. Tours appear when your administrator creates them on certain pages.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Consumer Service Portal homepage for logged in users (continued)

UI component	Description
Chat	Click **Chat** to chat with a virtual agent or a customer service agent.
Callback request	Request a callback when the wait time to reach agents is long or agents are unavailable.
Profile menu	Click your profile photo to either view your profile or logout.
Search	Enter a search term and click **Search** to view the search results.
Ask the Community	Click **Ask the Community** to access the Community homepage.
Get help	Click **Get help** to make a request or report a problem by opening a case.
Most viewed articles	View a list of most viewed articles.
Featured articles	View featured community content.
Most useful articles	View most useful articles based on the usage count of the articles.
The following components are available if you have installed communities.	
Recent solved discussion	View a list of recently solved discussions.
Recent community blog	View a list of recently published community blogs.
Community featured content	View a list of featured community content.

Note:
Metadata for each entry in the widgets such as the number of views, number of days from the time the article or feature was published, and rating for the article is displayed.

Customizing the Consumer Service Portal

To customize this portal, navigate to **Service Portal** > **Portals** and click **Customer Service**. See Service Portal for more information about creating a custom interface.

Register for the Consumer Service Portal

Register for the Consumer Service Portal to gain access and create a consumer profile.

Before you begin
Role required: none

Ask your admin to install the External User Registration plugin (ID: com.sn_external_user_register) to view the register link on the Customer service portal header.

Procedure

1. Go to the Consumer Service Portal page by accessing your instance URL and adding a /csp suffix.
   For example, https://example.com/csp.
2. Select **Register**.
3. Fill in the fields on the registration form.
   Your email address must be unique. If you enter an address that is already in the system, you receive an error message. Try again with a different email address.
4. Select **Sign Up**.
   A verification email is sent to the email address you provided.
5. Click the link in the email to verify your email address.

Result
Your registration is complete. You can now log in to the Consumer Service Portal.

Log in to the Consumer Service Portal

Use the name and password that you created during the registration process to log in to the Consumer Service Portal.

Before you begin
Role required: sn_customerservice.consumer

Procedure

1. Navigate to the Consumer Service Portal.
2. Click **Log in** in the portal header.
3. Fill in the fields on the Log in pop-up window.
4. Click **Log in**.
   You are logged in to the Consumer Service Portal and your name and profile picture appears in the portal header.

Change your password from the Consumer Service Portal

Change your password from the consumer portal.

Before you begin

Role required: sn_customerservice.customer

Procedure

1. Click your user name in the portal header to display the user profile information.
2. Click **Change Password**.
3. Fill in the fields on the Change Password form, as appropriate.

Change Password form fields

Field	Description
Current Password	The current password. This field is automatically filled in.
New Password	The new password. This password must: ○ Be a minimum of eight characters in length ○ Include at least one uppercase and one lowercase letter ○ Include at least one number
Confirm Password	Retype the new password.

4. Click **Change**.

View or edit a consumer profile

Registered users with the consumer role can view their consumer profiles, edit the information as needed, and change passwords.

Before you begin

Role required: sn_customerservice.consumer

Procedure

1. Log in to the Consumer Service Portal.
2. Select your user name in the portal header and then select **Profile**.
3. To add a picture to your profile, select **Upload Picture** and select the desired image.
4. To update the personal information in your profile, including name, contact information, and address:
   a. Select the desired field.
   b. Enter the new information in the pop-up window.
   c. Select **Save**.
5. To change your password, select **Change Password**.
   The **Change Password** link appears on the consumer profile when the Self-Service Password Reset plugin (com.snc.password_reset) is activated.
6. Fill in the fields on the Change Password pop-up window and select **Update**.

Register a product from the Consumer Service Portal

Users with the consumer role can register their products from the Consumer Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_customerservice.consumer

Procedure

1. Log in to the Consumer Service Portal.
2. Click **Support** in the portal header and then click **Register Product**.
3. Type a search term in the search field and press Enter to display a list of products.
4. Click the **Select** button on the card for the desired product.
5. Enter the **Serial Number** and the **Purchase Date** for the selected product.
6. Click **Register**.
   After the product is successfully registered, it appears in the My Products list, which includes the products registered to the current user.

View a list of products from the Consumer Service Portal

Users with the consumer role can view a list of their registered products from the Consumer Service Portal.

Before you begin
Role required: sn_customerservice.consumer

Procedure

1. Log in to the Consumer Service Portal.
2. Click **Support** > **My Products** in the portal header.
   This displays a list of products registered to the current user.
3. If desired, click a product to display more information about the product.

Access your list of install base items from the Consumer Service Portal

Access your list of install base items from the Consumer Service Portal so that you can get the detailed information about an install base item. For example, with this list, you can see how many items are registered to you.

Before you begin
Role required: sn_customerservice.consumer, sn_customerservice.consumer_contributor, and sn_customerservice.relationship_contributor

Procedure

1. Log in to the Consumer Service Portal.
2. Navigate to **Support** > **Install Base**.
   In the header on the Consumer Service Portal, you can access a list of the install base items that are registered to you.

   In the list layout for an install base item, the details that are related to consumers in the **Household** and **Consumer** fields are visible. Only consumers with the appropriate roles can see the install base option in the support menu.
3. From the list, open an install base record to see all the details and cases for that install base item.

Create a case from the Consumer Service Portal

As a user with the consumer role, you can create cases from the Consumer Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_customerservice.consumer

Procedure

1. Log in to the Consumer Service Portal.
2. Select **Get Help** in the portal header.
3. Choose between **Get Product Help** and **Get Order Help**.
4. Enter or search for a customer.
5. Enter a product or an order depending on what you selected above.
6. Enter a brief description in the **Subject** field.

   Note:
   When you start entering the subject, the application searches for the relevant content in the knowledge bases configured for the portal and is displayed in the **Related Content** list.

7. Add a description in the **Description** field and add any attachment.

   Note:
   Currently, the **Save as Draft** option isn't optimized for Customer Service Management, and it's inactive by default.

8. Select **Submit**.

Result
The new case is created and added to the Cases list. To view the case, select the link in the case creation message or select **Cases** in the portal header, and then select the case number.

View a case from the Consumer Service Portal

Users with the consumer role can view a list of cases from the Consumer Service Portal and select individual cases to see more detail.

Before you begin
Role required: sn_customerservice.consumer

About this task
Selecting a case opens a form with the following sections:

- A conversation that displays the interaction between the consumer and the customer service agent.
- The action that needs to be taken on the consumer's part, such as accepting or rejecting a solution.
- The case details, including the case number and current status.
- Any attached files.

Procedure

1. Log in to the Consumer Service Portal.
2. Click **Support** > **Cases** in the portal header to view a list of cases related to the current user.
3. Click the case number to view more information about the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. If desired, type a message to the agent and click **Send**.
   Your message becomes part of the case conversation. All responses from the agent are also included in the conversation.

Accept or reject a case solution from the Consumer Service Portal

Users with the consumer role can accept or reject the proposed solution for a case from the Consumer Service Portal.

Before you begin
Role required: sn_customerservice.consumer

About this task
When an agent proposes a solution to a consumer's case, buttons for accepting or rejecting the solution appear in the section of the form that shows the consumer actions.

Procedure

1. Log in to the Consumer Service Portal.
2. Select **My Lists** in the portal header to view a list of cases.
3. Select **Action Needed**.
4. Select the required case number to view more information about the case.
5. Select one of the following from **Actions**.

Option	Description
Accept Solution	Accepts the solution proposed by the agent and changes the case state to **Closed**.
Reject Solution	Rejects the solution proposed by the agent after entering the reason for rejecting the solution. The case state changes to **Open** state.

Chat with an agent from the Consumer Service Portal

Chat with a virtual agent or a customer service agent from the Consumer Service Portal to resolve issues quickly.

Before you begin
Role required: sn_customerservice.consumer

Procedure

1. Select the Chat icon ( ) in the Consumer Service Portal to start a conversation.
2. Select an option from the pre chat survey.
   A virtual agent or a customer service agent responds.
3. Enter your query to continue conversation.
4. **Optional:** To talk to a person instead of a virtual agent, select and then **Contact Support**.
5. When you're finished with the chat, select **End Conversation**.

What to do next
If the agent creates a case or links the discussion to an existing case, you can view these cases from the Consumer Service Portal by selecting **Cases** and displaying the case list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Chat anonymously with an agent from the Consumer Service Portal

Users that are not logged in can chat anonymously with an agent from the Consumer Service Portal to resolve issues more quickly.

Before you begin
Role required: none

Procedure

1. Click the Chat icon ( ) in the Consumer Service Portal to start a conversation.
2. Fill in the information and click **Submit**.
   A virtual agent or a customer service agent responds.
3. **Optional:** To talk to a person instead of a virtual agent, click and then **Contact Support**.
4. When you are finished with the chat, click **End Conversation**.

View a publication on the Consumer Service Portal

View the details of a publication on the Consumer Service Portal and download any attachments.

Before you begin
Role required: sn_customerservice.consumer

About this task
The **Support** > **Publications** link on the Consumer Service Portal displays a list of current publications. You can filter the publications on this list by category and you can further filter the list to show all publications or only those that are unread. You can sort the list by publish date or expiration date. You can also search for a specific term.

After a publication reaches its **Expiry Date**, it is automatically removed from the Publications list.

Procedure

1. Navigate to the Consumer Service Portal.
2. Click **Publications** in the portal header.
   This displays a list of current publications. The information displayed for each publication includes the title, publish date, expiration date, and a brief description.
3. If desired, filter or sort the Publications list.
   - Select a category in the upper-left corner or select **All Categories**.
   - Select either **All Publications** or **Unread Publications** in the upper-right corner.
   - Select either **Publish Date** or **Expiry Date** in the Sort by field.
4. If desired, search the Publications list by entering the search term in the **Search Publications** field.
5. Click a publication name to open.
6. If the publication has attachments, click **Attachments** in the upper-right corner.
7. Select the attachments to download from the pop-up window.
8. Close the pop-up window.
9. Click the return arrow at the top of the publication to return to the Publications list.

Using Conversational Appointment Booking

Customers can initiate an appointment booking conversation in a chat on your support portal using a Virtual Agent, and Agents can use Autopilot to display Virtual Agent topics during conversations.

Conversational Appointment Booking for Customers

Customers can complete the following tasks with a Virtual Agent:

- Book a new appointment in CSM
- Reschedule an appointment in CSM
- Cancel an appointment in CSM

Conversational Appointment Booking for Agents

Agents can use Autopilot to display Virtual Agent topics during Agent Chat conversations. For more information, see Conversation Autopilot.

Schedule an appointment with Conversational Appointment Booking

As a customer or consumer, schedule an appointment from the Virtual Agent chat window on the service portal.

Before you begin

Role required: customer, consumer

About this task

You can only schedule one appointment per location. Only logged-in users can schedule appointments.

Procedure

1. Navigate to the Customer Service Portal or Consumer Service Portal home page by adding the suffix `/csm` or `/csp` to your instance URL.

   Example

   For example: `https://yourportalurl.com/csm`

2. Select the chat icon ( ) to open the chat window and begin a Virtual Agent chat.
3. Enter `schedule appointment`.
4. Choose a date from the calendar.

Result

The appointment is scheduled and the chat is complete.

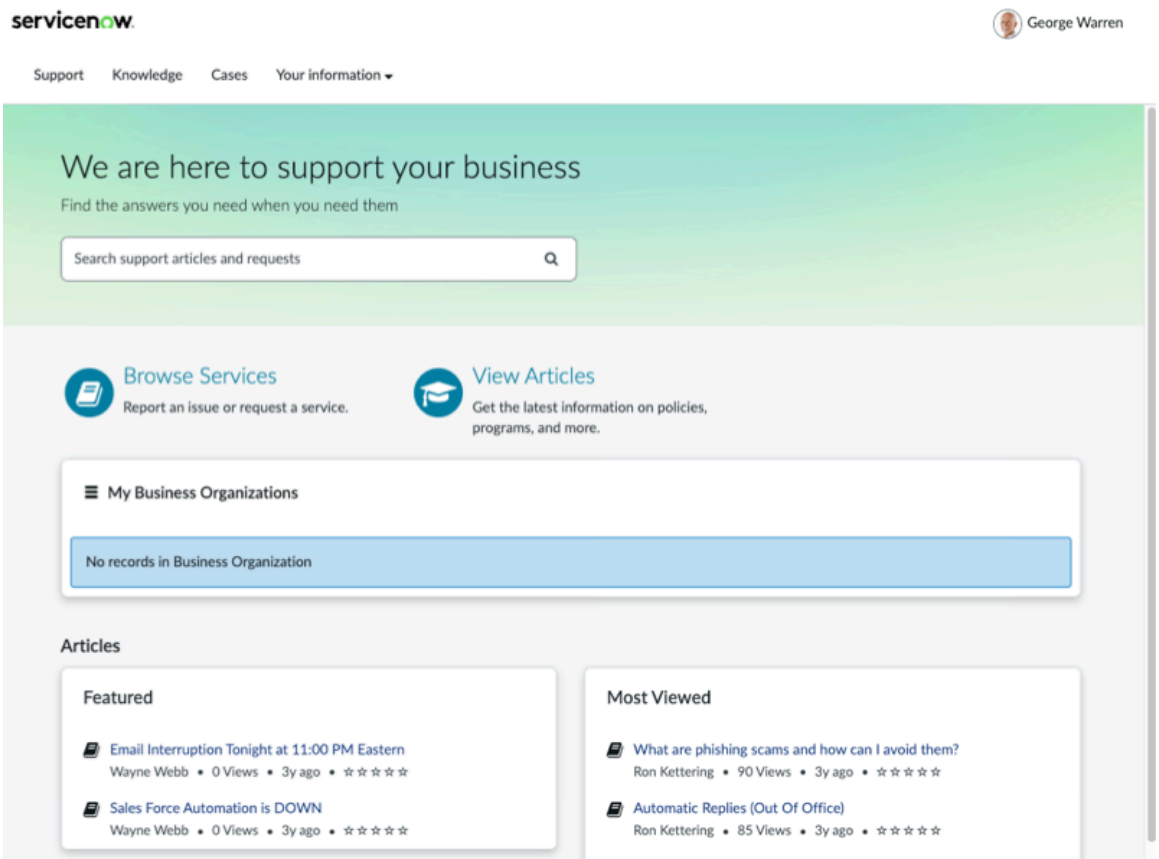
Using the Business Location Service Portal

Use the Business Location Service Portal (BLSP) available with the Customer Service Management (CSM) application as a one-stop shop to manage the internal and external business locations.

As a user with the sn_customerservice.svc_location_manager, sn_customerservice.svc_location_manager_contributor, and admin role, you can use the Business Location Service Portal page to:

- Get a 360° view of a business location.
- Add and manage staff members.
- Submit cases against business locations, sold products, or install base items deployed at a service organization.
- Access Knowledge Base articles and engage with the community.

Business Location Service Portal



From the Business Location Service Portal, you can access and use the following features:

Business Location Service Portal

UI component	Description
Support	Select **Support** to create a customer case.
Knowledge	Selecting **Knowledge** on the header takes you to the kb_home page. You can search the Knowledge Base or view a list of top-rated or most viewed Knowledge Base articles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business Location Service Portal (continued)

UI component	Description
Cases	View the list of cases.
Your Information	Navigate to business locations, sold products, install base items, projects, and customer orders.
Notification	Displays notifications for case tasks with the following criteria • State is **Open**. • **Visible to customer** check box is selected. • User has the Location manager Contributor (sn_customerservice.svc_location_manager_contributor), or Service Organization Contributor roles (sn_customerservice.service_organization_contributor). • User is a member of the business location for which the case task is created. You can view only 7 notifications in the notification tab. To view all the notifications for a case task, select **View all notifications**.
Profile menu	Select your profile photo to either view your profile or log out.
Search	Enables you to search support articles and requests. Enter a search term and select **Search** to view the search results.
Browse Services	Select **Browse Services** to report an issue or request a service. Use the service to register a member at an external business location.
View Articles	Explore the knowledge base to get the information.
Ask the community	Provides access to the Community home page. You can use the community to ask questions and get answers, connect with people who share similar expertise, and join forums and participate in discussions.
My Business Locations	Get the 360° view of the business location. Use the feature to: • Add a member to an external business location. • Report cases on behalf of a business location. • Report cases against sold products deployed at a business location. • Report cases against install base items deployed at a business location.

Track cases on the Business Location Service Portal

Add staff members to a business location in the Business Location Service Portal

Add users as staff members to a business location to support accounts, contacts, consumers, and households.

Before you begin

Role required: admin, sn_customerservice_manager, sn_customerservice.svc_location_manager, sn_customerservice.svc_location_manager_contributor, and sn_bus_loc.location_relationship_manager

About this task

Add internal and external members to a business location. You can add both internal users with the snc_internal role and external users with the snc_external role as staff members to an external business location.

- Administrators and customer service managers can add staff members to any business location.
- Location managers can add staff members to the business locations that they have access to.

Note:
As a user with the sn_customerservice.svc_location_manager role, you can create both internal and external staff members. However, as a user with the sn_customerservice.svc_location_manager_contributor role, you can only create external staff members.

Procedure

1. Navigate to **Home** > **Busines Location Support** > **Services**.
2. Select **Register Member at External Business Location** to open the Register Member at External Business Location record.
   You can use the record to register new location staff or move existing staff between locations managed by the Location manager, and assign responsibilities to staff accordingly.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Register Member at the External Business Location form

Field	Description
External Business Location	The external business location. This field is automatically generated.
Register Staff	Field used to register new location staff or move existing staff from an external business location hierarchy between locations. ○ **New Staff**: Create a user in Service Organization External Staff (sn_csm_service_organization_external_staff) table with (snc_external) role. ○ **Existing Staff**: List of staff members already working under the service organization hierarchy.
First Name	First name of the staff member.
Last Name	Family name of the staff member.
User ID	User ID of the staff member.
Email	Email address of the staff member.
Member	Field used to select an external staff member from the list of service organization external staff record. **Note:** The **Member** field appears only when **Existing Staff** is selected from the **Register staff** field.
Member Type	Field used to assign responsibility for the selected business location. ○ **None**: Creates a member record. ○ **Listed Member**: Creates a member record. With the member record, a responsibility record is created with the type as Listed Member and the responsibility as empty. ○ **Location Contributor**: Creates a member record. With the member record, a responsibility record is created with the type as Location Contributor and responsibility as the Location Contributor. **Note:** Assigning responsibility is applicable to both existing and new staff members.

4. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Additionally, the external business location record is created in the **Service Organization** field of the service organization external staff [sn_csm_service_organization_external_staff] table. A new external staff member record is created for the selected external business location. The admin must assign responsibilities to the staff members. However, if you have selected **None** as a member type, then you must not create a responsibility record.

Result

Once a staff member is added to a business location, the following details can be accessed from the **Business Location Details** tab:

- Cases Requested
- Members
- Available Services
- Accounts
- Consumers
- Households
- Child Business Locations
- Projects

Track cases on the Business Location Service Portal

Agent assistance for your business location staff

Customer service agents receive chat requests from your business location staff on the CSM Agent Workspace. These agents can assist your staff members to resolve issues and manage their cases more efficiently if your staff members fill out a pre-chat survey first.

The customer service agents have visibility into the ongoing requests and case statuses. The agents can efficiently handle the issues from the staff members of a business location.

After an agent accepts an incoming chat request, the **Requesting service organization** field on the Interaction form that the agent sees is automatically filled in with the business location that a staff member selected during the pre-chat survey. To learn more about the pre-chat surveys, see Define pre-chat survey configurations.

Note:
The **Number**, **Type**,**State**, and **Assigned to** fields on the Interaction form are filled by default. To learn more about the fields, see Create cases for a business location in the Business Location Service Portal.

The Open Cases and Recent Interactions related lists on the Interaction form shows a list of the active cases and interactions for the requesting service organization.

A resolution is also provided by interacting with the user. For further assistance, an agent can create a case or link the discussion to an existing case. The **Requesting service organization** field is populated by default when a case is created from an interaction.

Create cases for a business location in the Business Location Service Portal

As a staff member with the location agent role, create and manage cases for your business locations.

Before you begin

Role required: admin, sn_customerservice.svc_location_agent, and sn_customerservice.svc_location_manager

About this task

Staff members with the location agent role can do the following:

- View information for the customers at their location.
- Create cases for an account, consumer, business location, and themselves.
- Register staff members at an external business location.
- Track and update cases created at their location.

Procedure

1. Navigate to **Home** > **Business Location Support** > **Support** > **Create a Customer Case**.
2. On the form, fill in the fields.

Create a Customer Case form

Field	Description
Who are you creating this case for?	The record producer used for to create a case for the contributor user. When the contributor user selects an option, depending on the roles assigned to the logged-in user, additional fields related to that customer type are displayed. ○ **Account**: The logged-in user with the account contributor role. ○ **Consumer**: The logged-in user with the consumer contributor role. ○ **Business Location**: The logged-in user with the service organization contributor role. ○ **Myself**: The logged-in user with the self-contributor role.
Requesting Business Location	Name of the service organization requesting assistance.
Requesting support from Business Location	Name of the service organization from which the **Requesting Business Location** is asking assistance.
Account	Name of the account.
Contact	Contact for the account.
Consumer	Name of the consumer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: This field is active only when the B2B2C plugin is installed.
Household	Household that the consumer belongs to.
Product	Sold product associated with the case.
Install Base	Install base item associated with the case.
Priority	The assigned priority: ○ 1 — Critical ○ 2 — High ○ 3 — Moderate ○ 4 — Low (default)
Channel	Method by which the customer initiated contact and opened the case. ○ Web (default) ○ Phone ○ Email ○ Chat ○ Social ○ Community ○ Alert ○ Virtual Agent ○ In Person
Subject	Subject line specifying the case.
Description	Brief description of the customer question, issue, or problem.

3. Select **Submit**.

What to do next

Similarly, you can report cases on behalf of a business location, against sold products deployed at a business location, or installed base items deployed at a business location.

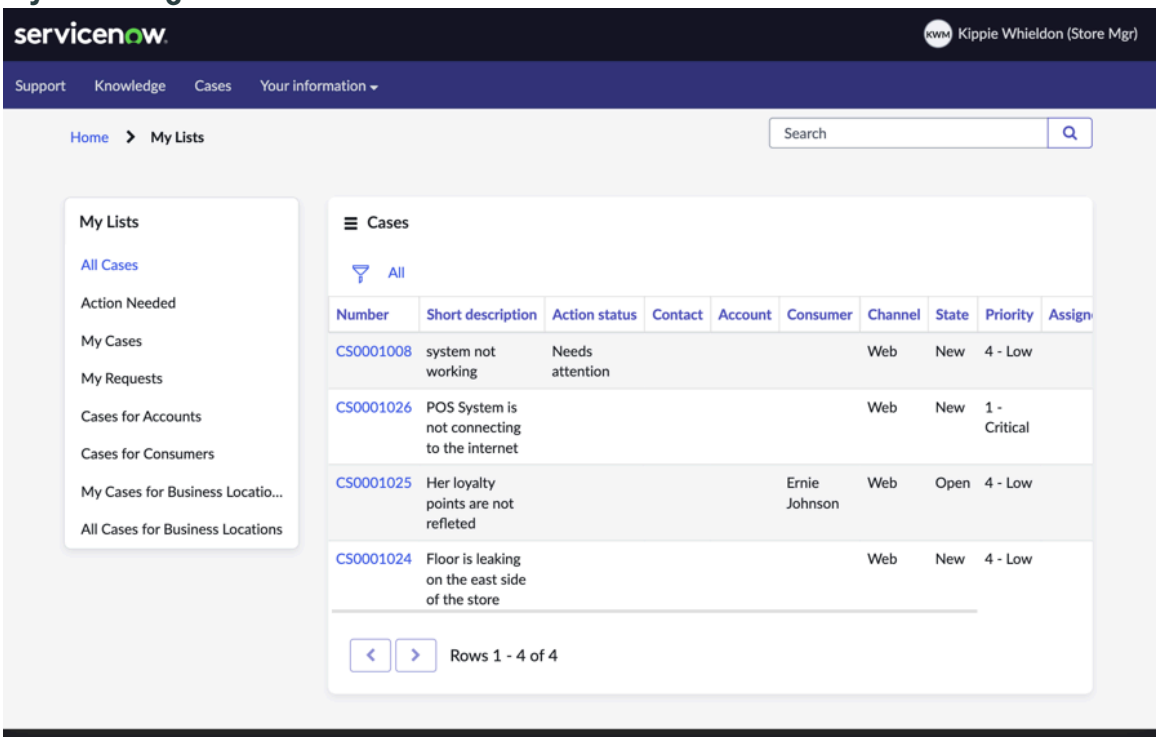
My Lists widget on the Business Location Service Portal



Depending on the roles assigned to the logged-in user, the widget displays the following filters.

My Lists widget filters

My Lists filters	Description
All Cases	List of all the cases.
Action Needed	Cases in the **Resolved** state that are waiting for a customer response.
My Cases	Cases for myself.
My Requests	Cases that are created as a request.
Cases for Accounts	Cases created by the account contributor.
Cases for Consumers	Cases created by the consumer contributor.
My Cases for Business Locations	Cases created by the contributor user on behalf of their business locations.
All Cases for Business Locations	All cases created on behalf of the contributor users' business locations, independent of who created the case.

Track work orders on the Business Location Service Portal

Enable your location staff to track work orders for their business locations using the Business Location Service Portal (BLSP). It enables you to view and manage work orders, helping you track tasks and updates directly related to your specific locations.

Before you begin

Role required: admin, sn_customerservice.service_organization_contributor, sn_customerservice.svc_location_manager_contributor, sn_bus_loc.location_relationship_manager, or sn_customerservice.svc_location_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To access the complete work order functionality, a sn_fsm_servicedesk_agent role is added to the sn_customerservice.service_organization_contributor role.

About this task

Work orders are requests for off-site work. Users with the appropriate roles create the work orders and provide the necessary information needed for the work order tasks. These orders include information about the requested services, including customer names and addresses, the work locations, and any related configuration items. Each work order includes one or more tasks that contain specific details about the work to be performed, such as required agent skills or part requirements.

For more information about work orders, see Manage work orders.

Procedure

1. Navigate to **Home** > **Your Information** > **Business Locations**.
2. On the Business Location Details page, select the business location that you want to track the work order for.
3. From the list of work orders at your business location, select a work order number to view its details, including location, activity, and tasks.

Note:
External location contributors can't access the **Work Order Tasks** tab.

Track customer orders on the Business Location Service Portal

Enable your location staff to track customer orders for their business locations using the Business Location Service Portal (BLSP). The portal enables them to view and monitor order details like order status, account, and channel partner information, helping them stay updated on customer activity for specific locations.

Before you begin

Role required:

- sn_bus_org_orm.org_b2b_sales_rep
- sn_bus_org_orm.org_b2c_ sales_rep
- sn_bus_org_orm.org_sales_mgr
- sn_bus_org_orm.org_relationship_mgr
- sn_bus_loc.org_sales_mgr, or
- sn_bus_org_orm.org_ui

Procedure

1. Navigate to **Home** > **Your Information** > **Customer Orders**.
   The page displays a list of customer orders associated with the business locations.
2. From the list, select a customer order number to view its details.
   For a description of the fields, see Customer Orders form

   You can also access Customer orders by navigating to **Home** > **Your Information** > **Business Locations**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Track opportunities on the Business Location Service Portal

Enable your location staff to track opportunities for their business locations using the Business Location Service Portal (BLSP). The portal enables them to view opportunities and any activity performed on them.

Before you begin

Role required: For details on roles, see Roles and responsibilities.

Procedure

1. Navigate to the business location service portal.
2. Select **Your Information** > **Opportunities**.
   The page displays a list of all the opportunities.
3. From the list, select an opportunity to view its details.
   You can access opportunities specific to a business location by navigating to **Home** > **Your Information** > **Business Locations** and then selecting **Opportunities**.

Track and update projects

Enable your location staff to track projects for their business locations using the Business Location Service Portal (BLSP). You can manage projects, enabling efficient monitoring of progress and updates of your locations.

Before you begin

Role required: admin, sn_bus_loc.location_project_stakeholder, sn_customerservice.service_organization_contributor, sn_customerservice.svc_location_manager_contributor, sn_bus_loc.location_relationship_manager, and sn_customerservice.svc_location_manager

Procedure

1. Navigate to **Home** > **Your Information** > **Business Locations**.
2. On the Business Location Details page, select the business location that you want to track the projects for.
3. See the list of projects by selecting the **Projects** tab.
4. **Optional:** Create a case for the business location or account or consumer by selecting **Create Case**.
5. Register a staff member to the business location by selecting **Add Member**.
   To learn more, see Add staff members to a business location in the Business Location Service Portal.
6. To see **Project Tasks**, **Sub-Projects** and **Cases**, select a project.
7. To update a task, select a task from the list.
   Dates, state, tasks, and cases can be updated.
8. **Optional:** Mark a task as completed by selecting **Mark Complete**.
   State and **Actual end date** is updated automatically.

Analytics and reporting for Customer Service Management

Customer Service Platform Analytics Solutions contain preconfigured dashboards with actionable data visualizations to improve your business processes and quantify the value of self-service.

Customer Service Platform Analytics and Reporting Solutions

Customer Service Platform Analytics Solutions contain preconfigured dashboards with actionable data visualizations to improve your business processes.

Platform Analytic and Reporting Solutions for Self-Service Analytics for Customer Service

Platform Analytics Solutions contain prepackaged Performance Analytics and Reporting content for use with other ServiceNow AI Platform products. This Platform Analytics Solution quantifies the value of self-service using the Self-Service Analytics dashboard for customer service.

Customer Service Platform Analytics Solutions

Customer Service Platform Analytics Solutions contain preconfigured dashboards with actionable data visualizations to improve your business processes.

Platform Analytics data visualizations use Performance Analytics indicator data to show you data over time, helping you analyze your business processes and identify areas of improvement. With Platform Analytics Solutions, you can get value from Performance Analytics for your application with minimal setup. You can always create your own objects as well.

To access available dashboards, navigate to **Performance Analytics** > **Dashboards** and select **All**.

Two Platform Analytics Solutions are available for Customer Service:

- Customer Service (com.snc.pa.customer_service)
- Customer Service Management - Advanced (com.snc.pa.customer_service_advanced)

Note:
Customer Service Performance Analytics solutions are an optional feature available for the Customer Service Management application. To use them, your license must also include Performance Analytics. Once licensed, enable the Performance Analytics Premium for Customer Service and the Customer Service Performance Analytics solutions on the instances where you wish to leverage the enhanced functionality. For more information about licensing Performance Analytics, see Activating your Performance Analytics subscription.

Customer Service solution

The Customer Service solution adds the following features.

Note:
Performance Analytics - Spotlight (com.snc.pa.spotlight) is automatically activated with this solution.

Spotlight groups: Case Spotlight.

Dashboards:

- Customer Service Agent
- Customer Service Manager

Customer Service Management - Advanced solution

The Customer Service Management - Advanced solution adds the following features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Performance Analytics - Spotlight (com.snc.pa.spotlight) is automatically activated with this solution.

Spotlight groups: Case Spotlight.

Dashboards:

- Customer Service Agent - Advanced
- Customer Service Manager - Advanced

These dashboards have all the information shown on the dashboards for the basic Customer Service solution, but also contain additional indicators for the following features. Activate all the plugins below in order to view the additional indicators.

- Major Issue Management
- Customer Service Case Action Status
- Customer Service with Request Management
- Customer Service with Service Management
- Agent Chat
- Advanced Work Assignment for CSM
- Performance Analytics - Content Pack - Advanced Work Assignment

Note:
For more information about the Major Issue Management indicators, see Major issue management analytics.

The Customer Service Management - Advanced solution also adds additional Service Management indicators to the Analytics Hub. For more information, see Customer Service Management integration with Service Management analytics.

Enable Performance Analytics for Customer Service Management

To enable Performance Analytics for Customer Service Management, a user with the admin role can navigate to **Performance Analytics** > **Guided Setup**. Click **Get Started** and then scroll to the section for Customer Service. The guided setup takes you through the entire setup and configuration process.

Customer Portal Usage dashboard

The Customer Portal Usage dashboard enables you to understand the user usage of portals by presenting an aggregate count of sessions created every month.

These sessions don't represent individual users. For example, if you access the portal on two different days, it counts as two separate sessions. For more information about how an aggregate session is counted, see Portal usage calculation.

You can access the dashboard by navigating to **All** > **Self Service** > **Dashboards**. On the dashboard page, search and select `Customer Portal Usage`.

To access more detailed information, place your mouse device over any of the graphical reports. These graphs can be saved as PNG or JPEG files, enabling you to add them to emails or include

Definitions	Description
DEFN1003691	Get all the external user portal session counts for yesterday. Frequency: Daily
DEFN1003724	Get aggregated chargeable external portal sessions for last month. Frequency: Monthly

Customer Service Agent dashboard

The Customer Service Agent dashboard provides quick access to your cases based on criteria that help you prioritize your work. The dashboard also displays summary data on metrics for your organization.

To view the Customer Service Agent dashboard, navigate to **Performance Analytics** > **Dashboards**. Click the **All** tab and select **Customer Service Management** from the Group menu. Click the **Customer Service Agent** or **Customer Service Agent - Advanced** tile.

The Customer Service Management - Advanced Performance Analytics Solution adds the Customer Service Agent - Advanced dashboard. The Advanced dashboard contains two additional indicators: Exceeding Chat Target and Exceeding Case Target.

End users and roles

The Customer Service Agent dashboard includes the following end users and roles.

Agent dashboard end users and roles

End user and goal	Required role
Customer service agent: View and prioritize your assigned cases. View case trends for all agents.	sn_customerservice_agent
Customer service manager: View and prioritize your assigned cases. View case trends for all agents.	sn_customerservice_manager
Content administrator: Can edit the dashboard and manage users, groups, and roles for the dashboard.	pa_admin
Content creator: Can view the dashboard.	pa_viewer

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

End user and roles

Advanced dashboard access by user role

End user	Required role	Benefits
Customer Service Manager	sn_customerservice_manager	Can view the dashboard.
Content administrator	pa_admin	Can edit the dashboard and manage users, groups, and roles for the dashboard.
Content creator	pa_viewer	Can view the dashboard.

Indicators

The Proactive Service - Advanced dashboard provides the following key performance indicators:

Proactive Cases

Number of active cases with critical and acknowledged alerts.

Proactive Cases Promoted to a Major Case

Percentage of proactive cases promoted to a major case.

Affected Customers and Install Base Items

Number of customers affected per month.

Alerts that led to Proactive Case

Percentage of critical or acknowledge alerts that triggered case creation.

Active Case Outages

Number of active case outages per day.

Average Outage Duration

Average outage duration per day.

Outages and Affected Customers

Number of outages and affected customers per month.

Outages Types

Number of outages for each outage type per month.

Top Impacted Customers

Customers most impacted by outages.

Breakdowns

The following breakdowns apply to the indicators on the dashboard:

- # of Affected Customers
- # of Affected Install Base Items
- # of Outages
- Planned Outages
- Unplanned Outages
- Degradations

© 2026 ServiceNow, Inc. All rights reserved.

Customer Service Management integration with Service Management analytics

The Customer Service Management - Advanced Performance Analytics solution provides indicators for incident, problem, change, and request records associated with customer service cases.

The Customer Service Management - Advanced Performance Analytics solution adds additional indicators. Some of these indicators are automatically displayed on the Customer Service Manager dashboard in the Analysis tab. All the indicators can be viewed in the Analytics Hub or can be manually added to a dashboard.

Note:
To view the indicators, you must activate the Customer Service with Service Management plugin (com.sn_cs_sm) and the Customer Service with Request Management plugin (com.sn_cs_sm_request).

Incident indicators:

- Number of Open Cases with Incident
- Number of Closed Cases with Incident

Problem indicators:

- Number of Open Cases with Problem
- Number of Closed Cases with Problem

Change indicators:

- Number of Open Cases with Change
- Number of Closed Cases with Change

Request indicators:

- Number of Open Cases with Request
- Number of Closed Cases with Request

Caused By Change indicators:

- Number of Open Cases Caused By Change
- Number of Closed Cases Caused By Change

To view the indicators in the Analytics Hub, navigate to **Performance Analytics** > **Analytics Hub** and search for any of the above indicators.

To add an indicator to a dashboard, a user with the role pa_admin can navigate to the desired dashboard and then click the **Add Widgets** icon at the top right of the dashboard. Select **Performance Analytics** from the drop down menu, then click **Insights** in the list below. Search for the indicator using the search bar. Click the indicator, and then click **Add**.

Service Manager dashboard

Use the Service Manager dashboard to track and analyze customer service case data.

To view the Service Manager dashboard, navigate to **Customer Service** > **Overview**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Navigating to Customer Service Overview to display the Service Manager dashboard may result in an error. Users with the admin role can update the link for the Overview module using the following steps:

1. Select the Edit Module icon on the Overview module.
2. Select the Link Type tab on the Overview Module record.
3. Replace the link in the **Arguments** field with the following text:

   ```
   now/platform-analytics-workspace/dashboards/params/edit/false/tab-sys-id/cfd42b49713354023ee53ca6498cb5d7/sys-id/06e36279f3d8b8349c285a79155206f8
   ```

4. Select **Update**.

The Service Manager dashboard displays four case-related reports, which are created using the Reports application. You can drill down into these reports for more information about the related cases.

Platform Analytics Solutions for Self-Service Analytics for Customer Service

Platform Analytics Solutions contain prepackaged Performance Analytics and Reporting content for use with other ServiceNow AI Platform products. This Platform Analytics Solution quantifies the value of self-service using the Self-Service Analytics dashboard for customer service.

The following roles and tasks are associated with this Solution:

- ServiceNow AI Platform administrator (admin): Install and activate this Platform Analytics Solution and make any necessary changes to system properties.
- Performance Analytics administrator (pa_admin): Review the indicators, breakdowns, widgets, and dashboards. Set up and start data collection. Share the dashboards with appropriate stakeholders.
- Customer service manager (sn_customerservice_manager): Use the Self-Service Analytics dashboard to view case metrics to understand the current performance of self-service at your organization.

End user and roles

End user and goal	Required role
Customer service manager: Can view case metrics like backlog, resolution rates, SLA, customer satisfaction, and KPIs to understand the current performance of self-service at an organization.	sn_customerservice_manager

Use case

Example 1

A user faces an issue with a purchased product. To resolve the issue, the user logs in to the portal, and searches for and views content. However, the user does not find any content helpful and creates a case.

Example 2

A user faces an issue with a purchased product. To resolve the issue, the user logs in to the portal, searches for and views content, marks the content as helpful, and continues to do other activities without creating a case.

The self-service content was available in both examples. However, in example 1, the user did not find the content helpful and therefore it did not help deflect the case creation. The Self-Service Analytics for Customer Service dashboard enables you to capture not deflected, deflected, or potentially deflected instances with details such as what the user was searching for using the searched terms, the content viewed, and the task created.

Indicators

Indicators define a performance measurement taken at regular intervals of a business service, an activity, or organizational behavior. These performance measurements result in a series of indicator scores over time.

When an administrator activates the Self-Service Analytics for Customer Service plugin (com.snc.pa.self_service_analytics_csm), the Self-Service Analytics PA (com.snc.pa.self_service_analytics) is also activated. Both plugins include indicators for the Self-Service Analytics dashboard for customer service.

The Self-Service Analytics for Customer Service plugin includes the following indicators:

Catalog: Deflections

A monthly count of catalog requests after which the primary activity (case creation) is either found (no deflection) or not found (confirmed or potential deflection) within an activity window.

Communities: Deflections

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A monthly count of community content types after which the primary activity (case creation) is either found (no deflection) or not found (confirmed or potential deflection) within an activity window.

Knowledge: Deflections

A monthly count of knowledge articles after which the primary activity (case creation) is either found (no deflection) or not found (confirmed or potential deflection) within an activity window.

Number of cases resolved

A monthly count of resolutions addressed by customer service agents.

> **Note:**
> The **Resolutions by Channel** widget on the Overview tab of the Self-Service Analytics dashboard for customer service displays this indicator as **Assisted**.

Number of Deflections

A monthly count of deflections for all self-service channels (Knowledge, Communities, Catalog, Virtual Agent).

Self-Service: Confirmed Deflections

A monthly count of deflections after which the primary activity (case creation) was not found depending on the activity type (helpful knowledge articles, helpful community content, catalog requests) within an activity window. An increase in value indicates better performance.

Self-Service: Cost Saved

A monthly calculation of the cost saving for a deflection. The score is calculated according to the formula `([[Self-Service: Confirmed Deflections]] + [[Self-Service: Potential Deflections]]) * 20`.

> **Note:**
> By default, the cost saved by each deflection is set to $20. However, you can modify the formula and set a different cost. To edit the formula, navigate to **Performance Analytics** > **Formula Indicators**, search for and click the **Self-Service: Cost Saved** indicator, and edit the numeric value in the **Formula** field. For more information, see Create a formula indicator.

Self-Service: Potential Deflections

A monthly count of deflections after which the primary activity (case creation) was not found depending on the activity type (knowledge articles views, community content views, Virtual Agent conversations) within an activity window. An increase in value indicates better performance.

VA: Deflections

A monthly count of Virtual Agent conversations after which the primary activity (case creation) is not found (potential deflection) within an activity window.

The Self-Service Analytics PA plugin includes the following indicators:

Catalog: Percentage of requests

A monthly calculation of the percentage of catalog usage compared with the use of other self-service channels. The score is calculated according to the formula `[[Number of Catalog requests]] / ([[Knowledge: Articles viewed this month]] + [[Communities: Views this month]] + [[Number of Catalog requests]] + [[VA: Conversations this month]]) * 100`.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Catalog: Success Rate

A monthly calculation of the percentage indicating the success of the catalog as a self-service channel. The score is calculated according to the formula `[[Number of Catalog requests]] / [[Catalog: Views this month]] * 100`.

Catalog: Views this month

A monthly count of catalog item views. An increase in value indicates better performance.

Communities: Helpful Feedback

A monthly count of helpful Community content types.

Communities: Percentage of community viewed

A monthly calculation of the percentage of Community content types usage compared with the usage of other self-service channels. The score is calculated according to the formula `[[Communities: Views this month]] / ([[Communities: Views this month]] + [[Knowledge: Articles viewed this month]] + [[Number of Catalog requests]] + [[VA: Conversations this month]]) * 100`.

Communities: Views this month

A monthly count of Community content type views. An increase in value indicates better performance.

Knowledge: Articles viewed this month

A monthly count of knowledge articles views. An increase in value indicates better performance.

Knowledge: Helpful Feedback

A monthly count of knowledge articles marked as helpful or rated either 4 or 5.

Knowledge: Percentage of articles viewed

A monthly calculation of the percentage of knowledge articles usage compared with the usage of other self-service channels. The score is calculated according to the formula `[[Knowledge: Articles viewed this month]] / ([[Knowledge: Articles viewed this month]] + [[Communities: Views this month]] + [[Number of Catalog requests]] + [[VA: Conversations this month]]) * 100`.

Number of Catalog requests

A monthly count of catalog requests.

Percentage of helpful Community Content

A monthly calculation of the percentage indicating the success of Communities as a self-service channel. The score is calculated according to the formula `[[Communities: Helpful Feedback]] / [[Communities: Views this month]] * 100`.

Percentage of helpful Knowledge Articles

A monthly calculation of the percentage indicating the success of Knowledge as a self-service channel. The score is calculated according to the formula `[[Knowledge: Helpful Feedback]] / [[Knowledge: Articles viewed this month]] * 100`.

Self-Service: Engagements

A monthly calculation of the total of views from all self-service channels. The score is calculated according to the formula `[[Knowledge: Articles`

`viewed this month]] + [[Communities: Views this month]] + [[Catalog: Views this month]] + [[VA: Conversations this month]]`.

Self-Service: Success Rate

A monthly calculation of the percentage indicating the success of self-service channels. The score is calculated according to the formula `[[Self-Service: Successful Engagements]] / [[Self-Service: Engagements]] * 100`

Self-Service: Successful Engagements

A monthly count of helpful content from all self-service channels. The score is calculated according to the formula `[[Knowledge: Helpful Feedback]] + [[Communities: Helpful Feedback]] + [[Number of Catalog requests]] + [[VA: Successful Conversations]]`.

VA: Conversations this month

A monthly count of Virtual Agent conversations. An increase in value indicates better performance.

VA: Percentage of Conversations

A monthly calculation of the percentage of Virtual Agent conversation usage compared with the usage of other self-service channels. The score is calculated according to the formula `[[VA: Conversations this month]] / ([[Knowledge: Articles viewed this month]] + [[Communities: Views this month]] + [[Catalog: Views this month]] + [[VA: Conversations this month]]) * 100`.

VA: Success Rate

A monthly calculation of the percentage indicating the success of Virtual Agent as a self-service channel. The score is calculated according to the formula `[[VA: Successful Conversations]] / [[VA: Conversations this month]] * 100`

VA: Successful Conversations

A monthly count of Virtual Agent conversations that were not directed to live agents. An increase in value indicates better performance.

Breakdowns

Breakdowns enable you to group or filter indicator scores by a qualitative attribute.

This dashboard includes the following breakdowns:

Channel

Enables you to view indicator scores by a self-service channel such as Knowledge, Communities, Catalog, or Virtual Agents.

Communities Content Type

Enables you to view indicator scores by a Community content type such as answer, blog, comment, document, event, question, or video.

Knowledge Base

Enables you to view indicator scores by knowledge base.

Knowledge Category

Enables you to view indicator scores by knowledge article category.

Type of Deflection

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enables you to view indicator scores by deflection type: no deflection, confirmed deflection, and potential deflection.

Title	Type	Description
Unsuccessful Searches	Bar	A monthly collection of searches for knowledge articles with no results or results with no clicks.

Related topics

Self-Service Analytics

Report knowledge gaps based on unsuccessful searches

Report a knowledge gap from the Unsuccessful Searches report in the Self-Service Analytics dashboard for customer service.

Before you begin

Role required: sn_customerservice_manager

About this task

The Unsuccessful Searches report in the Self-Service Analytics dashboard for customer service reports a collection of searches for knowledge articles with no results or results with no clicks. You can report a knowledge gap for such unsuccessful searches.

Procedure

1. Navigate to **All** > **Self-Service** > **Dashboards**.
2. Click **Self-Service Analytics**.
3. On the Knowledge tab, on the Unsuccessful Searches report, click a bar.
4. Click **Report Knowledge Gap**.
5. In the **Description** field, describe the knowledge gap.
   By default, the **Description** field shows frequently appearing words in the associated collection. You can also enter custom instructions for addressing the knowledge gap. When entering instructions, you can provide a summary of your analysis so that knowledge authors have the necessary information to create an article from the feedback task.
6. Click **Submit**.

Result

If a collection is reported as a knowledge gap, a feedback task of type Unsuccessful search is created in the Knowledge Management application. If the assignment rules are set, the feedback task is assigned to an ownership group or an author.

Configurable Portal widget library

The Configurable Portal widget library is a collection of prebuilt and reusable widgets that enables you to configure the portal homepage.

Configurable Portal widgets

Widget	Description
Portal Polaris Header widget	Display access key features and pages from any place in portal. It shows logo, search, profile, and others on level 1 of the header, and menu items on level 2 of the header.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configurable Portal widgets (continued)

Widget	Description
	The appearance of menu items in level 2 of the header is determined by the Portal Mega Menu widget selected.
Portal Mega Menu widget	The menu on the header of the portal home page to navigate to different pages. It displays topics in a menu format organized hierarchically.
Portal Browse Taxonomy widget	Display taxonomy topics along with the articles and catalog items related to them.
Portal Banner widget	Banner to display the announcements, new product or feature highlights, and important information on the top of the page.
Portal Banner Carousel widget	Displays multiple banners in a carousel to display information on multiple announcements, features, and products.
Portal Quick Links widget	Display different links for quick access including links to a knowledge article, a catalog item, a custom page, or an external URL. You can also select different layouts for quick links cards.
Portal Knowledge Quick Links widget	Display a list of articles for quick access. Articles can be selected based on featured articles, most viewed articles and more criteria or can be selected manually.
Portal Catalog Quick Links widget	Displays catalog items for important request items based on the criteria.
Portal Case Cards widget	Displays case records according to the filter criteria. You can display case details such as state, update, date, and more in a card format.
Portal Data List widget	Displays a list of cases, appointments, work orders, or other records from any ServiceNow table in list or card format.
Portal FAQ widget	Displays a list of frequently asked articles from a selected knowledge table that are categorized based on knowledge article category or related product.
Portal Polaris Footer widget	Display important information at the bottom of each page. The information includes company information and logo, site links, external links, and social media links.
Portal Object widget	Display key information of a record from the tables available on ServiceNow® table. Your users can also take related actions on the selected record.
Portal Taxonomy Topic widget	Displays topics as cards on your portal page enabling your users to access knowledge articles and catalog items related to a topic displayed on your portal in a Portal Browse Taxonomy widget.

Configurable Portal widgets instance options

Reference topics provide information about the instance options for all the Configurable Portal widgets.

Portal Browse Taxonomy widget instance options form

Instance options enable you to configure the Portal Browse Taxonomy widget on the portal.

Data fields on the Instance form (continued)

Instance option	Description
	This field applies only when **Dynamic query** is selected from **Display articles**.
Sort by	Field in the Service Catalog items [sc_cat_item] table that determines the field by which records are sorted and displayed on the widget. This field applies only when **Manually select** or **Dynamic query** is selected from **Display articles**.
Sort Order	The order in which the catalog items appear on a widget. The default sort order is Z to A.

Presentation fields on the Instance form

Instance option	Description
Title	Required title of a Portal Catalog Quick Links widget. The default text is `Catalog Quick Links`.

Behavior fields on the Instance form

Instance option	Description
Show Carousel	Option to switch between carousel view and grid view.
Max Quicklinks to Display	Number of catalog items to appear by default on the widget. The default value is 10.
Card Display Style	The display style of a card on the widget. The available options are: • Thumbnail • Icon on top • Icon on left • Simple text • Title only The default display style is Thumbnail. **Note:** Currently, if you select None, the display style is set to Thumbnail.
Catalog Item page	The Catalog item page that open when the catalog item is accessed. By default, this field is set to the Service Catalog items [sc_cat_item] page.

Portal Data List widget instance options form

The instance options enable you to configure the Portal Data List widget on a portal page.

Data fields on the Instance form

Instance option	Description
Data	Defines the configuration of different categories in the navigation within the widget.
Dynamic data list	Option to display records dynamically based on the configuration provided in the parameter of a portal page URL. **Note:** • The configuration enables administrator to display records from any tables by passing following URL parameters: table, filter, sort order, view, and target view page. • When the **Dynamic data list** is selected, the JSON configuration in the **Data** field is not available.

Presentation fields on the Instance form

Instance option	Description
Categories heading	Required title for all categories. The default text is `Categories`.

Behavior fields on the Instance form

Instance option	Description
Layout	Layout type of the case records and their details displayed in the widget. The available options are: • List view (for both desktop and mobile) • Card view (for both desktop and mobile) • List view (for desktop) & Card view (for mobile) **Note:** Currently, if you select None, the layout is set to List view (for desktop) & Card view (for mobile). The default configuration is List view (for desktop) & Card view (for mobile).
Number of records per page (Desktop)	The number of cases to appear by default on the widget in the desktop. The default value is 20. The maximum value is 1000.
Number of records per page (Mobile)	The number of cases to appear by default on the widget on a mobile device. The default value is 8.

Portal FAQ widget instance options form

The instance options enable you to configure the Portal FAQ widget on a portal page.

Data fields on the Instance form

Instance option	Description
Table	Table from which the records shown as frequently asked questions (FAQs) on the widget are selected. By default, this field is set to the Knowledge [kb_knowledge] table.
Question Field	The field of the table set in the **Table** field that contains the questions. Records with an empty question field aren't displayed on the widget.
Answer Field	The field of the table set in the **Table** field that contains the answer. Records with an empty answer field aren’t displayed on the widget.
Query	Query to filter FAQs. If this field is empty, the widget displays all the FAQs. You can include fields from the provided table only in the encoded filter query. For more information, see Generate an encoded query string through a filter
Sort by	Field in the Knowledge [kb_knowledge] table that determines the field by which FAQs are sorted and displayed on the widget. By default, the field is set to View Count.
Sort Order	The order of the FAQs on the search result page on the widget. The available options are: • z to a • a to z

Data fields on the Instance form (continued)

Instance option	Description
	The default order is z to a. **Note:** Currently, if you select None, the order is set to z to a.

Presentation fields on the Instance form

Instance option	Description
Title	Required title of a Portal FAQ widget. The default text is `Frequently Asked Questions`.

Behavior fields on the Instance form

Instance option	Description
Display search	Option to display a Search field on the widget.
Search Bar placeholder text	Placeholder text for the search field label. The default text is `Search FAQs`.
FAQ View Page	The article page that opens when the **Read more** option is selected by the user. By default, this field is set to the kb_article_view.
FAQ per page	The number of FAQs to appear by default on the widget. The default value is set to 5.
Browse Options	The filter options that appear in the widget and can be selected by the user. The available options are: • Knowledge Category • Related products The default option is Knowledge Category. **Note:** Currently, if you select None, the filter option is set to Knowledge Category.
Show Read More	Displays the entire content of an article when the related FAQ is accessed on the widget. The available options are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Add and configure the Portal FAQ widget

Portal Object widget instance options form

Instance options enable you to configure the Portal Object widget on a portal page.

Data fields on the Instance form

Instance option	Description
Table	Table from which the fields of the selected record are shown as cards on the widget. The default table is the Asset [alm_asset] table.
Record	The system identifier (sys_id) of the record from the specified table. The default sys_id is 00a96c0d3790200044e0bfc8bcbe5dc3. **Note:** Note: • Displays details of the record identified by the sys_id in the URL. If no sys_id is found in the URL, displays details of the record identified by the sys_id in the instance option. • If the sys_id is provided in both the portal web page URL and the **Record** field, the widget displays information based on the portal web page URL. • The sys_id of a record should be taken from the table specified in the **Table** field.

Behavior fields on the Instance form

Instance option	Description
Card title	Fields of the selected record from the specified table to be displayed as the card title in the widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Behavior fields on the Instance form (continued)

Instance option	Description
	Note: You can select up to three fields from the defined table. They'll be combined to form a title for each record displayed on the widget. For example, if you combine the Asset tag, Model category, and Display name fields of a record from the specified table, the card title would be "P1000479 Computer Apple MacBook Pro 15."
Image field	The name of the field of the selected record that contains an image to be displayed as an image on the card.
Image style	The display style for an image inside the widget. The available choices are: • Thumbnail • Avatar The default display style is Thumbnail.
Summary view fields (Desktop)	Fields from the specified table whose name and value are displayed as field value pairs on the card in the desktop view.
Summary view fields (Mobile)	Fields from the specified table whose name and value are displayed as field value pairs on the card in the mobile view.
Details view	Field value pairs and sections from the specified table to be displayed when the **View all** option is selected on the card.
Actions	The actions to appear on the card, which are chosen from a set of predefined actions. The title field from the specified table is used as the display name of the actions. **Note:** • If you select multiple actions, the button label displays **Actions**. • If one action is selected, the actions button displays the name of that action. • If no action is selected, the actions button isn't displayed on the card.
Enable Service Definitions	Option to display the service definitions associated with the record under **Actions**. For details, see Service definitions.
Enable Editing Record	When enabled, users with edit permissions see **Edit details** button as one of the Actions. On selecting it users are navigated to a form page with the default view to edit the record details.

JSON parameter in Configurable Portal Widgets

JSON parameter in Configurable Portal Widgets

Portal Banner widget JSON parameters

JSON parameters define aspects of the Portal Quick Links widget on the Portal Banner widget.

Note:
This information assumes that you're familiar with the JSON code format.

JSON parameters

Parameter	Description
widget_title	Required title of the widget. The default text is `Quick Links`.
card_display_style	The style of a card tile for quick links inside the Portal Banner widget. The available options are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JSON parameters (continued)

Parameter	Description
	• Thumbnail • Icon on top • Icon on left • Title & description only • Title only The default display style is Thumbnail. **Note:** Currently, if you select None, the style is set to Thumbnail.
show_carousel	Option to switch between carousel view and grid view.
quick_links	Name of the field in the presentation section. The default text is `Quick Links`.

Portal Data List widget JSON parameters

JSON parameters define aspects of the Portal Data list widget on the portal page.

Note:
This information assumes that you're familiar with the JSON code format.

JSON parameters

Parameter	Description
categories	Each category displays a set of records from the Customer Case View Case [sn_customerservice_case] table that meets the filter criteria. For each category, you can choose from pre_defined_filters and run_time_filters predefined filter tabs, set the columns for the list view, and determine the fields to be shown in the card view.
ID	A unique identifier that enables the categories condition script to determine whether to show or hide categories on the widget.
label	Name of the category that appears on the navigation pane. If a label isn't entered, the category doesn't appear.
table	The table from which the records are shown on the widget when a category is selected. By default, this field is set to the Case [sn_customerservice_case] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JSON parameters (continued)

Parameter	Description
list_view	The name of the view that defines the list of columns or fields to appear on the widget. For more information on these views, see Create and delete views. If no value is provided, all columns are shown.
card_view_primary_column	A field from the defined table to be displayed in the first column of a card. For example, you can show the case number in the first column.
card_view_secondary_column	A field from the defined table to be displayed in the second column of a card. For example, you can show short description of the case record. This parameter is optional.
card_view_additional_columns":"column1|column2|column3|column4	Field pairs from the defined table to be displayed as additional columns of a card. You can add a maximum of four additional columns. This parameter is optional.
query":"active=true"	Query to filter the records that display under the category. If no value is provided, all records are displayed.
glyph":"glyph_name"	The glyph to appear on the left of the category label in the navigation pane. The glyph name provided should be from the font-awesome library, which can be accessed at the following URL: `https://fontawesome.com/v4/icons/` The currently supported version of the font-awesome library is v4.7. If you use a glyph name from a different version, the image will not appear correctly. **Note:** If both a glyph and an image are defined, the image is displayed. This parameter is optional.
"image_name":"file_img"	An image to appear on the left of the category. The image name should be selected from the Images [db_image] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JSON parameters (continued)

Parameter	Description
	Note: If both a glyph and an image are defined, the image is displayed. This parameter is optional.
record_view_page	The Service Portal that displays the page with details of any record accessed in the widget. This parameter is optional. By default, this field is set to the Case (csm_ticket) page.
pre_defined_filters "filter_name":"Value",	Display cases which are in New, Closed, Open, or Awaiting Info state in any selected category. These filters appear as tabs in the widget. Only Open and Closed case are included by default in the JSON code. The available values are: • filter_name: Name of the filter tab • Value: Name of the case state such as New, Closed, Open, or Awaiting Info. This parameter is optional.
run_time_filters	Displays column and its fields from the defined table as runtime filters in a drop-down list. These runtime filters filter the case records displayed in the widget based on different fields from the defined table. For example, you can display Priority as a column and State, Contact, or Updated as fields. If the runtime filters values are not provided in the column and selection_type parameters, the filter icon will not appear for the category. This parameter is optional.
selection_type	Display the type of selection. The available options are: • Single select: Single selection for the filter column • Multi select: Multiple selection values for the filter columns
values "value":"4"	Values from the defined table for the column parameter. The available values are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JSON parameters (continued)

Parameter	Description
	• Label: Name of a value • Value: Integer value of a field
"ranges": "label":"Last Month", "query":"<Range condition>",	Used to filter the records using a query defined in label and query parameters. For example, you can display case records that have been updated in the last month, last 3 months, or last 6 months. The range configuration is: • Label: Name of the filter option • Query: Query that defines a set of values grouped under a label This parameter is optional.
`"role_based_views": { "field_service_agent_view": "snc_field_technician", "agent_case_view":["snc_customer_service_agent","snc_manager"] }`	Used to display data list according to the role of the logged in user. List the roles in an array to map multiple roles to the same view. All roles in that array share the same view. For example, if you want both support agents and service managers to see the same case view, assign the same view (such as `"agent_case_view"`) to both roles within an array. When a user has multiple roles the system uses the first matching view it finds. This parameter is optional.
"guest_view":"viewname	Used to display items for guest users or not logged in users. Map the view you wish to display for the guest users. To make the items available to guest users, you must set these to public: • Portal Data List widget. • Page containing widget (For example, Cases and Tasks) • Page content instance For details, see Configure public access on the Portal Data List widget. This parameter is optional.
"sort_by":"<column name>"	Used for first#load sorting of Data List.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JSON parameters (continued)

Parameter	Description
	This parameter is optional.
"sort_order":"<asc/desc>"	Order of sorting the data list. Default is ascending. This parameter is optional.

Portal Footer widget JSON parameters

Use the JSON parameters to define aspects of the Portal Footer widget on the portal page.

Note:
This information assumes that you're familiar with the JSON code format.

JSON parameters

Parameter	Description
org_info	The company name and address to appear on the portal footer.
copyright	Copyright information to appear on the portal footer. You can display copyright symbol, the year of copyright, and the name of the copyright holder or organization in the footer.
logo_img_name	The image that can be displayed as a logo in the footer. The image name should to be accessed from the Images [db_image] table.
logo_alt_text	Alternate screen-readable text that describes the brand logo in the footer for accessibility purposes.
sitemap_links_menu_sys_id	The system identifier (sys_id) of the menu record is used to display sitemap links in the Portal Polaris Footer widget. You can create a menu record and map it to the sitemap links by including its sys_id in the JSON code. For more information on how to create a menu record, see Menu Item form.
footer_links_menu_sys_id	The system identifier (sys_id) of the menu record is used to display footer links in the Portal Polaris Footer widget. You can create a menu record and map it to the footer links by including its sys_id in the JSON code. For more information on how to create a menu record, see Menu Item form.
social_links_menu_sys_id	The system identifier (sys_id) of the menu record is used to display social links in the Portal Polaris Footer widget. You can create a menu record and map it to the social links by including its sys_id in the JSON code. For more information on how to create a menu record, see Menu Item form.

Script parameters for the search option in the Portal Banner widget

Description of the JSON parameters for the search option in the Portal Banner widget.

JSON parameter and description

Parameter	Description
Title	Text to appear in the search field before a user starts typing.
Size	Determines the font size and height of the widget. The permitted values are xs, sm, md, and lg.
Color	Color of the search button provided in hex code. The default value is #FFFFFF (white).

Default highlight color for different case states

Default values for the background and text color for all case states on the Portal Case Cards widget.

Default background color for all case states

State name	Default value	Color
New	#CBE9FC	Pale blue
Open	#D1D2EE	Pale purple
Awaiting Info	#FBF7BF	Pale yellow
Resolved	#D2EABC	Celadon green
Closed	#C2C4CA	Grey
Canceled	#FFCCD2	Salmon pink

Portal reference

Customer, consumer, and business portal reference topics provide additional information about form fields, user roles and others.

Business Portal user roles

Different roles allow customers to create and edit cases and manage users from the Business portal.

Business Portal user roles

User role	What this user can do on the Business Portal
Customer [sn_customerservice.customer]	• Create a case for this user's account. • View a list of cases created by this user. • Edit cases created by this user. • Search for information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business Portal user roles (continued)

User role	What this user can do on the Business Portal
Customer case manager [sn_customerservice.customer_case_manager]	• Create a case for this user's account and for child accounts. • View a list of cases created by this user and view cases for child accounts. • Edit cases created by this user and edit cases for child accounts. • Search for information. • Create a case on behalf of another contact in this account. • View a list of cases belonging to this account. • Edit cases belonging to the account. **Note:** The customer case manager role is not automatically added to the **sn_customerservice.contact_role_assignment** system property. To expose this role to customer and partner administrators, navigate to **Customer Service** > **Administration** > **Properties** and add it to this property.
Customer administrator [sn_customerservice.customer_admin]	• Create a case for this user's account. • Create a case on behalf of another contact for this account. • View a list of cases belonging to this account. • Edit cases belonging to this account. • Search for information. • Manage users for this account.
Partner [sn_customerservice.partner]	• Create a case for this user's account. • Create a case on behalf of customer accounts. • View a list of cases belonging to this user. • Edit cases belonging to this user. • Search for information.
Partner administrator [sn_customerservice.partner_admin]	• Create a case for this user's account. • Create a case on behalf of customer accounts. • View a list of cases belonging to this account and to customer accounts.

Business Portal user roles (continued)

User role	What this user can do on the Business Portal
	• Edit cases belonging to this account and to customer accounts. • Manage users for this account and for customer accounts.

Customer Orders form

The following table describes the fields available on the Customer Orders form.

Customer Orders form

Field	Description
Keyword Search	Search bar to filter customer orders using keywords like Order Number or Name.
Number	Unique identifier for each customer order.
Short description	Brief summary for the order.
Account	Customer account that is linked to the order.
Contact	Primary contact person for the order.
Channel partner	Channel partner associated with the customer order.
Order date	Date and time when the order was created.
Status	Current status of the order.

Customer Service Portal user roles

Several different roles allow customers to create and edit cases and manage users from the customer portal.

Customer Service Portal user roles

User role	What this user can do on the Customer Service Portal
Customer [sn_customerservice.customer]	• Create a case for this user's account. • View a list of cases created by this user. • Edit cases created by this user. • View a list of assets belonging to this user's account. • Search for information.
Customer case manager [sn_customerservice.customer_case_manager]	• Create a case for this user's account and for child accounts. • View a list of cases created by this user and view cases for child accounts.

Customer Service Portal user roles (continued)

User role	What this user can do on the Customer Service Portal
	• Edit cases belonging to this account and to customer accounts. • Manage users for this account and for customer accounts.

Consumer Service Portal properties

Properties that the system administrator can set to limit the number of registered products per consumer, the number of open cases per consumer, and the number of attachments per consumer record.

Consumer Service Portal properties

Property	Description
consumer_max_attachments_per_record	Maximum consumer attachable items per record. • **Type**: integer • **Default value**: 5 • **Location**: **Customer Service** > **Administration** > **Properties**
consumer_max_new_cases_daily	Maximum new cases that a consumer can create per day. • **Type**: integer • **Default value**: 10 • **Location**: **Customer Service** > **Administration** > **Properties**
consumer_max_comments_per_case_daily	Maximum comments that a consumer can post per day on a case. • **Type**: integer • **Default value**: 25 • **Location**: **Customer Service** > **Administration** > **Properties**
consumer_max_products	Maximum registered products per consumer. • **Type**: integer • **Default value**: 25 • **Location**: **Customer Service** > **Administration** > **Properties**
create_case.description.enable_html_editor	Enable the flag to add description using the HTML editor on the Create Case form page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Consumer Service Portal properties (continued)

Property	Description
	• **Type**: boolean • **Default value**: True for new customers and False for upgrade customers. • **Location**: **Customer Service** > **Administration** > **Properties**

Rate limit rule form for guest user access to catalog items

The REST API Rate Limit Rule form enables you to set the number of API requests in an hour by guest users.

REST API Rate Limit Rule form fields

Field	Description
REST API resource	Rest API resource. This field is auto-populated depending on the values entered in the other fields.
Name	Unique name for the rate limit rule.
REST API	REST API selected from the list of all external-facing REST APIs for the instance. Select **Service catalog**.
Version	Version of the REST API. Values listed depend on the REST API selected. Select **latest**.
Resource	Resource for the version. Values listed depend on the Version selected. For example, • Buy Item • Submit a Record Producer • Validate Variable Regex (If the item consists of a variable which requires Regex Validation) • Checkout Order Guide • Variable display value • Check requested for delegation on item
Active	Check box to indicate that the rate limit rule is active.

REST API Rate Limit Rule form fields (continued)

Field	Description
	Rate limit rules are activated by default as soon as you create them. You can deactivate rate limit rules to stop enforcing a rate limit or activate rate limit rules to resume enforcing a rate limit.
Request limit per hour	Maximum number of requests permitted in an hour. **Note:** Whenever you update the value of this field, the ServiceNow AI Platform resets the count of requests to 0 and deletes all violations for the current hour.
Apply to	Users restricted by this rule: • **Single user** applies the rate limit to a specific user. • **Users with role** applies the rate limit to all users with a specific role. • **All users** applies the rate limit to all users. Select **Users with role**.
Role	Role to which the rate limit applies. Select **public**. **Note:** Appears only when you select **Users with role** at the **Apply to** field.

Sitemap Generator for the Consumer Service Portal

The ServiceNow® Sitemap Generator application enables you to efficiently define and automatically generate XML sitemaps.

Sitemap Generator configuration requirements for the Consumer Service Portal

The sitemap is generated from a script or static XML. Validating sitemaps isn't handled automatically, so verify when creating a sitemap that its contents meet the following requirements:

- Includes only the knowledge base and catalogs configured for the Consumer Service Portal
- Includes only Consumer Service Portal pages with unauthenticated user access
- Excludes Consumer Service Portal URLs that aren't publicly accessible
- Excludes pages that respond with a 301 redirect

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Excluded retired and expired knowledge base articles
- Includes hreflang support for knowledge articles

For information about sitemap requirements for search engine optimization (SEO), see Build and submit a sitemap in the Google documentation.

Portal usage calculation

Portal usage enables you to track how your customers and employees are using the portal. The Customer Portal Usage dashboard provides information about portal visits resulting in session counts.

To view the Customer Portal Usage dashboard, navigate to **All** > **Customer Service** > **Administration** > **Portal Usage**.

Note:
You can ignore the bot session usage that is captured as part of this dashboard.

Note:
This definition tracks usage for customer service portals based on the user roles and ignores usage for non CSM portals or roles. Sessions are tracked for the following roles:

- External roles: sn_esm_user, sn_customerservice.requester, sn_communities.community_user
- Internal roles: sn_customerservice.self_contributor

A user session is a period of activity on the Customer or Consumer Service Portal by any of the following session types:

- Guest session: Session where the user isn't logged in
- Bot session: Separate count of sessions generated due to bots and crawlers
- External session: Session where the user is an external user, typically a customer, or consumer who is logged in

The aggregate session count is based on the following

calculations:

A user session times out after a specific period of inactivity.

User access to the self-service portals is tracked as follows: per session, per day, and per portal. If the same user logs in from multiple browsers or devices, each login is counted as a separate visit. Each first call of a portal page starts a session and, the usage metrics are calculated for the 24 hours window.

The default session timeout is 30 minutes. This setting can be adjusted using a system property. For more information about modifying the session timeout setting, see Manage user sessions.

Site visit calculation examples

A user logs in, logs out, and then logs in again.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example of a site visit calculation for a user who logs in, logs out, and then logs in again

Step	User activity	Billable count incremented
1	User visits the portal as an anonymous or guest user	Yes
2	User logs in	No
3	User logs out	No
4	User logs in immediately after logging out	Yes

A user logs in and continues the session past midnight:

Example of a site visit calculation for a user who logs in and continues the session past midnight

Step	User activity	Billable count incremented
1	User visits the portal as an anonymous or guest user	Yes
2	User logs in	No
3	User session continues past midnight	**Yes**
4	User logs out	No

Customer Service Cases list

The Cases list displays a list of customer service cases for the current user.

Users with the sn_customerservice_agent or sn_customerservice_manager roles can view the Cases list in the Customer Service Management application. The default view of the Cases list includes the following columns:

- **Number**
- **Short description**
- **Contact**
- **Account**
- **Channel**
- **State**
- **Priority**
- **Assigned to**
- **Updated**
- **Case Report** (add a column to access this table if needed)

External customers can view a list of cases from the customer portal. For external users with the sn_customerservice.customer or sn_customerservice.customer_admin roles, the Cases list displays a subset of case information, including:

- **Number**
- **Short description**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Product**
- **Priority**
- **State**
- **Updated**

For external users with the sn_customerservice.partner or sn_customerservice.partner_admin roles, the **Account** column is also displayed.

Cases displayed in the Case list by user role

The cases included in the Case list are determined by user role.

Internal and External for the Case List

User Role	Cases Included in Case List
Internal roles	
sn_customerservice.customer_admin	All cases
sn_customerservice_manager	All cases
sn_customerservice_agent	All cases
External roles	
sn_customerservice.customer_admin	• Cases created for the customer administrator's account • Cases created by contacts who have a contact relationship with the customer administrator's account **Note:** A contact relationship enables a contact with the customer role or customer admin role to manage the account for which the contact relationship has been established.
sn_customerservice.customer	• Cases created by the customer • Cases created by an agent for the customer

sn_customerservice.partner_admin	• Cases created by the partner:
	  ○ For their own account
	  ○ For a customer account
	• Cases created for the partner administrator's account

sn_customerservice.partner	• Cases created by the partner • Cases created by an agent for the partner

Internal and External for the Case List (continued)

User Role	Cases Included in Case List
	• Cases created for the same account • Cases created from a partner account

Engagement Messenger reference

Reference topics provide additional information about Engagement Messenger.

Greeting feature configuration

Understand the configuration of the Greeting feature in the Engagement Messenger to configure the field values.

Greeting feature configuration form

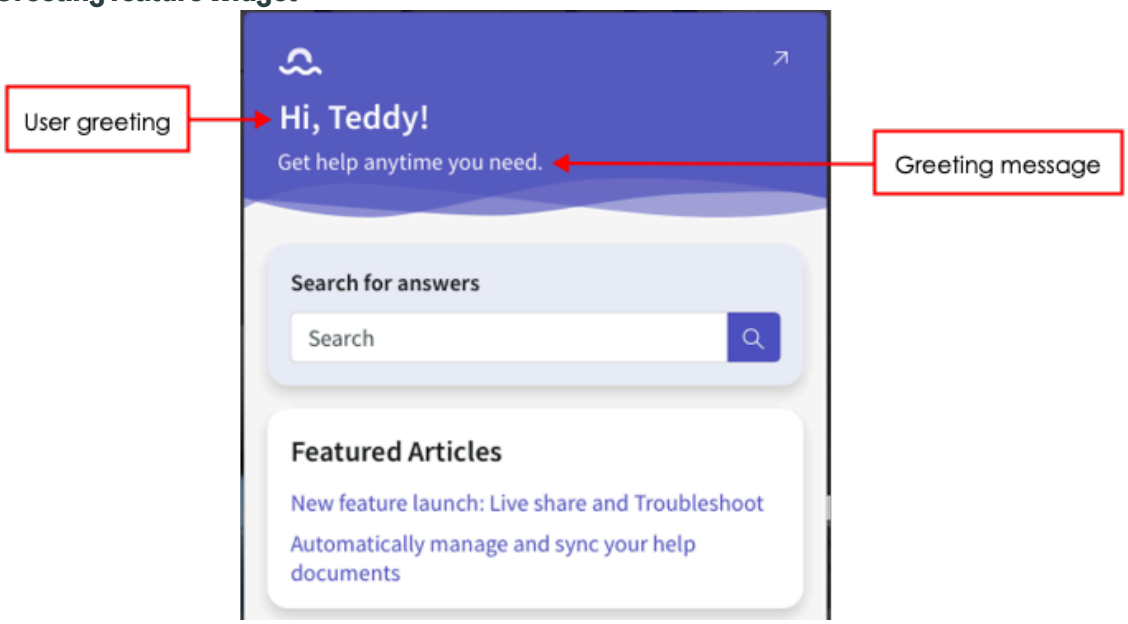
Field	Description
Enable for unauthenticated users	Option for enabling this feature for guest users who visit the website that hosts the messenger.
Unauthenticated user greeting	Text that is displayed in the header of the messenger home page to greet a guest user. For example, Hello!
Enable for authenticated users	Option for enabling this feature for users who sign in into the website that hosts the messenger.
Authenticated user greeting	Text that is displayed in the header of the messenger home page to greet a user who signs in into the website. This field is automatically set to **Hi, <user>!**, where <user> indicates the name of the user who has logged in. The other variables that you can use with <user> are the following: • <title> which indicates the salutation such as Mr., Ms., or Dr. as per the details in the Users [sys_user] table. • <part_of_day> which displays the greeting based on the part of the day of the user's region. For example, Good morning, Good afternoon, or Good evening.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Greeting feature configuration form (continued)

Field	Description
Greeting message	Tagline for the user greeting on the header of the messenger home page. [[URL|Display Text]] indicates format to define URL and display text. For example, `[[https://www.example.com|Example]]`

Greeting feature widget



Knowledge feature configuration

Understand the configuration and related lists of the Knowledge feature in Engagement Messenger to configure the field values.

Knowledge feature configuration form

Field	Description
Show articles by	Article category that is shown on the home page of the messenger. You can select one of the following categories:

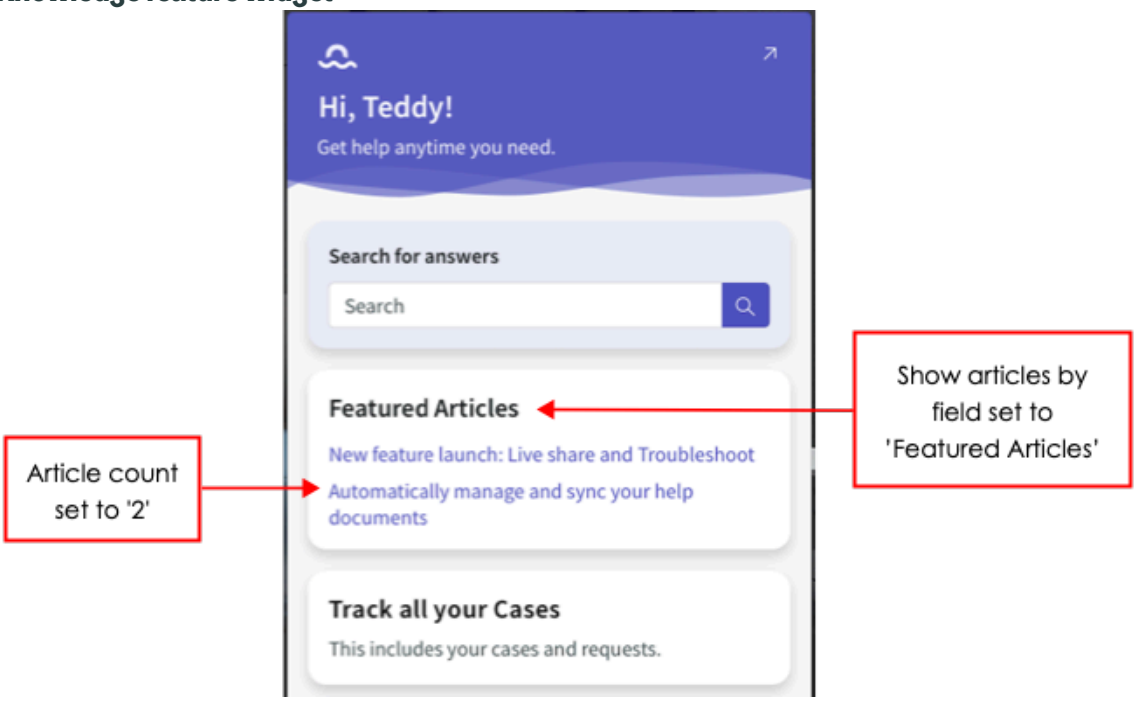
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge feature configuration form (continued)

Field	Description
	• Featured articles: Articles that are based on the keywords that are associated with the articles. For information on displaying articles in the Featured content section, see Add a knowledge article to featured content. • Most viewed articles: Articles that have the highest view among the articles of your knowledge base. The articles shown in the messenger are from the knowledge bases that you add in the **Knowledge bases** field.
Article count	Number of articles that are shown on the messenger home page. The articles are shown based on the option that you select in the **Show articles by** field.
Knowledge Bases	List of knowledge bases that are associated with your messenger module. Use the Edit option ( ) and search to add a knowledge base to your messenger module.
Enable copy permalink	Option for enabling your customer to copy the permalink of a knowledge article.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge feature widget



Note the following points while you are configuring the Knowledge feature on your Engagement Messenger module:

- To add knowledge bases to your messenger module, verify that the knowledge_admin role is manually assigned to the user with Engagement Messenger admin [sn_csm_ec.ec_admin] role.
- If the knowledge base that you added to the Engagement Messenger has no articles, then the homepage of the messenger UI does not display any knowledge article widget even when you select a value for the **Show articles by** and **Article count** fields.

Note the following points regarding the live preview of Knowledge feature. However, the actual functionality of the feature is not affected when the Engagement Messenger is deployed in your website.

- The list of articles that is shown in the messenger live preview depends on the application access that the knowledge_admin has to the articles.

  If the knowledge_admin does not have access to any articles, then no content is displayed in the preview. In such a case, only a title **Featured articles** or **Most viewed articles** is displayed.

- Changing the value of the **Show articles by** field refreshes only the title and not the content in the messenger preview.

Search feature configuration

Understand the configuration of the Search feature in Engagement Messenger to configure the field values.

Search feature configuration form

Field	Description
Search message	Text that is used for the search feature widget in the messenger.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search feature configuration form (continued)

Field	Description
Placeholder text	Placeholder text that appears in the search box.
Enabled for unauthenticated users	Option for enabling this feature for guest users who visit the website that hosts the messenger. **Note:** • You also must configure EC AI Homepage Search widget, Typeahead Search widget, and AI Search Assist widget for public access to enable AI search for unauthenticated users. For more information, see Enable AI Search in Engagement Messenger for unauthenticated users. • Starting with the Vancouver release, the chat client was enabled by default only for authenticated users. To enable the chat client for unauthenticated users to be able to access Virtual Agent chat and Live Agent chat, you must enable the *$sn-va-web-client-app* and *sn_va_web_client_app_embed* pages for public access. For more information, see Make UI pages public or private.
Enabled for authenticated users	Option for enabling this feature for users who sign in to the website that hosts the messenger.
Search application	Application that is used to power the search functionality in Engagement Messenger. This field is automatically set to **Engagement Messenger AI Search Config**. To configure the new search application, navigate to **Engagement Messenger** > **Modules** > **Administration** > **Search Applications**.

In addition to configuring these fields for Engagement Messenger, you must configure AI Search in your ServiceNow instance and then enable Typeahead Search and AI Search Assist widgets so that the unauthenticated users can use the AI search feature from Engagement Messenger.

For more information on enabling Typeahead Search and AI Search Assist widgets for Engagement Messenger, see Enabling AI search in the Customer and Consumer Service Portals for unauthenticated users.

For more information of AI Search configuration, see Configuring AI Search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on the availability of AI Search in your instance, see the AI Search Availability [KB0867751] article.

Note:

- In the Firefox browser, AI Search results aren't displayed on the Engagement Messenger home page.
- If AI Search isn't enabled:
  - The search feature won't be available for users if the messenger module is created on or after version 5.6.
  - Zing search is used for messenger modules created before version 5.6.

Case management feature configuration

Understand the configuration of the Cases feature in Engagement Messenger to configure the field values.

Cases feature configuration form

Field	Description
Title text	Title for the feature widget in the messenger.
Subtitle text	Description for the feature widget in the messenger.
Feature launch message	Text for the Case form launcher widget in the messenger. For example, if a user provides feedback to a knowledge article that it wasn't helpful, the messenger displays a widget to create a case. Clicking this widget launches a case form for the user to fill and submit.
Feature launch description	Description for the Case form launcher widget in the messenger.

Note:
The Case feature is not available for the guest users.

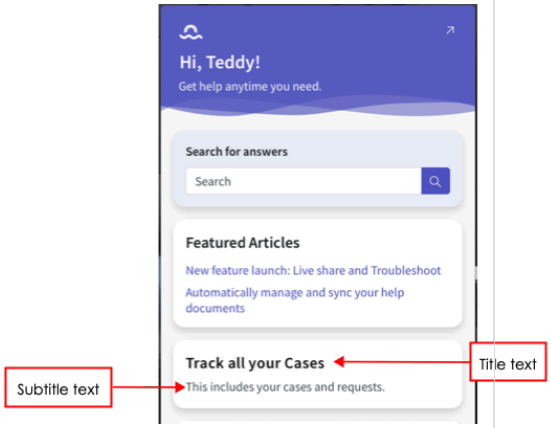
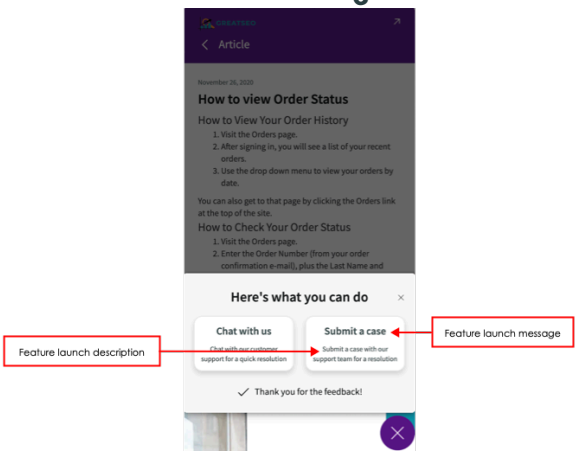
Cases feature widget



Cases feature launcher widget



Catalog feature configuration

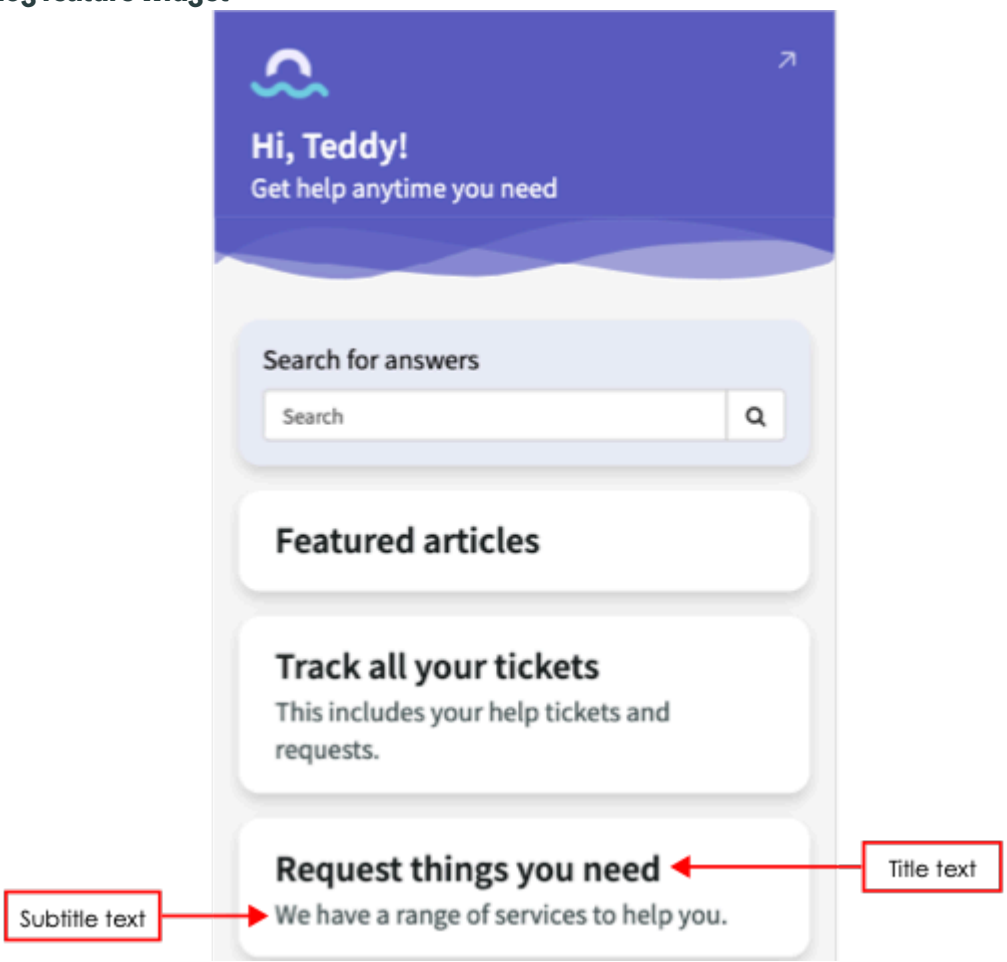
Understand the configuration of the Catalog feature in Engagement Messenger to configure the field values.

Catalog feature configuration form

Field	Description
Title text	Title for the feature widget in the messenger.
Subtitle text	Description for the feature widget in the messenger.
Catalogs	List of catalogs that are associated with your messenger. Use the Edit option ( ) and search for a catalog to add to your messenger.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Catalog feature widget



Note:
When you upgrade Engagement Messenger application from v1.0.0 to a newer version, the Catalog feature is disabled for all the existing messenger modules. However, AI search results from the home page of the Engagement Messenger still show catalogs to the users. For more information, see the Known issues in Engagement Messenger [KB0952509] article.

Field service feature configuration

Understand the configuration of the field service feature in Engagement Messenger module to configure the values.

To enable the field service feature, ensure that you activate the Field Service Management - Customer Experience plugin (com.snc.fsm_customer_experience) in your ServiceNow instance.

Once the plugin is active, navigate to the Features section of the guided configuration view of your Engagement Messenger module and enable the Field service feature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

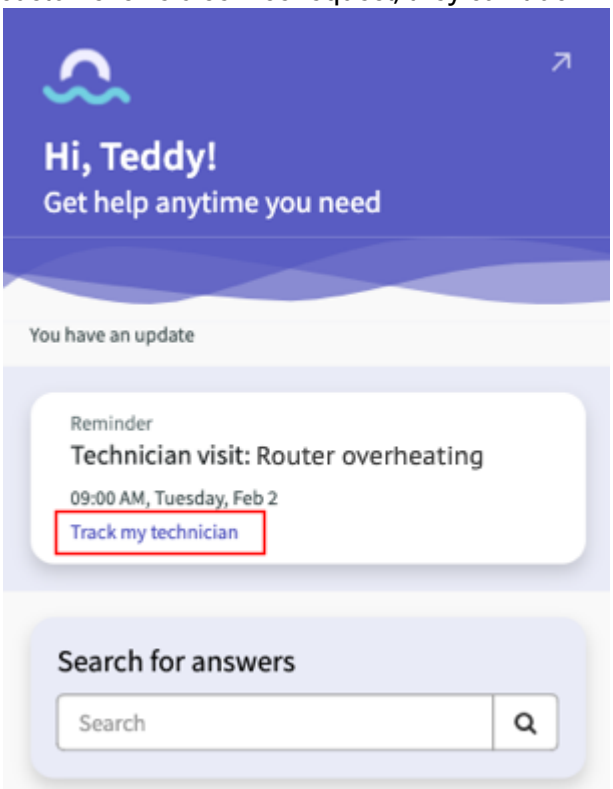
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enabling technician tracking from Engagement Messenger

When a technician is assigned to resolve your customer's field service request, they can track their technician from Engagement Messenger.



To enable this functionality, ensure that you meet the following criteria:

- Activate the Field Service Management - Customer Experience plugin (com.snc.fsm_customer_experience).
- in the sys_user table, enable the **Geolocation tracked** field for all your field service agents who would be assigned to the customer work orders.

  For more information, see Location tracking.

Walk-up feature configuration

Understand the configuration of the Walk-up feature in Engagement Messenger module to configure the field values.

To enable walk-up feature for your customers, ensure that you activate the following plugins in your ServiceNow instance:

- Walk-up for CSM plugin (com.snc.walkup_for_csm) for authenticated users
- Guest Walk-up Experience for Customer Service plugin (sn_guest_walkup_cs) for unauthenticated users

Once the plugin is active, navigate to the Features section of the guided configuration view of your Engagement Messenger module and enable the Field service feature.

Chat Setup configuration form (continued)

Field	Description
No Agent Available message	Message that appears when a live agent isn't available. The default message is `There are no agents available at the moment. Please try again later.`
Application	The application that contains this configuration record. This field is automatically set to Global.
Live chat wait status	Displays the wait time for Live Agent support in the Chat menu if **Wait Time** has been selected.

Customer Service Management roles

The Customer Service Management (CSM) application uses roles to provide access to information, identify internal and external users, maintain data security, and establish different types of relationships between users. CSM is installed with certain basic and primary roles.

Customer Service Management provides several primary roles that support the following business models:

- Business-to-business (B2B): With this business model, you can support accounts and contacts. Additionally, you can create relationships and account teams to support your customers.
- Business-to-consumer (B2C): With this business model, you can support individual consumers.

These roles ensure access to data while maintaining data security for different types of business relationships.

Besides the Base and Primary roles (that are based on the Base roles), there are Explicit roles as well. You may have business requirements that can vary how you use the roles. The Explicit roles in CSM feature lets you assign both internal and external roles to external users. It is important to regularly review user role assignments to ensure that they are set according to your business requirements.

For more information about reviewing and updating user role assignments, see:

- KB0829930
- Fix external user role assignments

To learn more about managing Customer Service Management roles, see Components installed with CSM workspaces and Components installed with additional plugins for Customer Service Management.

Service management agent [sn_esm_agent]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

None.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Service management partner [sn_esm_partner]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

sn_esm_user

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Service management user admin [sn_esm_user_admin]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

sn_esm_user

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Service management admin [sn_esm_admin]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contains Roles

List of roles contained within the role.

None.

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Service management user [sn_esm_user]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

- *snc_external*
- *sn_apptmnt_booking.appointment_booking_user*

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Service management partner admin [sn_esm_partner_admin]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

- *sn_esm_user_admin*
- *sn_esm_admin*

Groups

List of groups this role is assigned to by default.

All users.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Special considerations

For more information see Roles installed with Customer Service Management.

Role for REST APIs related to CSM web services [csm_ws_integration]

Use this Base role to access all features available within Customer Service Management. This role is available and installed with the Customer Service Base Entities plugin.

Contains Roles

List of roles contained within the role.

snc_internal

Groups

List of groups this role is assigned to by default.

All users.

Special considerations

For more information see Roles installed with Customer Service Management.

Customer service agent [sn_customerservice_agent]

Use this role to create cases, view and edit cases, and work with customers and subject matter experts to resolve cases. This role helps agents assist customers and partners with questions, issues, and problems.

Contains Roles

List of roles contained within the role.

- *knowledge*
- *chat_admin*
- *sn_customerservice.deescalation_requester*
- *timecard_user*
- *template_editor*
- *sn_esm_agent*

  Note:
  This role contains the cmdb_read role.

- *sn_shn.editor*
- *domain_expand_scope*

Groups

List of groups this role is assigned to by default.

Customer service agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Special considerations

Note:
A customer service agent typically supports a specific set of products across one or more communication channels. An agent can belong to one or more agent groups.

For more information see Roles installed with Customer Service Management.

Customer service manager [sn_customerservice_manager]

Use this role with the additional responsibility for managing agents or agent groups and overriding agent actions. A customer service agent can also use this role with the additional capability of this role.

Contains Roles

List of roles contained within the role.

- *sn_customerservice_agent*
- *timecard_manager*
- *timecard_approver*
- *skill_admin*
- *sn_app_cs_social_social_profile_user*
- *sam*
- *sn_customerservice.consumer_agent*
- *asset*
- *sn_shn.admin*
- *sn_publications.approver*
- *contract_manager*
- *sn_app_cs_social_log_user*
- *awa_manager*
- *sn_majorissue_mgt.major_issue_manager*
- *email_client_quick_message_author*
- *workspace_admin*
- *skill_model_user*
- *sn_templated_snip.template_snippet_writer*
- *approver_user*

  Note:
  For customers upgrading to Xanadu, the approver_user role replaces the approval_admin role. Users with the customer service manager role can approve the approval requests that are assigned to them.

- *notify_view*

  Note:
  The notify_view role is added to the sn_customerservice_manager role only when the Chat Zoom Connector application is installed.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Groups

List of groups this role is assigned to by default.

Customer service managers, and Customer service agents with the additional responsibility for managing agents or agent groups and overriding agent actions.

Special considerations

For more information see Roles installed with Customer Service Management.

Consumer service agent [sn_customerservice.consumer_agent]

Use this role to create cases, view and edit cases, and work with customers and subject matter experts to resolve cases. This role helps agents assist consumers with questions, issues, and problems.

Contains Roles

List of roles contained within the role.

- *sn_esm_agent*
- *chat_admin*
- *sn_shn.editor*
- *template_editor*
- *knowledge*

Groups

List of groups this role is assigned to by default.

All consumer service agents.

Special considerations

Note:
A consumer service agent typically supports a specific set of products across one or more communication channels. An agent can belong to one or more agent groups.

For more information see Roles installed with Customer Service Management.

Customer [sn_customerservice.customer]

Assign this role to customers for researching questions, issues, or problems. Customers can create cases, and view and edit existing cases. They can also view a list of assets belonging to their accounts.

Contains Roles

List of roles contained within the role.

- *sn_esm_user*
- *snc_external*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Groups

List of groups this role is assigned to by default.

All users with customer roles and access to a list of assets belonging to their accounts.

Special considerations

For more information see Roles installed with Customer Service Management.

Customer administrator [sn_customerservice.customer_admin]

Use this Administrator role for a customer account. This user has access to data within the account.

Contains Roles

List of roles contained within the role.

- *sn_customerservice.customer*
- *sn_esm_user_admin*

Groups

List of groups this role is assigned to by default.

All users with an administrator role for a customer account.

Special considerations

For more information see Roles installed with Customer Service Management.

Customer case manager [sn_customerservice.customer_case_manager]

Assign this Customer role for managing the cases in an account and any related child accounts.

Contains Roles

List of roles contained within the role.

sn_customerservice.customer

Groups

List of groups this role is assigned to by default.

All users with a case manager role for a customer account.

Special considerations

The customer case manager role includes the privileges of the customer role and adds the following privileges:

- Create a case on behalf of another contact in the account.
- View a list of cases belonging to the account.
- Edit cases belonging to the account.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The customer case manager role is not automatically added to the *sn_customerservice.contact_role_assignment* system property. To expose this role to customer and partner administrators, navigate to **Customer Service** > **Administration** > **Properties** and add it to this property.

For more information see Roles installed with Customer Service Management.

Partner [sn_customerservice.partner]

Assign this role to create a case for the partner's own account or on behalf of a customer account.

Contains Roles

List of roles contained within the role.

- *sn_customerservice.customer*
- *sn_esm_partner*

Groups

List of groups this role is assigned to by default.

All users serving customer accounts.

Special considerations

A partner can view and edit all of the cases they have created:

- For their own account.
- On behalf of customer accounts they are related to.

Note:
If you are establishing a new relationship between a partner and a customer, the partner or partner admin does not have access to historic cases created for the customer. This is because the historic cases do not have the Partner or Partner Contact fields populated on the Case form.

For more information see Roles installed with Customer Service Management.

Partner administrator [sn_customerservice.partner_admin]

Assign this administrator role to a user with a partner account.

Contains Roles

List of roles contained within the role.

- *sn_customerservice.partner*
- *sn_customerservice.customer_admin*
- *sn_esm_partner_admin*

Groups

List of groups this role is assigned to by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

All users with the admin role for a partner account.

Special considerations

The partner administrator can do the following:

- Access the data within the partner account.
- Access the data created by the contacts in their company in the customer account.
- Manage users for the partner account and for customer accounts.
- View all of the cases created by a partner.

For more information see Roles installed with Customer Service Management.

Consumer [sn_customerservice.consumersn_customerservice.consumer]

Assign this Consumer role to users for researching questions, issues, or problems.

Contains Roles

List of roles contained within the role.

- *sn_esm_user*
- *snc_external*

Groups

List of groups this role is assigned to by default.

All users with the assigned Consumer role.

Special considerations

Consumers can create cases and view and edit existing cases for products that they have purchased. They can also view a list of their products. For more information see Roles installed with Customer Service Management.

Case Type Configuration Admin [sn_csm_case_type.config_admin]

Can create, view, update and delete records in the following table: Case type [sn_case_type]

Contains Roles

List of roles contained within the role.

None.

Groups

List of groups this role is assigned to by default.

None.

Special considerations

None.

Customer Service forms

Use forms to view and update Customer Service Management information.

Customer Service forms overview

Customer Service Management provides an intuitive platform for creating and managing forms that enables you to submit requests, track issues, or interact with the support team. These forms

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

are customizable to meet the unique needs of your organization, that confirms every customer interaction is captured accurately.

With options for creating incident reports, service requests, or even feedback forms, you can enable your support agents to manage customer queries easily. By using dynamic form elements, workflows, and automatic data routing, customer service teams can streamline the support process, reduce response times, and improve customer satisfaction. Forms can be integrated into portals, emails, or other channels, giving customers multiple ways to reach out for help. Whether you're addressing a simple query or managing complex service requests, these forms help ensure that your support team is well equipped to deliver timely, effective service.

Account form

The Customer Service Management application uses the Account form to store customer account information.

For information about creating a customer account, see Configure accounts and contacts.

Customer Service Account form fields

Field	Definition
Name	The name of the company.
Number	The automatically generated account number for this customer.
Primary Contact	The name of a user who is the main contact for this company.
Parent Account	The parent account for this account. Use this field to create an Account hierarchy.
Registration Code	A unique code for this account. The customer administrator can provide this code to customers for use when requesting a login on the customer portal. The registration code provides a method for validating the customer and the company before the login request is granted. Enter an alphanumeric code in this field or click the Generate Code icon to generate a unique code. For more information about generating unique account registration codes, see the Account Registration code generation in Customer Service [KB0753505] article in the HI Knowledge Base.
Customer	Denotes this account as a customer account. **Note:** If you are creating a customer account, this field is enabled by default.
Partner	Denotes this account as a partner account. A partner can report and manage cases on behalf of customers. A partner can also be a customer. **Note:** If you are creating a partner account, this field is enabled by default.
Website	The web address for the company.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Account form fields (continued)

Field	Definition
Phone	The phone number for the company.
Street	The street address of the company.
City	The city in which the company is located.
State/ Province	The state or province in which the company is located.
Zip/Postal code	The zip code or postal code for the company.
Country	The country in which the company is located.
Notes	Any additional information about the company.
Account Code	This field stores a unique value for each account. The value is determined by the last used value, which is stored in the *com.snc.cs_base.last.generated.code.tree.path* system property. For more information, see Properties installed with Customer Service Management. **Note:** If this property is reset to the original value, the system attempts to create new accounts with account codes that are already in use, which can result in an invalid insert.

Asset form

The Asset Management application uses the Asset form to store asset information.

Field	Description
Display name	Name of the asset as it appears in the record lists. This field is automatically set when you create an asset, based on the **Asset Tag** and **Model** fields.
Model category	Model grouping of the asset. Based on the model category you select, the asset is linked to a configuration item.
Model	Specific product model of the asset.
Configuration Item	CI is automatically created when you create an asset. The name that appears in this field is based on the **Serial number** and **Model** field values. Point to the reference icon to view the configuration item details inherited from the asset record.
Quantity	Number of items this asset represents. An asset always has a quantity of one unless one or more of these points are true. • If the asset is a consumable, the quantity is unrestricted because consumables are tracked in groups. • If the asset is pre-allocated, the quantity is unrestricted when the **Model category** and **Model** values are defined and **Substate** is set to **Pre-allocated**.
General	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
All the fields aren't available for each type of asset.	
Asset tag	Alphanumeric information assigned by your organization to help track the asset.
State	Current state of the asset, such as **On order** or **In use**.
Assigned to	Person using or primarily responsible for this item. This field appears when the asset state is **In Use**.
Stockroom	Name of the stockroom. This field appears only when the state of the asset is **In stock** or **Build**.
Aisle	Aisle details of the asset within the stockroom. This field appears only when the state of the asset is **In stock** or **Build**. **Note:** This field would appear only when the Hardware Asset Management Professional plugin (com.sn_hamp) is installed.
Space	Space details of the asset within the aisle. This field appears only when the state of the asset is **In stock** or **Build**. **Note:** This field would appear only when the Hardware Asset Management Professional plugin (com.sn_hamp) is installed.
Managed by	Person who maintains the asset. This field value can be different from the person in the **Owned by** field.
Owned by	Person who has financial ownership of the asset. This field value can be different from the person in the **Managed by** field.
Parent	Parent asset of the asset. For example, a monitor or peripheral can have a workstation as their parent asset. When a parent link is defined, the fields related to assignment and state of the child assets is set to read-only and are populated based on the parent assignment and state fields. For more information, see Bundled models.
Class	Asset group, for example, base, hardware, license, or consumable.
Comments	Information about the asset that would be helpful for others to know.
Serial number	Serial number of this asset.
Substate	Current substate of the asset. The available substate settings depend on the state selected. For example, the **Retired** state contains the **Substate** options **Disposed**, **Sold**, **Donated**, and **Vendor credit**.
Location	Current physical location of the asset.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: You can set the location to a place, floor, building, or campus. When you set the location to any of the options except the campus, the Location hierarchy section is shown on the asset form. The location hierarchy shows the hierarchical relationship between the specified location and its parent locations. Also, when you set the Location field to a place and then set the *sn_itam_common.sn_enable_indoormap_for_assets* system parameter to **true** on your ServiceNow instance, a real-time location map of the asset is shown on the asset form. The Location map doesn't appear by default. To view the map, select the Location map ( ) icon on the contextual sidebar of the asset record. Location map doesn't appear for excluded assets. You can also track your asset location using the Asset Indoor map in the Asset estate view of the Hardware Asset Workspace. For more information, see Track asset location using indoor maps .
Department	Department to which the asset belongs.
Company	Company or organization to which this asset belongs.
Assigned	Date on which the asset was assigned to a user.
Installed	Date on which the asset was installed.
Location Hierarchy The Location Hierarchy section is available only for hardware, consumables,bundle, and pallet assets. This section appears only under the following conditions: • When the *sn_itam_common.sn_enable_indoormap_for_assets* system parameter is set to **true** on your ServiceNow instance • When you select any location except the campus	
Floor	Floor where the place specified in the Location field is located. **Note:** This field appears only when you select a place in the Location field and is populated automatically based on the location.
Building/ Structure	Building to which the floor belongs. **Note:** This field appears only when you select a place or floor in the Location field and is populated automatically based on the location.
Campus	Campus where the building is located. **Note:** This field appears only when you select a place, floor, or building in the Location field and is populated automatically based on the location.
Financial

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
The Financial section is available only for hardware, software entitlement, and facility assets.	
Request line	Requested item to which the asset is linked.
Invoice number	Invoice under which the asset was billed.
Cost	Price at which the asset was purchased.
Vendor	Vendor from which the asset was purchased. The assets that are automatically created from purchase orders in Procurement, the default value of the **Vendor** field is the vendor specified on the purchase order.
Opened	Date on which the requested item record was opened. The system automatically populates the field when a request line is specified.
GL account	General ledger account number with which the asset is associated.
Cost center	Group financially responsible for the asset.
Acquisition method	The way of acquiring the asset. Base system choices are **Purchase**, **Lease**, **Rental**, and **Loan**. The assets that are automatically created from purchase orders in Procurement, the default value is **Purchase**
Expenditure type	The type of expenditure. • **Capex**: Capital expenditure is a one-time expenditure, where the value is realized over the years. For example, a photocopier. • **Opex**: Operational expenditure is an on-going expenditure. For example, toners for the photocopier.
Disposal	
Disposal order number	A unique number assigned to the asset disposal order. **Note:** This field appears only if you've installed Hardware Asset Management from ServiceNow Store.
Disposal vendor	The vendor assigned to carry out the asset disposal order. **Note:** This field appears only if you've installed Hardware Asset Management from ServiceNow Store.
Vendor disposal order ID	Order number assigned by the vendor to carry out the asset disposal order. **Note:** This field appears only if you've installed Hardware Asset Management from ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Disposal date	The date when the asset disposal order process is completed. **Note:** This field appears only if you've installed Hardware Asset Management from ServiceNow Store.
Disposal reason	Text explaining why the asset is being retired.
Beneficiary	Organization that receives the asset when it's retired.
Resale price	Value of the asset when it's retired. For example, if the asset is donated, the value used when reporting taxes.
Scheduled retirement	Scheduled date on which the asset is retired.
Retired date	Actual date on which the asset was retired.
Depreciation The Depreciation section is available only for hardware and facility assets.	
Depreciation	Depreciation method that is applied. Base system choices are **Declining Balance** and **Straight Line**. The depreciation value is defaulted from the associated Model.
Depreciation effective date	Date on which the specified depreciation method begins.
Salvage value	Estimated value of an asset at the end of its useful life. This value must be less than or equal to the Cost of the asset.
Residual date	Number of days that have passed since the **Depreciation effective date**.
Residual value	Value in the Cost field with the depreciation method applied.
Depreciated amount	Amount the asset has depreciated.
Contracts The Contract section is available only for hardware, software entitlement, or facility assets.	
Lease contract	Name of the lease contract that applies to the asset.
Warranty expiration	Expiration date of the asset warranty.
Lease expiration date	Date on which the contract gets expired. **Note:** This field would appear only when Hardware Asset Management (sn_hamp) is installed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Lease term (months)	The period in months the lease contract is active for. **Note:** This field would appear only when Hardware Asset Management (sn_hamp) is installed.
Monthly lease payment	Amount that you pay monthly for the contract. **Note:** This field would appear only when Hardware Asset Management (sn_hamp) is installed.
Support group	Group managing the contract covering the asset.
Like-kind exchange	A similar asset that you want to return to the contract vendor instead of the asset that you brought in lease. **Note:** This field would appear only when Hardware Asset Management (sn_hamp) is installed.
Supported by	Person managing the contract covering the asset.
Activities	
Work notes	Work notes are updated for the following cases: • Updates to **Assigned To**, **Managed To State**, **Substate**, and **Reserved** fields of asset. The columns for these fields are audited by default and any update is recorded in the work notes. • Work notes for hardware and software assets are updated when the asset is received by a purchase order and transfer order. These work notes help in tracking the life cycle of the asset.
Audit	
Audit number	Audit number of the asset.
Audit type	Type of audit that was carried out on the asset.
Last audit date	Date on which the last audit was done.
Last audit state	State of the last audit.
Audited by	Person who performed the last audit.
Mobile The Mobile section is available only for the Mobile Device model category.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Note: This section appears only when Hardware Asset Management (sn_hamp) is installed.	
Carrier	Name of the carrier company.
Ownership	Ownership of the asset. The available values are: • Employee • Corporate
IMEI	Unique number for tracking the mobile device.
Pre-enrollment ID	User who conducted the last audit.
MAC Address	MAC address of the mobile device.
Enrollment ID	User conducting the current audit.
Phone number	Phone number associated with the mobile device.
Enrollment name	Name of the mobile device enrollment.
Platform	Platform of the mobile device. The available options are: • Android • iOS • Windows • ChromeOS • Other
Enrollment state	Current enrollment state of the device. The available options are: • Enrolled • Unenrolled • Expired • Pending enrollment • Pending unenrollment
Purchased	Date on which the mobile device was purchased.
Enrollment date	Initial enrollment date.
Upgrade eligible date	Date on which the mobile device is eligible for an upgrade.
Last enrolled	Date of last enrollment.
Service contract	Contract number associated with the mobile device.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Device activated	Activation status of the mobile device. The available options are: • Yes- The mobile device is activated. • No- The mobile device isn't activated.
Related links	
Calculate Depreciation	Select to calculate the depreciation amount and residual value.
Delete Assets Only	Select to delete the assets and not the associated CI.
Related lists	
Assets	Assets that 's related to the asset you created.
Expense lines	Expense line associated with the asset.
RMA	Return Merchandise Authorization associated with the asset.

Case form

The Case form displays detailed information about a customer issue or problem.

A customer service agent creates a case to identify a customer's question or issue and to track the activities related to resolving the issue. An agent also uses a case to track communication to and from the customer, including the communication channels being used.

Case activities include any action that is taken to resolve an issue. This can include phone calls or emails, knowledge base research, conversations with subject matter experts, and dispatch requests to field service agents, as well as other activities.

From the Case form, an agent can associate and store the related information, such as the customer's name, phone number, and company; account information; product and asset information; service contract and entitlement details, and any associated service level agreements (SLAs).

There are several key features to a case.

- Communication between an agent and the customer or an agent and other employees within the organization. Details of all internal and external communication are recorded on the Case form.
- Any additional tasks that result from a case, such as a work order. Tasks are tracked from a related list on the Case form. These tasks may be internal to the organization or they may involve the customer.
- Information from the case that can be included in the knowledge base and used to help resolve other cases.

There are two different Case form views: a detailed view that is available to agents and agent managers in the Customer Service Management application and a simplified view that is available to external customers from the Customer and Consumer Service Portals.

Agent view

The agent view of the Case form includes the following components:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A timeline that provides a visual display of case activities.
- Referenced entities for the case including account and contact information, product and asset information, service contract and service entitlement details, and any pertinent SLAs. Except for SLAs, this information exists in the system and can be associated with the case by the agent or agent manager.
- All communication about the case, both external and internal. This information is stored in the **Additional comments** field (external communication), the **Work notes** field (internal communication), the **Resolution notes** field. The **Resolution notes** field stores details about the case resolution, and the **Activity** field, which stores all communication in a chronological list.

Agents and managers can view a Case form by navigating to **Customer Support** > **Cases** and selecting one of the following menu options:

- **My Cases**
- **All**
- **Open**
- **Unassigned**

From the Case list, select a case number to display the Case form.

Customer Service Case form (agent view)

Field	Description
Number	Automatically assigned case number.
Channel	Method by which the customer initiated contact and the case was opened. • Web (default) • Phone • Email • Chat • Social
Contact Local Time	Local time of the contact assigned to the case. This is automatically filled according to the time zone set on the Contact form. If no time zone is set on the Contact form, it is filled according to the **Contact Timezone** set on the case itself. If no time zone is set on the Contact form or in the Case form, the field is left blank and is read-only. If a case is closed or canceled, the **Contact Local Time** field is hidden. **Note:** Configure the form layout to add this field to the Case form.
Contact time zone	Contact time zone if the customer is working in a different time zone for the case. This field overrides the Contact form time zone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Case form (agent view) (continued)

Field	Description
	If no contact local time or contact time zone is set, the instance time zone is displayed. After the case is created, the field is read-only. **Note:** Configure the form layout to add this field to the Case form.
Account	Name of the contact's company. This field is filled in automatically if the information is available in the contact record.
Contact	Name of the customer contact for this case.
Consumer	Name of the consumer for this case.
Service Organization	Name of business location.
Requesting Service Organization	Service organization for which this case is being requested.
Product	Product model of the asset. A model is a specific version or configuration of an asset (for example, Apple Mac Book Pro). If you select an asset in the **Asset** field and the asset has an associated product, the **Product** field is automatically updated. A product can be associated with multiple assets.
Asset	Asset tag number or the serial number of the asset involved in this case.
Install base	The Install base field helps you track which products and services have been purchased by a customer, how they have been installed or provisioned, along with the detailed configuration for each installed item.
Partner Contact	Name of the partner contact for this case.
Follow the sun	Option to indicate that a case should be handed-off for global follow-up. If a customer enters additional comments on a **Priority 1 - Critical** or a**Priority 2 - High** case, or if the case is escalated, the flag is automatically selected. The activity stream on the case form is updated with any changes. **Note:** Enable the **Follow the sun** check box on the Customer Service case form by setting the value of the property *sn_customerservice.FTS_flag_enabled* to **true**. Configure the form layout to add this field to the Case form.
Short description	Brief description of the issue or problem.
Opened	Date and time that the case was opened.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Case form (agent view) (continued)

Field	Description
Priority	The assigned priority: • 1 — Critical • 2 — High • 3 — Moderate • 4 — Low (default)
State	Customer service case states: • New • Open • Awaiting Info • Resolved • Closed • Canceled **Note:** Configure the form layout to add this field to the Case form
Assignment group	Assigned customer service agent group.
Assigned to	Assigned agent. If a group is selected in the **Assignment group** field, the assigned agent must belong to this group.
Assigned on	Date and time when the case is assigned. This field is updated when a user is added or changed in the **Assigned to** field.
Contract	Contract number associated with this case.
Entitlement	Entitlement associated with this case. The entitlements available for selection in the reference list channel matches the case creation channel. The available entitlements are filtered by the settings in the **Account**, **Consumer**, and **Contract** fields. If only one entitlement is available for this case, it is automatically added to the **Entitlement** field. Starting with the Zurich release, agents can add multiple entitlements to a case. If the *sn_customerservice.advanced_entitlements* system property is set to true, the Case Entitlements related list is visible on the Case form and the **Entitlement** field is hidden. For more information, see the following topics: • Add an entitlement to a case • Properties installed with Customer Service Management
Partner	Name of the partner company.
Notes

Customer Service Case form (agent view) (continued)

Field	Description
Watch list	Users who receive notifications about this case when additional comments are added or if the state of a case is changed to **Resolved** or **Closed**. Select the add me icon to add yourself to the watch list.
Work notes list	Internal users who receive a notification about this case when work notes are added. You can only add internal users to the work notes list. Select the add me icon to add yourself to the work notes list. To enable notifications for users in the **Work notes list** field: **1.** Navigate to the Notifications (sys_notification) table. **2.** Select Case Action Status. **3.** In the **Who will receive** tab, do one of the following: ○ Add a user in the **Users** field. ○ In the **Recipients listed in fields** field, add the **Work notes list** field. **4.** Select **Update**.
Contributor Users	When a user with the case task agent role (sn_customerservice.case_task_agent) is assigned to a case task, the user is added to the **Contributor Users** field. If this user is removed from the **Assigned to** field on the Case Task form, and they are not assigned to any other tasks for the case, thenn they are also removed from the **Contributor Users** field.
Contributor Groups	When a user with the case task agent role (sn_customerservice.case_task_agent) is assigned to a case task, the user's assignment group is added to the **Contributor Groups** field. If this user is removed from the **Assigned to** field on the Case Task form, and no other member of their assignment group is assigned to any other tasks for the case, then the assignment group is removed from the **Contributor Groups** field. If a group is removed from the **Assignment group** field on the Case Task form, and the group is not assigned to any other tasks for the case, then the assignment group is removed from the **Contributor Groups** field.
Additional comments	Customer-viewable comments. Each comment is inserted into the **Activity** field when the user selects the **Post** button.
Work notes	Information about how to resolve the case, or steps taken to resolve it, if applicable. Internal users who have been added to the Work notes list receive the Case work notes added notification containing the work notes when added. You can configure the notification, as required. The notes are viewable by the admin, agent, and agent manager.
Activities	Records all activity associated with this case.

Customer Service Case form (agent view) (continued)

Field	Description
Resolution Information	
Resolved by	Agent to whom the case is assigned when the case is resolved.
Closed by	Name of the user who closed the case.
Resolution Code	Choice list indicating the resolution states for the case. This field is mandatory when an agent proposes a solution for a case.
Cause	Details about the cause of the resolution.
Resolution notes	Details about how the case was closed. This field is mandatory if a customer service agent or agent manager closes a case. If a customer closes a case, it is not mandatory.
Add resolution notes to comments	Option to determine if the resolution notes are added to customer-viewable comments when the case is resolved. If selected, the resolution notes are added to the **Additional comments** (customer-visible) field.
Resolved	Date and time that the case was resolved.
Closed	Date and time that the case was closed.

Customer view

Customers can view a Case form by selecting **My Cases** on the customer portal and then selecting a case number from their Case list.

The customer view of the Case form includes the following components:

- A process flow formatter that indicates the current state of the case.
- The related entity information, including account and contact information, product and asset information, and service contract information.
- An **Activity** field that stores all communication for the case in a chronological list.

Case process flow formatter

The process flow formatter provides a graphical summary of the stages of a customer service case.

The process flow formatter is available in the platform interface when you select the Customer Self Service view.

Process flow formatter

The process flow formatter appears at the top of the Case form. It highlights the current state of the case and checks off the states through which the case has passed.

By default, the process flow formatter displays the following states:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- New
- Open
- Resolved
- Closed

Related topics

Process flow formatter

Case form related lists

The Case form includes related lists that store case information and that agents can use to perform case-related tasks.

Customer service case form related lists

Related List	Description
SLAs	The service level agreements that are associated with this case.
Tasks	Tasks that have been created for this case by the customer service agent or agent manager. When you create a task or change the state of a task, the information is recorded in the case **Activity** field. When you create a case task, the system generates a task number with a prefix. Following upgrade to the New York release: • New case tasks use the CSTASK prefix. • Existing tasks, regardless of state, use the TASK prefix.
Phone	The case phone log. A list of incoming or outgoing phone calls associated with this case.
Appointments	Appointments that the customer service agent makes with the customer or others as part of resolving this case. When you create an appointment, an appointment creation message is recorded in the case **Activity** field. The user selected in the **To** field on the appointment form receives an email with the appointment details.
Emails	The case email log. A list of the emails that are sent or received as part of resolving this case. The customer service agent or agent manager can send email from within the case, such as updates and inquiries to customers or other employees. A change in the state of the case triggers an automatic email to be sent to the customer. Customer contacts can create and update cases by email as well as receive updates from customer service agents.
Problems	A list of problems related to this case.
Work Orders	A list of work orders created for this case.
Social Logs	A list of the communication with customers or consumers that takes place through social media channels. The Social Log form includes the **Social Profile** of the user that created the communication and the **Social URL** for the conversation. Click the URL to open the conversation in a new tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer service case form related lists (continued)

Related List	Description
Attached Knowledge	Knowledge articles attached as a proposed solution to the case.
Knowledge Gaps	Feedback tasks that are created when a knowledge gap is reported.
Escalations	A list of escalation records that are related to this case.
Child Cases	A list of child cases associated with this case
Requests	A list of requests associated with this case.
Blocked by	A list of blocking tasks that have been created for this case.
Related Parties	A list of related parties, such as contacts or consumers added to the case.

Case states

A customer service case can be in one of several states as the agent gathers information and works toward a resolution.

Customer service case states

Term	Definition
New	The initial state for a new case, which is created through any one of the channels: customer portal, email, chat, telephone, or from the Customer Service application. Actions the agent can take: • **Assign to me**: The case is assigned to the agent and the state changes to **Open**. • **Accept**: If assigned by the customer service manager, the agent accepts the case and the state changes to **Open**. • **Update**: updates the case. • **Close Case**: Closes the case. • **Delete**: Deletes the case. Actions the customer can take: • **Update**: updates the case. • **Close Case**: Closes the case
Open	The case is assigned to an agent and the agent clicks **Accept** or an agent opens a case and clicks **Assign to me**. Both of these actions change the state from **New** to **Open**. Actions the agent can take: • **Update**: Updates the case. • **Request Info**: The agent requests additional information from the customer. The state changes to **Awaiting Info**. • **Propose Solution**: The agent proposes a solution for the case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer service case states (continued)

Term	Definition
	Note: The **Resolution Code** and **Resolution notes** must be entered in the **Resolution Information** tab. The state changes to **Resolved**. • **Close Case**: Closes the case. • **Delete**: Deletes the case.
Awaiting Info	An agent clicks **Request Info**, changing the state from **Open** to **Awaiting Info**. Actions the agent can take: • **Open Case**: Changes the state back to **Open**. • **Update**: Updates the case • **Close Case**: Closes the case. • **Delete**: Deletes the case. Actions the customer can take: • **Update**: Once the customer updates the case, the state changes to **Open**. • **Close Case**: Closes the case.
Resolved	An agent provides a resolution code and enters resolution notes in the**Resolution Information** tab and clicks **Propose Solution**, changing the state from **Awaiting Info** to **Resolved**. The **Resolution code** and **Resolution notes** fields are mandatory when an agent proposes a solution for the case. Actions the agent can take: **Update** (Updates the case) Actions the customer can take: • **Accept Solution**: The customer accepts the solution proposed by the agent. The state changes to **Closed** and a survey is displayed. • **Reject Solution**: The customer rejects the solution proposed by the agent and the state changes to **Open**. • **Delete**: Deletes the case. • **Close Case**: Closes the case.
Closed	After proposing a solution, an agent waits for the customer to respond. • If the customer clicks **Accept Solution**, the state changes from **Resolved** to **Closed**. • If the customer clicks **Reject Solution**, the state changes from **Resolved** to **Open**. An agent, agent manager, or a customer can close a case at any time, except when it is in the **Resolved** state. When it is in the **Resolved** state, only a customer can accept or reject the proposed solution. When an agent or agent manager closes a case, details must be included in the **Resolution notes**. This is not required when a customer closes a case.

State flows

Create a case for a new install base item

Create a case for a new install base item by using the case form in the CSM Agent Workspace.

Before you begin

Role required: sn_customerservice_agent or sn_customerservice.consumer_agent

Procedure

1. Navigate to **All** > **Workspaces** > **CSM/FSM Configurable Workspace**.
2. In the list view, navigate to **Cases** > **My Cases**.
3. Select **New**.
4. Perform one of the following actions before selecting an install base item on the Create Case form.
   For a description of the field values, see Case task form.
5. Next to the **Install Base** field, select the search icon , and then select the install bases from the pop-up window.

   The pop-up window displays only the list of install base items that are related to the selected account or consumer.
6. In the **Short Description** field, enter a description of the install base item.
7. Save the form.
   A new case with the install base item details appears in the My cases list.

Migrating the install base information for existing cases

Your customer service agents can use the case form on the CSM Agent Workspace to add an install base item to an existing case.

To populate existing cases with the install base information, agents can use the following sample script:

```
var installBaseMigrationUtil = new
 sn_install_base.InstallBaseMigrationUtils();
installBaseMigrationUtil.populateInstallBaseOnCases();
```

The migration script populates cases with the install base information, only if the case is associated with the install base item. To associate a case to an install base item, see Associate multiple Install base items to a case.

Assign a partner contact on the case form

Enable Customer Service Management agents to assign partner contacts for an account that is associated to an install base item on the case form. By adding partner contacts, you can provide access to multiple partners to access their accounts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: customer service agent

Procedure
1. Navigate to **CSM/FSM Configurable Workspace** > **Cases** > **My Cases**.
2. Select **New**.
3. In the **Install Base** field, use the search icon to add an install base item on the Create Case form.
   The **Account** and **Contact** fields are automatically filled from the install base form. For a description of the field values, see Case task form.
4. In the **Partner** field, use the search icon to search for a partner associated with the selected account.
   The partner in the **Partner** field is the partner account that is associated with the account.
5. In the **Partner Contact** field, enter an eligible partner contact who has the following criteria:
   - All partner contacts of the partner account are eligible if the **Restrict Account Access** isn't enabled.
   - All partner contacts with the partner admin role are eligible if **Restrict Account Access** is enabled.
   - Partner contacts that are added as an Authorized Representative through the related party list for the install base item.
   - Partner contacts that are added as an Authorized Account through the related party list for the install base item.

   To add a related party to an install base item, see Add related parties to an install base item.
6. Select **Submit**.

Result
A partner contact is assigned to the case.

Case line item form

The case line item form displays details about a case line item on a case record.

Agents can use the case line item form to create a new case line item record and to view and edit an existing case line item record. When editing, agents can:

- Change the reason code
- Change the Priority, Assigned to, and Contact

To access a case line item record, navigate to **All** > **Customer Service** > **Cases** > **All Line Items** and select a record. Users with the following roles can access this list: system administrator, customer service agent, and customer service manager.

The case line item form includes the following related lists:

- Case Line Tasks
- Case Line Characteristics

Case line item form fields

Field	Description
Number	The automatically generated record number. The prefix for numbers from the Case Line table is **CSL**.
Parent case	The parent case for the case line item record. This field is mandatory.
Parent case line	The parent case line for the case line item record. This field supports the case lines hierarchy.
Top case line	The top case line for the case line item record. This field supports the case lines hierarchy.
Account	The name of the company that the case is opened for.
Contact	The name of the customer contact for the case.
Product offering	This field is a reference to the Product Offering table [sn_prd_pm_product_offering].
Product specification	This field is a reference to the Product Specification table [sn_prd_pm_product_specification].
Product model	This field is a reference to the Product Model table [cmdb_model].
Short description	A brief description of the case line item record.
State	A case line item record can be in any of the following states: • Draft • New • Work in Progress • Awaiting Info • Resolved - Accepted • Resolved - Denied • Canceled If all of the case line items on a record are in one of the following terminal states, the system syncs the record state to the case line item state: • Resolved - Accepted • Resolved - Denied • Canceled Actions such as **Submit Case** and **Assign to me** change the state of the case and the case lines.
Priority	The priority of the case line record: • 1 - Critical • 2 - High • 3 - Moderate

Case line item form fields (continued)

Field	Description
	• 4 - Low • 5 - Planning
Assigned to	The agent assigned to the case line item record.
Request reason code	The reason for the requested change. Can be different for each case line item. • Increase Demand • Change in Contract • Initial input incorrect • None
Sold product	This field is a reference to the Sold Product table [sn_install_base_sold_product].
Install base	This field is a reference to the Install Base Item table [sn_install_base_item]. If the **Account** field is populated, this field displays the install base items for the selected account.
Asset	This field is a reference to the Asset table [asset]. If the **Account** field is populated, this field displays the assets for the selected account. If the **Product model** field is populated, this field displays the assets associated to the selected product model. If both the **Account** and **Product model** fields are populated, this field displays the assets associated with selected account and product model.
Resolution code	A code that indicates the resolution state of the case line item record. • Change approved • Added replacement product
Resolution Notes	The agent can use this field to specify how they reached the decision to either accept or deny a change to a case line item.
Contributor Users	This field is populated when a case line task is assigned to a case task agent.
Contributor Groups	This field is populated when a case line task is assigned to a case task agent.
Work notes	Enables users to post work notes to the record.

Case line task form

The case line task form displays details about a case line task associated with a case line item on a case record.

Case line task form fields

Field	Description
Number	The automatically generated record number. The prefix for numbers from the Case Line Task table is CSLTASK.
Parent case	The parent case of the case line item.
Account	The name of the company that the parent case is opened for.
Contact	The name of the customer contact for the parent case.
Case line	The number of the case line item that the task is created for.
State	The state of the case line task: • Open • Closed
Priority	The priority of the case line task: • 1 - Critical • 2 - High • 3 - Moderate • 4 - Low
Assignment group	The assigned customer service agent group.
Assigned to	The agent assigned to the case line task.
Subject	The subject of the case line task.
Description	A longer, more detailed description of the case line task.
Work notes list	A list of users who are interested in the case task. These users receive a notification when work notes are added to the case task.
Work notes	Information about the case task and the steps taken to resolve it. Work notes are posted to the activity stream and are visible only to internal users.
Additional comments	Customer-viewable comments and information about the case task. Additional comments are posted to the activity stream.

Case line characteristic form

The case line characteristic form displays details about the product offering included in a case line item.

Case line characteristic form fields

Field	Description
Number	The automatically generated record number. The prefix for numbers from the Case Line Characteristics table is **CSLC**.
Case line	The case line item that this characteristic belongs to. This field is a reference to the Case Line table.
Characteristic	This field is a reference to the Characteristic table [sn_prd_pm_characteristic].
Characteristic option	This field is a reference to the Characteristic Option table [sn_prd_pm_characteristic_option].
Characteristic value	The value of a characteristic.

Case line entitlement form

The case line entitlement form displays information about an entitlement associated with a case line item.

Case line entitlement form fields

Field	Description
Case line	The case line that the entitlement is associated with.
Entitlement	The selected entitlement.
Domain	The domain that the entitlement belongs to.

Case Report form

The Case Report form includes reporting-related fields that are derived from case records.

The Case Report table (sn_customerservice_case_report) extends from the Customer Service Case table (sn_customerservice_case). This table stores KPIs and metrics for case records and includes the following calculated metrics which are displayed on the Customer Service Manager dashboard.

- Agent Reassignment Count
- First Contact Resolution
- Reopen Count

The Customer Service Manager dashboard includes the **First Call Resolution** indicator, which shows the percentage of cases that were resolved during the first contact with the customer. The percent change in the current period appears under the total percentage. The value for the First Call Resolution indicator is returned by the *`CaseReportUtils`* script include.

Customer Service Case Report form fields

Field	Definition
Number	The automatically generated case report number.
First Contact Resolution	Records whether a case was resolved during a customer's first contact with an agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Case Report form fields (continued)

Field	Definition
	This field can have one of the following values: • 0: None (default value) • 1: True • 2: False For more information about how this field is calculated, see First Call Resolution (FCR) metric below.
Agent Reassignment Count	The number of times that a case has been reassigned to a different agent. The default value is 0.
Reopen Count	The number of times a case has been closed and reopened. The default value is 0.
Skipped by Prediction	Used to identify cases that are skipped by the Predictive Intelligence feature. The default value is false (disabled).
Case	The case for which this case report was generated.
Customer Satisfaction Score	The customer gives the customer satisfaction score on accepting the case resolution.
Time to Resolve	Time taken by an agent to resolve the case. Calculated as the difference between the case resolved time and case created time.

First Call Resolution (FCR) metric

The First Call Resolution (FCR) metric relates to the number of times that a customer request is resolved during the first contact with an agent. Out of box, the First Call Resolution script returns a value of true or false.

FCR is true if a record has one update. For example, if the state of a new case is set to Closed and then updated or saved, the FCR value is True.

FCR is false if:

- A case is reopened.
- The state of a case is updated to Awaiting Info.
- An Openframe phone record exists for the case and the date of that record is prior to the case resolution date.
- An email log exists for the case, the email was not created by the system, and the email creation date is prior to the case resolution date.
- A work order entry exists for the case and the date of that work order is prior to the case resolution date.

Case task form

The case task form displays information about case tasks, which are created and assigned to users to complete the work necessary to resolve customer service cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The case task form includes the following fields.

Case task form fields

Field	Description
Number	The automatically assigned case task number.
Parent case	The number of the parent case. This can be a case from the Case [sn_customerservice_case] table or any child tables of the Case table.
Parent	The number of the parent record if the task is created from a type of record other than a case. This field is populated when a case task is created from a non-case record such as an incident, problem, change, or request. This field is a reference to the Task [task] table. **Note:** You may need to configure the case task record to display the **Parent** field.
Contact	The contact for the parent case. This field is a reference to the Contact [customer_contact] table.
Account	The account for the parent case. This field is a reference to the Account [customer_account] table.
Consumer	The consumer for the parent case. This field is a reference to the Consumer [csm_consumer] table.
Subject	The subject of the case task.
Description	A description of the work that needs to be done in order to complete the case task.
Service	If a service has been selected for a case task, the service is displayed in this field. The **Service** field is a reference to the Service Definitions table (sn_case_type_selection). **Note:** The Customer Service plugin (com.sn_customerservice) and the Customer Service Case Types plugin (com.snc.csm_case_types) are required for the **Service** field to appear on case task lists and forms.
Priority	The assigned priority of the case task: • 1 - Critical • 2 - High • 3 - Moderate • 4 - Low (default)
State	The current state of the case task:

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case task form fields (continued)

Field	Description
	• Open • Closed
Assigned to	The assigned user.
Service	This field is a reference to the Service [cmdb_ci_service] table.
Work notes list	Internal users who receive a notification about this case when work notes are added. You can only add internal users to the work notes list.
Work notes	Information about the case task, such as steps taken toward resolution. Internal users who have been added to the **Work notes list** receive a notification when work notes are added to a case task.
Additional comments	Customer-viewable comments. Each comment is inserted into the **Activity** field when the user selects **Post**.
Visible to customer	If this check box is enabled, the case task is visible to end users from the Customer or Consumer Portals.

Case Type form

Use the Case Type form to manage the settings for a case type.

To access a Case Type form, navigate to **Customer Service** > **Case Types** > **Manage Case Types** and select a case type from the list.

Customer Service Case Type form fields

Field	Definition
Table	The table for the case type that extends the Case table (sn_customerservice_case).
Category	An optional category for a case type. When creating cases, customer service agents can filter the available case types by category in the Select Case Type popup window. The Customer Service Case Types plugin (com.snc.csm_case_types) includes the following categories: • Onboarding • Complaint • Orders • General
Subtype	An optional sub-category for a case type. When creating cases, customer service agents can filter the available case types by category and then by subtype in the Select Case Type popup window.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customer Service Case Type form fields (continued)

Field	Definition
	The **Subtype** field displays fields from the selected **Table** that are of the following type: • Choice list • Reference
Short description	A brief description of the case type.

Related links

The Case Type form includes the following related links:

- **View Case Type Configuration**: View the current configuration for this case type table.
- **Launch Guided Setup for Case Types**: Go to the Case Types setup tasks in Customer Service Guided Setup.
- **Launch Guided Setup for AWA**: Go to the Advanced Work Assignment (AWA) setup tasks in Agent Workspace Guided Setup.
- **Launch Guided Setup for Agent Workspace**: Go to the Agent Workspace for CSM setup tasks in CSM Guided Setup.

Contact Relationship form

The Customer Service Management application uses the Contact Relationship form to store information about the account, contact, and assigned responsibility in a contact relationship.

Contact Relationship form fields

Field	Definition
Account	The account to which the contact is assigned. This field is automatically filled in.
Contact	The customer contact selected to fulfill the role or responsibility.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Relationship form fields (continued)

Field	Definition
	The Contacts list includes contacts from any related partner or account as well as contacts from the account hierarchy.
Responsibility	The role or responsibility selected for this customer contact. **Note:** As part of creating a responsibility definition, the admin can specify if the responsibility is unique. If so, the responsibility can only be assigned to one contact per account. For more information, see Create account teams.

External Business Location form

In the Customer Service Management (CSM) application, the Service Model Foundation uses the External Business Location (EBL) form to store information about an external business location. This information includes the staff members assigned to that location, cases, sold products, and install base items created for customers.

External Business Location form fields

Field	Definition
Number	Automatically generated number of the external business location. By default, location numbers start with the prefix EBL.
Name	Name of the external business location.
Type	Type of organization. Select any one of the following: • Business location: Physical location of a business where a business operates • Business group: An organization that might also consist of a collection of parent and child companies operating as a single entity.
Business function	Type of functions offered at a business location. Select the following business function: • Service: Select this type if a business location provides service-related functions, such as providing support, or resolving cases for accounts, consumers, or other business locations. • Sales: Select this type if a business location provides sales-related activities, such as creating or managing orders, generating quotes, handling opportunities or leads, managing pricing, offering product recommendations, or supporting account-

External Business Location form fields (continued)

Field	Definition
	based selling for accounts, consumers, or other business locations. • Service and Sales: Select both service and sales if the business location is providing both service-related and sales-related activities. **Note:** You can create and manage orders and cases by selecting both types of business functions.
Manager	Manager of the external business location. **Note:** Both internal and external users can be added as managers for external business locations.
Parent Business Location	Parent of the business location. Use this field to create a parent-child hierarchy.
Street	Street address of the external business location.
City	City where the external business location is located.
State/Province	State or province where the external business location is located.
ZIP/Postal code	ZIP code or postal code for the external business location.
Customers served	Types of customers who are served at a business location. Customers served can be defined using two options: • **All Customers**: Enables service organization staff to create and resolve issues for all the customers. • **Criteria-based**: Enables service organization staff to create and resolve issues only for customers associated with the service organization using a criteria. Associate a channel partner to add roles in the Service Organization tab.
Website	Web address for the internal business location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

External Business Location form fields (continued)

Field	Definition
Email	Email ID used by the internal business location.
Phone	Phone number for the internal business location.
Open date	Date on which the business location becomes operational and available for customers.
Close date	Date on which the business location becomes non-operational and unavailable for customers. **Note:** The closed date must not be earlier than the open date.
Status	Current status of the business location whether In progress, Operational, non-operational, or closed.
Description	Description of the business location.

External business location related lists

The External Business Location form includes the following related lists.

Related lists for the External Business Location form

Related list	Description
Members	Internal and external users who have been added as staff members at this business location. • Staff members can create cases for customers at their business locations. • Staff members can access customer cases and information where the **Service Organization** field on the Case form matches their business locations. For more information about adding staff members to an external business location, see Add staff members to a business location.
Child External Business Locations	List of external business location records. For more information about creating external business locations, see Create an external business location.
Assignment Groups	List of all associated assigned groups of the internal business location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related lists for the External Business Location form (continued)

Related list	Description
	For more information, see Setting up assignment groups.
Available Services	List of services supported by the business location. For more information, see Setting up products and available services at a business location.
Customer Projects	List of all projects assigned to the business location. Select a project to see **Project Tasks**, **Sub Projects**, and **Cases** assigned to the project. **Note:** • A location manager can see projects of their respective and child business locations. To learn more about roles, see Service Model Foundation roles. • A list of project tasks under the customer project tab is visible only if the **Visible to Customer** is selected during project task creation. To learn more about project creation, see Create customer projects. To learn more about project task creation, see Create a project task from a project.
Service Organization Customer Criteria	List of customers supported by an external business location. For more information about associating customer criteria to an external business location, see Define the configuration type for customers or business locations.
Cases Requested by Location	Cases that have been created and requested by this location. For more information about assigning cases to an external business location, see Create and manage cases for a business location.
Cases Assigned to Location	Cases that have been created and assigned to this location. For more information about creating and managing cases, see Create and manage cases for a business location.

Household form

Service Model Foundation uses the household form to store details about a consumer household, including its members, their relationships, and any cases, entitlements, or contracts associated with them.

Household form fields

Field	Definition
Name	The name of the household.
Number	The automatically generated number of the household. By default, household numbers start with the prefix HOLD.
Head of household	The consumer in charge of the household. • When creating a household record, select a consumer from the Consumer table. • When updating an existing household record, select a consumer from the current members of the household.
Street	The street address of the household.
City	The city in which the household resides.
State/ Province	The state or province in which the household resides.
ZIP/Postal code	The ZIP code or postal code for the household.
Country	The country in which the household resides.
Notes	Additional information about the household.

Household related lists

The Household form includes the following related lists.

Household form related lists

Related list	Description
Current Members	The consumers who are current members of the household.
All Members	Current and past members of a household. As members are added or removed from a household, the member history is retained in this related list.
Member Relationships	Relationships that have been created between members of this household. Member relationships are created using the Authorized Representative responsibility.

Internal Business Location form

In the Customer Service Management (CSM) application, the Service Model Foundation uses the Internal Business Location (IBL) form to store information about an internal business location. This information includes the staff members assigned to that location, cases, sold products, and install base items created for customers.

Internal Business Location form fields

Field	Definition
Number	Automatically generated number of the internal business location. By default, the location numbers start with the prefix IBL.
Name	Name of the internal business location.
Type	Type of organization. Select any one of the following: • Business location: Physical location of a business where a business operates • Business group: An organization that might also consist of a collection of parent and child companies operating as a single entity.
Business function	Type of functions offered at a business location. Select the following business function: • Service: Select this type if a business location provides service-related functions, such as providing support, or resolving cases for accounts, consumers, or other business locations. • Sales: Select this type if a business location provides sales-related activities, such as creating or managing orders, generating quotes, handling opportunities

Field	Definition
	or leads, managing pricing, offering product recommendations, or supporting account-based selling for accounts, consumers, or other business locations. • Service and Sales: Select both service and sales if the business location is providing both service-related and sales-related activities. **Note:** You can create and manage orders and cases by selecting both types of business functions.
Manager	Manager of the internal business location. **Note:** Only internal users can be added as managers for the internal business locations.
Parent Internal Business Location	Parent of the business location. Use this field to create a parent-child hierarchy.
Street	Street address of the internal business location.
City	City where the internal business location is located.
State/ Province	State or province where the internal business location is located.
ZIP/Postal code	ZIP code or postal code for the internal business location.
Customers served	Type of customers who are served at a business location. The customers served can be defined with two options: • **All Customers**: Enables service organization staff to create and resolve issues for all the customers. • **Criteria-based**: Enables service organization staff to create and resolve issues only for customers associated with the service organization using certain criteria. Associate a channel partner to add roles in the Service Organization tab.
Website	Web address for the internal business location.
Email	Email ID used by the internal business location.
Phone	Phone number for the internal business location.
Open date	Date on which the business location becomes operational and available for customers.
Close date	Date on which the business location becomes non-operational and unavailable for customers.

Queue registration form for recommendation process

The Recommended Actions use the queue registration form to create queues for recommendation process.

Queue Registration form

Field	Description
Suffix	Suffix of the queue. For example, ra_processor_queue_1.
Application	Associated application name or identifier.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Queue Registration form (continued)

Field	Description
Queue	Title of the selected queue. For example, sn_nb_action.ra_processor_queue_1.
Automatic Job Scheduling	Option to enable the automated job schedule for the queue.
Event Processing Order	Sequence in which events are processed.
Job Configuration type	Definition of how jobs are configured or processed.
Scale Factor	Number of polling jobs created for a particular queue. **Note:** Each application node gets a job and an order according to queue. The customer can increase the value up to a maximum of 3. Increasing the scale factor creates more polling jobs according to application node for that queue. For configuring queues, Only one queue with two scale factor and a 5-second poll interval is shipped out of the base system. For a higher load, adjust scale factors accordingly.
Poll Interval	The poll interval is the waiting time before the queue is processed. It determines how often the queue is polled, that is, how frequently new events are fetched. Decreasing the value to a lower number might cause acquiring most of the worker threads. Those threads are picked for RA use-case and can cause delays to other tasks on the instance. The poll interval displays the duration in: • **Days**: Shows the number of days the queue has been added. • **Hours:** Indicates the duration (in seconds, minutes, or hours) that an event has been in the queue once added.
Description	Additional details about the queue.

Service Definition form

In the Customer Service Management (CSM) application, the Service Definition form displays information about a service definition configuration. This information record stores the details about a service that is provided to customers.

Service Definition form

Field	Description
Number (deprecated)	The unique number of the service definition record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Definition form (continued)

Field	Description
	Note: Starting with the Washington DC release, this field has been replaced with the **ID** field.
Name	The name of the service definition.
ID	The ID of the service definition. The system auto-populates the **ID** field with the name of the service definition and replaces the spaces with underscores. The ID can contain alphanumeric characters and underscores and can be up to 40 characters in length. **Note:** The value in this field must be unique.
Table	The table that the service definition is available for, either the Case table or a table that extends the case table. For example, if the service is available for the onboarding case type, select the Onboarding Case [sn_onboarding_case] table.
Customer service type	The type of service: • Pre-sale • Post-sale • General A service type enables the system to display services based on the context.
Playbook record generator	The playbook record generator associated with the service definition. If a service definition has an associated playbook, the agent can use the playbook in a tab on the case record. For more information, see Associate a playbook with a service definition.
Image	The image associated with the service definition. Service definitions appear in the case type selector or case task type selector in a card view. The image appears in the card for a service definition along with the name and description.
Order	This value determines the order in which the services are displayed in the case type selector or other workflows. Service definitions with the lowest order value are displayed first. The default value is 100.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Definition form (continued)

Field	Description
	• Service definitions with no order value appear above the ordered service definitions. • If one or more service definitions have the same order value, the system displays the service definitions in alphabetical order.
Active	Enables the service definition.
Use service catalog item	This check box enables the admin to specify the service definitions that launch record producers.
Description	The description of the service definition. Service definitions appear in the case type selector in a card view. The card includes the name, description, and image for a service definition. Customer service agents can search for services by entering keywords found in the service definition name and description.
Default table field values	One or more fields and default values from the target table (the table that you selected in the **Table** field). When a record is created for the target table for service definitions, the system uses these values to automatically fill in the record fields.

After creating and saving a service definition, the following related lists are available on the Service Definition form:

- Product Service Relationships
- Catalog Service Relationships
- Service to Service Relationships
- Service Definition Category Relationships
- Reports

Sold product form

Descriptions of the fields on the sold product form.

Sold Product

Field	Description
Name	Name of the product or service sold.
Parent Sold Product	Parent of the sold product, if applicable.
Account	Account that is associated with the sold product.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sold Product (continued)

Field	Description
	Note: If you select an account, the **Household**, **Service Organization**, and **Consumer** fields are hidden. The **Consumer** field is active only when the B2B2C plugin is installed.
Billing account	Enables direct reference to the associated Billing Account on the Sold Product entity within ServiceNow® CRM allowing agents to access financial information instantly during service delivery.
Contact	Contact that is primarily responsible for the sold product. **Note:** Only the contacts that belong to the chosen account are shown in the Contact column.
Consumer	Consumer that is associated with the sold product. **Note:** This field is active only when the B2B2C plugin is installed.
Derived price	Attribute that identifies whether the current sold product price is derived from another pricing source.
Product	Product model that the sold product belongs to.
Household	Household to which this sold product belongs to. **Note:** If you select a household, the **Service Organization**, **Account**, and **Contact** fields are hidden.
Service Organization	Internal or external entity that is involved in providing a service to the customer.

Sold Product (continued)

Field	Description
	Note: If you select a service organization, the **Household**, **Account**, **Contact**, and **Consumer** fields are hidden. The **Service Organization** field is active only when the service organization plugin is installed.
Service Offering	Service offering that is associated with the sold product. **Note:** • The **Service Offering** field may not appear by default in the user interface. If it doesn't appear, add the **Service Offering** field by using the form layout. • If the product model already has a service offering that is associated with it, this field is automatically populated.
Product Offering	Product offering that is associated with a sold product. **Note:** The **Product Offering** field appears only to CSM agents, managers, and the contributor persona.
Quantity	Quantity of a product that is sold to a customer.
Unit of measurement	Measurement of entitlements and products that a customer has purchased. **Note:** The **Unit of measurement** field appears only to CSM agents, managers, and the contributor persona.
Offering type	Type of product offer that is associated to a sold product.

Sold Product (continued)

Field	Description
	Note: Only the sold products that have an offering type as product appear in the sold product related lists on the Accounts page. The default value of the field remains as **Product**.
Relationship type	Relationship of a sold product that supports implicit entitlements. **Note:** The default value of the **Relationship** field is **None**.
Product location	The service location of the sold product.
Start and end dates	The existing Add order to Sold product to create Sold product state is changed to **In Preparation** if the start date >current date. If `current_date >= start_date` and `current_date <= end_date` then the state is changed to **Active**. If `current_date > end_date` then the state is changed to **Expired**.
Product specification	The product specification associated with a sold product. **Note:** The **Product specification** field is available only if you have the Product Catalog Management Core (com.sn_prd_pm) plugin and is not available on the form by default.
Provider service organization	The service organization that sells and supports the products or services owned by the customer.

Note: New fields are added to enhance the traceability for subscription-based products. Add columns to the Sold Product base table and use the **Split from** and **Split from Root** fields to track lineage during upsells, downsells, and expiration date changes ensuring accurate order management, compliance, and analytics.

Subscription & Pricing

Field	Description
Term (months)	Validity of a product or service in terms of number of months.
Subscription start date	Start date of access to a product or service.
Subscription end date	End date of access to a product or service.
Price list	Price list used to derive prices while purchasing a product or service.
Unit net price	Net price of a single unit of a sold product.
Pricing method	Pricing method associated to a sold product, whether recurring or one-time.
Periodicity	Frequency of the pricing method, whether it's weekly, monthly, annually, and so on. **Note:** You can set periodicity only if the pricing method is recurring.
One time price	One-time price to be paid for the usage of a product or service.
Monthly recurring price	Price to be paid on a monthly basis for the usage of a product or service.
Annual recurring price	Price to be paid on a yearly basis for the usage of a product or service.
Cumulative one time price	One-time price to be paid for the parent line and all the child line items.
Cumulative monthly recurring price	Price to be paid on a monthly basis for the parent line and all child line items.
Cumulative annual recurring price	Price to be paid on a yearly basis for the parent line and all child line items.
Cumulative net price	Total value of the sum of cumulative one-time net price and cumulative monthly recurring price multiplied by term. Cumulative net price = Cumulative one time price +Cumulative monthly recurring price * Term
Unit base price	Allow users to capture the base price of the specific sold product.
Sales agreement line	Allow users to capture the sales agreement directly when creating a sold product.
Unit list price	Allow users to capture the list price of the specific sold product.

Task Plan Template form

The Task Plan Template form displays details about a task plan template record.

The Task Plan Template form includes the following fields on the Details tab. After creating and saving a task plan template record, the system adds the Template Items tab to the form.

Task Plan Template form fields

Field	Description
Name	The name of the task plan template
Number	The automatically generated record number.
Short description	A brief description of the task plan template.
Target record	You can apply the task plan template to an existing record in the selected table. The**Target table** can be any extension of the Task [task] table. **Note:** This field can be empty.
Active	Enables or disables the task plan template record.
State	The task plan template can be in one of the following states: • Draft • Published
Set conditions	Use the condition builder to create one or more conditions that determine when the template is applicable.

Template item form

The Template item form displays details about a template item for a task plan template.

The Template item form includes the following fields on the Details tab.

Template item form fields

Field	Description
Number	The automatically generated record number.
Short description	A brief description of the template item.
Table	Select a table in which the system creates the template item record when the task plan template is applied. For example, if the template item is a case task, the system should create that item in the Case Task table [sn_customerservice_task].
Task plan template	Displays the number of the parent task plan template for this template item.
Order	The order in which the template item appears in the hierarchical list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Template item form fields (continued)

Field	Description
Parent	If the template item is a child of another template item, this field displays the parent item number.
Parent field identifier	The column on the selected table that captures the relationship to the parent template item.
Fields	This field appears when you select a table in the **Table** field. Specify the fields and the field values that the system should use to create the template item record. Use the **+|x** buttons to add and delete rows.

Template item condition form

The Template item condition form displays displays the conditions that apply to a that template item.

The Template item condition form includes the following fields on the Details tab.

Template item condition form fields

Field	Description
Short description	A brief description of the template item condition.
Template item	The number of the parent template item.
Condition table	The table on which the is condition applied. When you create a condition, you select a table on which the conditions are applied. The following tables are available for selection: • The same table as the **Target record** in the task plan template. • The same table as the current template item.
Condition	Use this field to add the conditions for the template item. Each condition contains a field, operator, and value(s). Select **Set conditions** to display the Condition pop-up window. • Add a condition for the template item that contains a field, operator, and value. • Select **+New condition set** to add a new condition. • Select **x** to remove a condition. • Select **Set** to save the conditions and close the pop-up window

CSM Query Rules

Query rules are used to filter the records in CSM-related tables that are accessible by users with CSM roles. These filters, which are applied in query business rules and READ ACLs on CSM-related tables, are stored in a metadata table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Starting with the London release, query rules and filters were defined in the CSQueryBRUtilOOBConstants script include. In the Quebec release, these filters have been moved to the Query Rule (sn_query_rule) table.

This change applies to Query business rules (QBRs) and read ACLs on CSM-related tables. Each data table that used QBRs prior to Quebec now has a new QBR that uses the new logic. Tables with read ACLs that used filters from the CSQueryBRUtilOOBConstants script include now have one more read ACL that uses the filters from the Query Rule table.

Availability

The CSM query filters feature is active on zBoot instances. Existing customers must contact ServiceNow Customer Support to enable this feature.

Query rules property

The *sn_cs_queryrules.use_query_rules* property determines whether to use the Query Rule table or the CSQueryBRUtilOOBConstants script include. This property is set to true for zBoot instances and false for upgraded instances.

- If true, the instance uses rules and filters from the Query Rule table to determine read access to the CSM tables for the logged-in user.
- If false, the instance uses rules and filters from the CSQueryBRUtilOOBConstants and its extensions to determine read access to the CSM tables for the logged-in user.

Query Rule table

The Query Rule (sn_query_rule) table extends the sys_metadata table and stores filters for the following tables:

- Case (sn_customerservice_case)
- Affected Install Bases (sn_install_base_m2m_affected_install_base)
- Install Base Items (sn_install_base_item)
- Installed Products (sn_install_base_m2m_installed_product)
- Sold Products (sn_install_base_sold_product)
- Order Case (csm_order_case)
- Sold Product Covered (sn_install_base_m2m_contract_sold_product)
- Orders (csm_order)
- Asset (alm_asset)
- Entitlement (service_entitlement)
- Account (customer_account)
- Work Order (wm_order)
- Contact (customer_contact)
- Contract (ast_contract)

Components installed with Customer Service Management

Several types of components are installed with the Customer Service Management application.

Tables installed with Customer Service Management

Tables are added to your instance with the activation of the Customer Service Management (CSM) application.

Tables added with the activation of the Customer Service Base Entities plugin

The following tables are added with the activation of the Customer Service Base Entities plugin. This plugin is activated automatically by the Customer Service plugin.

Different tables names installed with Customer Service Management

Table	Description
Account [customer_account]	Stores the customer account and partner records.
Account Address [account_address_relationship]	Stores the associations between the locations (addresses) and accounts.
Account Access [sn_csm_account_access]	Stores the records that restrict the contact access to CSM entities.
Account Relationship [account_relationship]	Stores the records for the relationships that have been created between the two accounts.
Address Type [cmn_location_type]	Stores the address types for the CSM entities, such as Billing or Shipping. Address types are typically used with order cases.
Consumer [csm_consumer]	Stores the consumer records.
Consumer User [csm_consumer_user]	Stores the consumer registration records that are created when the consumers complete the self-registration process from the Consumer Service Portal. This table extends the Users table (sys_user).
Contact [customer_contact]	Stores the customer contact records.
Contract Contact [contract_rel_contact]	Stores the relationships that are created between the contacts and contracts.
Household [csm_household]	Stores the consumer household records.
Entitlement [service_entitlement]	Stores the entitlement records.

Different tables names installed with Customer Service Management (continued)

Table	Description
Consumer Profile [sn_csm_consumer_profile]	Stores the references to the consumer and can be expanded to support multiple profiles within and across industries, with each profile having its own set of attributes in the extended table.
Consumer Profile Location [sn_csm_consumer_profile_location]	Stores the relationships between the consumer profiles and locations (addresses).

Tables added with the activation of Customer Service plugin

The following tables are added with the activation of the Customer Service plugin.

Table names and their description

Table	Description
Account Relationship Access [sn_customerservice_account_relationship_access]	Stores the type of access for the account relationships.
Account Relationship Type [sn_customerservice_account_relationship_type]	Stores the relationship types that are created for the bi-directional account relationships.
Account Team Member [sn_customerservice_team_member]	Stores the team members that are assigned to the account teams.
Agent Token [sn_customerservice_agent_token]	This table isn't currently used.
Appointment [sn_customerservice_appointment]	Stores the appointments that have been created for the customer service cases.
Asset Contact [sn_customerservice_m2m_asset_contact]	Stores the asset contact relationship records.
Case [sn_customerservice_case]	Stores the customer service case records.
Case Entitlement [sn_customerservice_case_entitlement]	Stores the entitlements associated with case records. Associated entitlements are available in the Entitlements related list on the case record. The sn_customerservice.advanced_entitlements system property controls the display of this related list.

Roles installed with Customer Service Management

The Customer Service Management application uses roles to provide access to information, identify internal and external users, maintain data security, and establish different types of relationships between users.

Primary roles

Customer Service Management provides several primary roles that support the following business models:

- Business-to-business (B2B): With this business model, you can support accounts and contacts. Additionally, you can create relationships and account teams to support your customers.
- Business-to-consumer (B2C): With this business model, you can support individual consumers.

These roles ensure access to data while maintaining data security for different types of business relationships.

CSM primary roles

Internal Roles	External Roles
Business-to-business (B2B) • sn_customerservice_agent • sn_customerservice_manager	**Business-to-business (B2B) Customer** • sn_customerservice.customer • sn_customerservice.customer_admin • sn_customerservice.customer_case_manager
Business-to-consumer (B2C) • sn_customerservice.consumer_agent • sn_customerservice_manager	**Business-to-business (B2B) Partner** • sn_customerservice.partner • sn_customerservice.partner_admin
	Business-to-consumer (B2C) sn_customerservice.consumer

For details about these roles, see CSM roles and descriptions below.

Internal and external roles

Customer Service Management includes both internal and external user roles.

- Internal roles are assigned to users within your organization. These roles are for agents and managers using the Customer Service Management application to support customers.
- External roles are assigned to users outside your organization. These roles are for customers, customer partners, and consumers using the self-service portals.

With these roles, you can give both internal users and external users access to your instance. This role structure gives you the flexibility to provide different levels of access to different users. As an additional security measure, every user must have at least one role so that the instance can distinguish between internal and external users.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Base roles

The primary roles available in Customer Service Management are based on the following base roles:

- sn_esm_agent
- sn_esm_admin
- sn_esm_partner
- sn_esm_partner_admin
- sn_esm_user
- sn_esm_user_admin

For more information about these roles, see Roles installed with the Customer Service Base Entities plugin below.

For more information about the CSM primary role structure and included roles, see CSM roles and descriptions below.

Explicit roles

You may have business requirements that change the use of these roles. In addition, the Explicit Roles in CSM feature may assign both internal and external roles to external users. It is important to regularly review user role assignments to ensure that they are set according to your business requirements.

For more information about reviewing and updating user role assignments, see:

- KB0829930
- Fix external user role assignments

.

CSM roles and descriptions

Primary CSM roles

Role title [name]	Description	Contains roles
Customer service agent [sn_customerservice_agent]	An agent who assists customers and partners with questions, issues, and problems. This user creates cases, views and edits cases, and works with customers and subject matter experts to resolve cases. A customer service agent typically supports a specific set of products across one or more communication channels. An agent can	• knowledge • chat_admin • sn_customerservice.deescalation_requester • timecard_user • template_editor • sn_esm_agent • sn_shn.editor • domain_expand_scope

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Primary CSM roles (continued)

Role title [name]	Description	Contains roles
	belong to one or more agent groups.	**Note:** The sn_esm_agent role contains the cmdb_read role.
Customer service manager [sn_customerservice_manager]	Customer service agent with the additional responsibility for managing agents or agent groups and overriding agent actions.	• sn_customerservice_agent • timecard_manager • timecard_approver • skill_admin • sn_app_cs_social_social_profile_user • sam • sn_customerservice.consumer_agent • asset • sn_shn.admin • sn_publications.approver • contract_manager • sn_app_cs_social_log_user • awa_manager • sn_majorissue_mgt.major_issue_manager • email_client_quick_message_author • workspace_admin • skill_model_user • sn_templated_snip.template_snippet_writer • approver_user **Note:** For customers upgrading to Xanadu, the approver_user role replaces the approval_admin role. Users with the customer service manager role can approve the approval requests that are assigned to them.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Primary CSM roles (continued)

Role title [name]	Description	Contains roles
		• notify_view **Note:** The notify_view role is added to the sn_customerservice_manager role only when the Chat Zoom Connector application is installed.
Consumer service agent [sn_customerservice.consumer_agent]	An agent who assists consumers with questions, issues, and problems. This user creates, views, and edits cases and works with consumers to resolve cases. An agent typically supports a specific set of products across one or more communication channels. An agent can belong to one or more agent groups.	• sn_esm_agent • chat_admin • sn_shn.editor • template_editor • knowledge
Customer [sn_customerservice.customer]	Customer role for researching questions, issues, or problems. Customers can create cases and view and edit existing cases for themselves. They can also view a list of assets belonging to their accounts.	• sn_esm_user • snc_external
Customer administrator [sn_customerservice.customer_admin]	Administrator role for a customer account. This user has access to data within the account.	• sn_customerservice.customer • sn_esm_user_admin
Customer case manager [sn_customerservice.customer_case_manager]	Customer role for managing the cases in an account and any related child accounts. The customer case manager role includes the privileges of the customer role and adds the following privileges: • Create a case on behalf of another contact in the account. • View a list of cases belonging to the account. • Edit cases belonging to the account.	sn_customerservice.customer

Primary CSM roles (continued)

Role title [name]	Description	Contains roles
	Note: The customer case manager role is not automatically added to the **sn_customerservice.contact_role_assignment** system property. To expose this role to customer and partner administrators, navigate to **Customer Service** > **Administration** > **Properties** and add it to this property.	
Partner [sn_customerservice.partner]	Partner who is serving customer accounts. A partner can create a case for their own account or on behalf of a customer account. A partner can view and edit all of the cases that they have created: • For their own account. • On behalf of customer accounts that they are related to. **Note:** If you are establishing a new relationship between a partner and a customer, the partner or partner admin does not have access to historic cases created for the customer. This is because the historic cases do not have the **Partner** or **Partner Contact** fields populated on the Case form.	• sn_customerservice.customer • sn_esm_partner
Partner administrator [sn_customerservice.partner_admin]	Administrator role for a partner account. The partner administrator can do the following:	• sn_customerservice.partner • sn_customerservice.customer_admin • sn_esm_partner_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Primary CSM roles (continued)

Role title [name]	Description	Contains roles
	• Access the data within the partner account. • Access the data created by the contacts in their company in the customer account. • Manage users for the partner account and for customer accounts. • View all of the cases created by a partner.	
Consumer [sn_customerservice.consumer]	Consumer role for researching questions, issues, or problems. Consumers can create cases and view and edit existing cases for products that they have purchased. They can also view a list of their products.	• sn_esm_user • snc_external

Additional CSM roles

Role title [name]	Description	Contains roles
Case contributor editor [sn_customerservice.case_contributor_editor]	This role provides limited write access to the fields on the Case form. It provides limited write access to those cases for which the user already has read access provided by another role. Limited write access is available for the following fields: • Work notes • Additional comments • Attachments • State or stage changes • Contributor users • Contributor groups • Watchlist • Work notes list

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Additional CSM roles (continued)

Role title [name]	Description	Contains roles
Case contributor viewer [sn_customerservice.case_contributor_viewer]	This role provides read-only access to all of the tables associated with a case. With this role, a user can view the information in the related lists for a case if: • The user has been added to the **Contributor User** field or the **Contributor Group** field on the Case form. • The user has read-only access to cases through another role, such as the case viewer role (sn_customerservice.case_viewer) or the case task agent role (sn_customerservice.case_task_agent). With this role, a user can access the following modules in CSM Agent Workspace:**All tasks I participate in**	• sn_shn.user • wm_read
Case task agent [sn_customerservice.case_task_agent]	This role provides access to case tasks and related case information. A user with this role can work on the following case tasks: • Tasks that are assigned to the user or to the user's assignment groups. • Tasks that have been created by the user. With this role, the user can: • View and update assigned case tasks. • Create case tasks and assign those tasks to other users. • View and update created case tasks. • Add work notes, comments, and attachments to case tasks.	• sn_customerservice.customer_data_viewer • sn_customerservice.csm_workspace_user • sn_customerservice.case_contributor_editor

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Additional CSM roles (continued)

Role title [name]	Description	Contains roles
	• Update the status of case tasks. • Perform additional actions from a case task such as sending email. With this role, users have read-only access to customer information for the case: • Account and contact records (for B2B cases) • Consumer and household records (for B2C cases) • Service organization records (business location cases)	
Case task viewer [sn_customerservice.case_task_viewer]	This role provides read-only access to all case task records. **Note:** When combined with the case viewer role (sn_customerservice.case_viewer), a user can access all customer service cases and all case tasks.	
Case viewer [sn_customerservice.case_viewer]	This role provides read-only access to all cases.	
Contact manager [sn_customerservice.contact_manager]	User who can manage contacts.	
Customer project manager [sn_customerservice.projectmanager]	A user who creates and manages projects for customer accounts. • Creates new projects. • Sets up project tasks and resource plans. • Identifies customer contacts who have access to projects and project tasks. • Assigns and manages tasks and dependencies.	sn_customerservice.customer_data_viewer

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Additional CSM roles (continued)

Role title [name]	Description	Contains roles
	Note: This role is added with the Customer Project Management plugin (com.snc.csm_ppm)	
Customer project stakeholder [sn_customerservice.projectstakeholder]	A user who is responsible for activities that require viewing customer project details and project tasks. **Note:** This role is added with the Customer Project Management plugin (com.snc.csm_ppm)	
Data viewer [sn_customerservice.customer_data_viewer]	User with read-only access to customer data entities such as: • Install base items • Contracts • Entitlements • Accounts, contacts, and account team members • Assets • Consumers • Sold product	
De-escalation requester [sn_customerservice.deescalation_requester]	User who can deescalate a case or account when the cause of the escalation is resolved.	sn_customerservice.escalation_requester
Escalation requester (sn_customerservice.escalation_requester)	User who can request an escalation for a case or account.	sn_customerservice.consumer_agent
Proxy case creator [sn_customerservice.proxy_case_creator]	Users with the proxy case creator role can create customer service cases directly from community questions created by contacts or consumers	
Proxy contact [sn_customerservice.proxy_contact]	Role that enables employees to create cases for customer accounts and contacts. Employees can also be proxy

Fix external user role assignments

Internal user data

Internal user data includes information about the users who are internal to your organization, such as managers, agents, and other employees. Internal users can also belong to user groups.

A user is an individual who can access your instance and a group is a set of users who share a common purpose. The users associated with a group are listed as group members.

User roles provide access to customer service features, capabilities, and data. The following user roles are available in the Customer Service Management application for internal users:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Customer service agent [sn_customerservice_agent]
- Consumer service agent [sn_customerservice.consumer_agent]
- Customer service manager [sn_customerservice_manager]

For detailed descriptions about user roles, see Roles installed with Customer Service Management.

Business Stakeholder for Customer Service Management

Business Stakeholder for Customer Service Management includes plugins and roles that provide access to business stakeholder features.

Customers who have purchased the Customer Service Management Subscription product may provide Business Stakeholder users with the rights to the following actions:

- Create cases on behalf of a customer or a service organization.
- View cases, case tasks, and customer data.
- View and drill through reports.
- Approve requests.

Roles for business stakeholder users

You can assign the following roles to any user who is a business stakeholder.

Create cases on behalf of customers

Role	Description	Contains roles	Plugin	User type
Account contributor [sn_customerservice.account_contributor]	This role enables users to create cases for any account.	sn_customerservice.case_contributor_creator	CSM Contributor User (com.snc.csm_contributor_user)	Internal and external
Case authorized contributor [sn_customerservice.case_authorized_contributor]	This role enables users, when added to an individual case as a related party, to: • Add additional comments and attachments • Receive notifications on case updates • Update case tasks • Accept or reject a solution • Close a case	• sn_customerservice.case_write_granular • sn_customerservice.case_related_party_write_granular	CSM Contributor User (com.snc.csm_contributor_user)	Internal

Create cases on behalf of customers (continued)

Role	Description	Contains roles	Plugin	User type
Consumer contributor [sn_customerservice.consumer_contributor]	This role enables users to create cases for any consumer.	sn_customerservice.case_contributor	CSM Contributor User (com.snc.csm_contributor_user)	Internal and external
Relationship contributor [sn_customerservice.relationship_contributor]	This role enables users to create cases for those customers with which they have an established relationship.	sn_customerservice.case_contributor	CSM Base Extension Entities (com.snc.cs_base_extension)	Internal and external
Location Relationship Manager [sn_bus_loc.location_relationship_manager]	This role enables users to view cases across all the external business locations where they have sn_bus_loc.location_relationship_manager responsibility.	sn_customerservice.svc_location_manager_contributor	Business Location (com.snc.business_location)	Internal contributor
Location Manager Contributor [sn_customerservice.svc_location_manager_contributor]	This role enables users to create, update, view, and approve cases. They can also register and remove staff across all business locations they manage.	• sn_customerservice.consumer_contributor • sn_customerservice.svc_location_manager_core • sn_customerservice.service_organization_contributor • sn_customerservice.account_contributor	Business Location (com.snc.business_location)	Internal and external

Create cases as proxy contact

Role	Description	Plugin	User type
Proxy contact [sn_customerservice.proxy_contact]	This role enables employees to create cases for customer accounts and contacts.	CSM Extension for Proxy Contacts (com.snc.csm_proxy_contacts)	Internal

For more information about the proxy contact role, see Create cases as a proxy contact.

Explicit Roles in CSM

You can give both internal users and external users access to your instance. However, you might not want both types of users to have the same level of access. To provide added security, every user must have at least one role so that the instance can distinguish between internal and external users.

As of the Paris release, no user can have both of the explicit roles (snc_internal and snc_external). Groups and role containment cannot include both roles, either, since that would cause any group member or user who is assigned to such a group or such a role to automatically have both roles. The ServiceNow AI Platform aborts any operation that would create such a scenario.

External users must obtain, at minimum, the snc_external role. The snc_external role indicates that the user is external to your organization. They should not have any access to resources unless explicitly allowed through ACLs for the snc_external role or additional roles that inherit the snc_external role. By default, users with the snc_external role cannot access:

- Tables without the role that inherits the snc_external role or the public role.
- Non-record type resources, such as processors and UI pages without granting access to the snc_external role or a role that inherits the snc_external role.
- Platform Analytics dashboards.

Do not mark the snc_internal role as elevated. Otherwise, internal users cannot access the instance.

Recommended CSM roles for internal and external users

Customers (external users) using the Customer Service Management application should be assigned either the sn_customerservice.customer or the sn_customerservice.consumer role. Customer service agents (internal users) should be assigned either the sn_customerservice_agent or sn_customerservice_consumer_agent role. The system ensures that the same user is not assigned both a customer (external) and agent (internal) role.

Explicit Roles plugin

The Customer Service plugin (com.sn_customerservice) activates the Explicit Roles plugin (com.glide.explicit_roles), which adds the snc_external and snc_internal roles. When the plugin is activated:

- All users must have either the snc_internal role to access internal resources or the snc_external role to access external resources.
- All existing users are automatically assigned the snc_internal role. This role does not change existing access levels or system behavior. Instead, it provides a category to differentiate internal users from external users. All internal users maintain the same level of access as before the plugin was activated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
To prevent changing existing functionality for users, activating the Explicit Roles plugin assigns the snc_internal user role to all existing users in the instance. This includes any external users added before the Explicit Roles plugin was activated. After the Explicit Roles plugin is activated, do the following for all external users added before the Explicit Roles plugin was activated:

- Remove the snc_internal role.
- Add the snc_external role.

Doing the preceding ensures that external users added before activating the Explicit Roles plugin do not have access to internal resource that should be available only to internal users.

- Newly created users are automatically assigned the snc_internal role when they first attempt to log in to the instance, unless they have been explicitly assigned the snc_external role. You can add the snc_external role to a new user before they first log in to the instance to provide external user rights.

Important:
Activate this plugin during a maintenance window or when few users are logged in. Users currently logged in when the plugin is activated will not be dynamically assigned the snc_internal role. Rather, users must log out and log back in to be assigned the snc_internal role. Once the plugin is activated, you can add or remove the snc_internal and snc_external roles at any time to change user rights.

- All existing ACLs that do not have a role requirement are automatically assigned the snc_internal role. Because both existing ACLs and roles are assigned the snc_internal role, existing access levels do not change.
- Newly created ACLs that do not have a role requirement are automatically assigned the snc_internal role. This role assignment does not apply to a newly created ACL with a role assigned.
- For all existing Processor [sys_processor] records or newly created Processor [sys_processor] records with **Type=script**, the snc_internal role is automatically added to the **Roles** field if the field is empty.
- To restrict access to UI pages to internal users, the plugin automatically assigns the snc_internal role to the * ACL with a **Type** of **ui_page**.
- To restrict access to processors to internal users, the plugin automatically assigns the snc_internal role to the * ACL with a **Type** of **processor**.
- External users must obtain, at minimum, the snc_external role to access the instance. This role is automatically assigned to external Customer Service Portal contacts. If the Customer Service Portal is not activated, this role must be manually granted to external users'. Access to records is granted through ACLs.

Note:
You can use the `isPublic()` function in scripts for Customer Service Portal to change the privacy setting for a single client-callable script include. For more detail, see Script includes.

- Content Management System site access is also affected. CMS is set up with Sites (content_site), Pages (content_page), and other resources. Some of the sites may have the **Login page** configured.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If CMS sites do not have the **Login page** configured, the public role is automatically added to the **Read Roles** field on Pages (content_page) if the field is empty.
- If CMS sites have the **Login page** configured, the snc_internal role is automatically added to the **Read Roles** field on Pages (content_page) if the field is empty.

- Service Portal site access is also affected.

  The snc_internal role is not automatically added to sp_page, sp_widget or sp_instance records. If desired, you can give new records the role by assigning snc_internal as a default value in the **Roles** field for these records. For details on this process see Specify a default field value.

Do not move System update sets among instances with and without the Explicit Roles plugin enabled.

Note:
This plugin also requires the Contextual Security Manager plugin.

The glide.security.explicit_roles.internal_user_blacklist property

The Explicit Roles plugin assumes that all existing users in the sys_user table at the time the plugin is installed are internal customers. A fix script assigns the snc_internal role to all existing users and to any ACL that does not have a role.

The fix script may fail or may not finish in time for a user who has not been updated with the role and who attempts to access a resource. To bridge this potential gap, the Contextual Security Manager (CSM) auto-assigns the snc_internal role to any user who logs in and does not have an explicit role (either internal or external).

Additionally, CSM has a business rule process that assigns the snc_external role to a classification of their users. However, when importing large sets of CSM external customers, workflow is set to false, so business rules don't run. As those users attempt to access a resource, they do not have any explicit roles. The Contextual Security Manager assigns the snc_internal role through a scheduled job called On-Call Gaps Conflicts Report that runs every 7 days. When the Explicit Roles plugin is active, this job assigns the snc_internal role to the CSM external user, since the user does not have either the snc_internal or snc_external role.

To prevent inadvertently providing the snc_internal role to external users, the Explicit Roles plugin includes a *`glide.security.explicit_roles.internal_user_blacklist`* property to exclude user types from ever becoming snc_internal. If there are no users types in the glide.security.explicit_roles.internal_user_blacklist table, the Contextual Security Manager assigns all users the snc_internal role by default. If there are classnames in the blacklist table, and if the sys_user class type is in the blacklist table, CSM assigns the snc_external role. Otherwise, CSM assigns the default snc_internal role as usual.

For the Paris release, this property is enabled by default for zBoot instances and and disabled by default for upgrades.

Providing table access to external users

You can provide external users access to a table by adding a role to the table that inherits the snc_external role. For more information, see Provide external users access to a table.

The hasRoles() method

The `hasRoles()` method is still available, but is deprecated in the Geneva release. Use the `hasRole(role name)` method instead.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you do use the `hasRoles()` method, note these changes:

- This method automatically excludes the default snc_internal role when it checks for roles. This means that if a user has only the snc_internal role, the `hasRoles()` method still returns **false**.
- If the user has the snc_external role, the method returns **false** because the instance considers external users to be without a role.

Mutual exclusion: snc_external versus snc_internal

The ServiceNow AI Platform prevents users from having both the snc_external role and the snc_internal role. The ServiceNow AI Platform applies this mutual exclusion everywhere in the system and writes error messages to the logs for each conflict.

Note:
ACLs can have both roles if the ACL resources should be accessible to all users.

Example: Adding both explicit roles to a user (direct collision):

1. Assign user Abel Tuter the snc_internal role.
2. Assign user Abel Tuter the snc_external role.

Result: Adding the snc_external role fails because Abel Tuter has the snc_internal role.

Example: Adding both explicit roles to a group (direct collision):

1. Consider a group called Test Group that currently has no explicit roles assigned to the group.
2. Add Abel Tuter to the Test Group.
3. Add the snc_external role to Test Group.

Result: Adding the snc_external role fails because Abel Tuter already has the snc_internal role and can't have both roles.

Example: Adding an explicit role to a group where a group member has the conflicting explicit role (indirect collision):

1. Assign user Abel Tuter the snc_internal role.
2. Consider a group called Test Group that currently has no explicit roles assigned to the group.
3. Add Abel Tuter to the Test Group.
4. Add the snc_external role to the Test Group.

Result: Adding the snc_external role to the group fails because Abel Tuter would inherit the snc_external role through group membership. Both explicit roles would be assigned to the same user, which isn't allowed.

For other examples, see the following table:

Role	Attempted action	Result
Direct collision		
The user has the snc_internal role.	Add the snc_external role.	The action is aborted.
The user has the snc_external role.	Add the snc_internal role.	The action is aborted.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role	Attempted action	Result
The user has no explicit role.	Add the snc_internal or snc_external role.	The role is added.
The user has both explicit roles (existing collision).	Add the user to a group with no roles.	The action is aborted.
A role not associated with any users contains the snc_internal role.	Add the snc_external role.	The action is aborted.
A role not associated with any users contains the snc_external role.	Add the snc_internal role.	The action is aborted.
A role contains both explicit roles (existing collision).	Add the role to a user, role, or group.	The action is aborted.
A group with no members has the snc_internal role.	Add the snc_external role.	The action is aborted.
A group with no members has the snc_external role.	Add the snc_internal role.	The action is aborted.
A group with no members has no roles.	Add the snc_internal or snc_external role.	The role is added.
Indirect collision		
Role containment with collision	1. Grant a role called Test Role to a user with the snc_internal role. 2. Add the snc_external role Test Role.	The action is aborted.
Role containment without collision	1. Grant a role called Test Role to a user with no roles. 2. Add the snc_external role to Test Role.	The role is added to both the user and Test Role.
Group containment with collision	1. Add a user who has the snc_internal role to a group called Test Group 2 (child of Test Group 1).	The action is aborted.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role	Attempted action	Result
	2. Add the snc_external role to Test Group 2. **3.** Add the snc_external role to a parent group called Test Group 1 (parent of Test Group 2).	
Group containment without collision	**1.** Add a user with no roles to a group called Test Group 2 (child of Test Group 1). **2.** Add the snc_external or snc_internal role to Test Group 1 (parent of Test Group 2).	The role is added to the parent group, the child group, and the user.
Group containment plus role containment with collision	Add contains_external to Test Group 1, the parent of Test Group 2.	Test Group 1 and Test Group 2 both get contains_external, but don't explicitly get the snc_external role.
	Add the snc_internal role to Test Group 2, the child of Test Group 1.	The action is aborted.
Group parent change plus group containment	**1.** Remove Test Group 1 as the parent of Test Group 2. **2.** Add the snc_internal role to Test Group 1. **3.** Add the snc_external role to Test Group 2. **4.** In Test Group 2, set Test Group 1 as the parent group and save.	The action is aborted. Repeat for already nested groups, with the same expectation.

The cause of an aborted action appears in the error message and must be addressed before another attempt succeeds.

For direct cases, such as adding an explicit role to an individual user, verify which explicit role the user should have. If the user has the wrong explicit role, it must first be removed, and then the correct explicit role must be added.

For indirect cases,such as adding an explicit role to a group (so that a group member would be assigned both explicit roles), evaluate whether that user should be in the group. Also determine whether the group should be given the explicit role, including any inheritance through group hierarchy and role containment.

Note that the ServiceNow AI Platform reports only the first potential collision encountered. If repeated attempts continue to fail after remediation, with a new root cause each time, re-evaluate the relevant user/group/role interdependence more broadly. You may want to rethink how groups and role containments are structured.

Provide external users access to a table

To enable users with only the snc_external role to access the list view of a table, you must create a series of ACLs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: security_admin

Procedure

1. Elevate to a privileged role.
2. Create an ACL rule with the following settings:
   - **Type**: ui_page
   - **Operation**: read
   - **Name**: {table_name}_list
   - **Required role**: snc_external
3. On the default **read** ACL for the table, add **snc_external** in the Required role list. Create the ACL if it does not already exist.
4. Use these settings to create another ACL:
   - **Type**: ui_page
   - **Operation**: read
   - **Name**: {table_name}
   - **Required role**: snc_external
5. Use these settings to create another ACL to give the user write access to a field in the table:
   - **Type**: record
   - **Operation**: create
   - **Name**: {table_name} {column_name}
   - **Required role**: snc_external

   Repeat this step for every field that you want to give the user write access to. Use an asterisk * instead of the column name to provide access to all fields at once.

Creating custom user roles

System administrators can create custom roles or modify the access of existing roles by using script includes and extension points/instances.

The Customer Service Management application uses platform ACLs and query business rules to restrict data access based on user roles. If needed, users with the administrator role can create custom roles or modify the access of existing roles by using script includes and extension points/instances.

- The script includes store JavaScript functions and classes to handle the role access control logic.
- Extension points/instances designate places where custom scripts can be called and then processed to extend base functionality.

The administrator can use the extension points/instances to create their own role access constants file similar to CSQueryBRUtilOOBConstants.

The administrator can create an extension instance for the existing extension point and use it to define custom role configuration constants. The following items are included with the Customer Service Management application:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- global.CSQeryExtensionPoint: the provided extension point for CSM role configuration
- instance.CSQueryExtensioninstanceOOB: the provided extension instance for CSM role configuration

To create a role:

1. Create a constant file to hold the configurations for the new role similar to CSQueryBRUtilOOBConstants. For example:

```
CSQueryBRUtilOOBConstantstest.ROLE_PERMISSIONS_POOL = {

 'sn_customerservice.customer_new_role':{ 'sn_customerservice_c
ase':{'condition':['my_new_condition']},
} ,
```

2. Create an extension instance to hold the logic returning this new constant file to CSQueryBRUtil.
3. Make sure that this role is on the instance and contains the sn_esm_user role.
4. Assign this new role to a contact.
5. Create or modify the ACLs and query business rules for this role as necessary.

For more information about modifying ACLs and query business rules, see KB0685767.

Client scripts installed with Customer Service Management

Client script	Table	Description
Channel and State readonly for customer	Case [sn_customerservice_case]	Sets the **Channel** and **State** fields to read only the Case form that the customer can view from the customer portal.
Check Contextual Security Installed	Contact [customer_contact]	Checks if the Contextual Security plugin (com.glide.role_management) is installed befo creating a customer contact.
Customer Case View	Case [sn_customerservice_case]	Hides certain elements in the Case form for ES view.
Empty Case form on Account Change	Case [sn_customerservice_case]	When you change the value in the **Account** fie on the Case form, the values in the following fields are cleared: **Partner**, **Partner contact**, **Asset**, **Entitlement**, **Contract**, and **Contact**.
Empty Partner Contact on Partner Change	Case [sn_customerservice_case]	When you change the value in the **Partner** fiel on the Case form, the **Partner contact** field is also cleared.
Hide Activity Stream	Contact [customer_contact]	Hides the activity stream on top of the form header.
Hide attachment icon	Registration Request [sn_customerservice_registration]	Hides the attachment icon on top of the form header.
Hide Icons Form Header	Case [sn_customerservice_case]	Hides the email icon from the more options me and the activity stream icon at the top of the fo header. Also hides the book icon next to the **Short Description** field on the form.
Hide Suggestion next to Short Description	Case [sn_customerservice_case]	Hides the suggestion icon next to the **Short description** field.
Make field readonly	Account Relationship Type [sn_customerservice_account_relationship_type]	Sets the **From** and **To** fields to read only once a record is created in the Account Relationship Type table (sn_customerservice_account_relationship_ty
Open the glide list for new appointment	Appointment [sn_customerservice_appointment]	Opens the glide list to select the user for an appointment for new records.
Populate Contact Company	Case [sn_customerservice_case]	When a user name is selected in the **Contact** field, the **Account** field is populated with the contact's account information.

Client scripts installed with Customer Service Management (continued)

Client script	Table	Description
Populate Contract	Case [sn_customerservice_case]	Populates the **Contract** field when the **Accoun** field is filled.
Populate contract and entitlement	Case [sn_customerservice_case]	Populates the **Contract** and **Entitlement** fields when the **Account** field is filled.
Populate Entitlement	Case [sn_customerservice_case]	Populates the **Entitlement** field when the **Account** field is filled.
Populate Product	Case [sn_customerservice_case]	When an asset is selected in the **Asset** field, the **Product** field is populated with the asset's product model.
Registration code read-only	Registration Request [sn_customerservice_registration]	Sets the **Registration code** field to read-only.
Set account read on load	Account Team Member [sn_customerservice_team_member]	Sets the **Account** field to read only for a new record when the account isn't empty on form load.
Set asset readonly	Asset Contact [sn_customerservice_m2m_asset_contact]	Set the **Asset** field to readonly for a new form when the asset value isn't empty.
Show partner field	Case [sn_customerservice_case]	Shows the **Opened by** field on the Case form.
Special Handling Notes for Case	Case [sn_customerservice_case]	Shows all the Special Handling Notes with disp type alert related to the current record.
Validate Product Entitlement	Entitlement [service_entitlement]	Displays a field warning message for the **Per unit** field if a product is selected but the **Asset**, **Contract**, and **Account** fields are empty.

Business rules installed with Customer Service Management

Business rules are added with activation of Customer Service Management.

The following table describes the business rules and their related tables that are added with Customer Service Management.

Business rules added with Customer Service Management

Business rule	Table	Description
Account query for customer	Account	Queries the account for the customer contact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rules added with Customer Service Management (continued)

Business rule	Table	Description
	[customer_account]	
Account relationship display rule	Account Relationship [account_relationship]	Displays the correct values in the bi-directional diagram on the Account Relationship form.
Add customer role to contacts	Contact [customer_contact]	Adds the customer role (sn_customerservice.customer) to a customer contact if the contact has no assigned roles or if the user ID for the contact is set.
Add snc external role to contacts	Contact [customer_contact]	Adds the snc_external user role to each contact.
Add Primary Contact to Asset Contact	Asset [alm_asset]	When an asset is assigned a new primary contact, the primary contact is added to the asset contact.
Approver query for customer	Approval [sysapproval_approver]	Queries the approver for a customer contact.
Asset query for customer	Asset [alm_asset]	Queries the assets for a customer contact.
Auto assessment business rule	Case [sn_customerservice_case]	Triggers a customer satisfaction survey when a case is set to **Closed**.
Case query for customer	Case [sn_customerservice_case]	Queries the cases for a customer contact.
Case display rule	Case [sn_customerservice_case]	A display business rule on the Case form which passes some values to the browser when a case is displayed.
Change Awaiting to Open	Case [sn_customerservice_case]	Changes the case state from **Awaiting Info** to **Open**.
Check duplicate	Asset Contact [sn_customerservice_m2m_asset_contact]	Checks for duplicate records before creating a new asset contact.
Check duplicate for responsibility	Contact Relationship [sn_customerservice_contact_relationship]	Checks for duplicate responsibilities before creating a new contact relationship.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rules added with Customer Service Management (continued)

Business rule	Table	Description
Check duplicate for responsibility	Asset Contact [sn_customerservice_m2m_asset_contact]	Checks for duplicate responsibilities before creating a new asset contact.
Check snc_external roles exist	Contact [customer_contact]	Checks if the com.glide.security_schema plugin is activated.
Contact query for customer	Contact [customer_contact]	Queries the contacts for a customer.
Contract query for customer	Contract [ast_contract]	Queries the contracts for a customer.
Create bi-direction relationship	Account Relationship [account_relationship]	After an account relationship is created, this business rule creates the bi-directional account relationship record.
Delete Account Contacts and Assets	Account Relationship [account_relationship]	When an account relationship is deleted, this business rule deletes the corresponding account and asset contacts.
Delete relationship type	label [account_relationship_type]	Checks to see if any relationship records are using a relationship type before that relationship type is deleted.
Delete responsibility definition	Responsibility Definition [sn_customerservice_responsibility_def]	Checks to see if any account team members are using a responsibility definition before that responsibility definition is deleted.
Display request message	Registration Request [sn_customerservice_registration]	After registration request submittal, shows info message to user
Display rule	Registration Request [sn_customerservice_registration]	Shows message to remind users to enter a correct registration code
Entitlement query for customer	Entitlement [service_entitlement]	Queries the entitlements for a customer contact.
Insert Case Work Notes	Appointment [sn_customerservice_appointment]	Updates the case work notes with the appointment details when an an appointment is created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rules added with Customer Service Management (continued)

Business rule	Table	Description
Populate company for case	Case [sn_customerservice_case]	Populates the **Company** field on the Case form based on the name entered in the **Contact** field.
Set First Response Time	Case [sn_customerservice_case]	When a case is created or updated, this rule sets the current time in the first_response_time field. Also used when a case is set to **Resolved** or **Awaiting Info** or when comments or close notes are added. **Note:** The first_response_time field is not used.
Update account based on reg code	Registration Request [sn_customerservice_registration]	Validates the registration registration code and assigns the account associated with the registration code.
Update account relationship labels	Account Relationship Type [sn_customerservice_account_relationship_type]	When the labels for an account relationship type are updated, this business rule updates all of the related account relationship records.
Update case entitlement on Close	Case [sn_customerservice_case]	Updates the associated entitlement when the state of a case is set to **Closed**.
Update Case Work notes	Appointment [sn_customerservice_appointment]	Adds work notes to the case when an appointment for the case is updated.
Update Case Work Notes	Knowledge [kb_knowledge]	Adds work notes to the case when a knowledge article associated with the case gets updated.
Update Parent Case for new task	Task [sn_customerservice_task]	Updates the case when a new case task is created.
Update Parent case for state change	Task [sn_customerservice_task]	Updates the case when a new case task is changed.
Update relationship label	Account Relationship [account_relationship]	Updates the relationship labels for bi-directional account relationships.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rules added with Customer Service Management (continued)

Business rule	Table	Description
Update User Task State	Case [sn_customerservice_case]	Calculates the work load for the agent based on the number of cases assigned to the agent. Also updates the last assigned time. This rule is used by the matching rule engine.
Validate registration	Registration Request [sn_customerservice_registration]	Checks if the registration is valid based on the user's email address. If the user exists in the system or a request has already been submitted and is in the pending state, the registration request is not allowed.

Components installed with CSM workspaces

Several types of components are installed with CSM workspaces.

Roles

The agent workspace user role (agent_workspace_user) is added to the Service Management agent (sn_esm_agent) role. The role is required to access Agent Workspace for CSM.

Form views

Customer service agents see forms in the CSM Workspace form view (workspace_csm), if they exist for certain record types. Otherwise, agents see forms in the Workspace form view.

Tables

In CSM workspaces, a number of Customer Service Management tables are provided with the Workspace and CSM Workspace view layouts.

Tables in Workspace view

The Workspace view is provided for the following tables:

- Case (sn_customerservice_case)
- Consumer (csm_consumer)
- Account (customer_account)
- Contact (customer_contact)
- Account Relationship (account_relationship)
- Asset (alm_asset)
- Contract (ast_contract)
- Product Model (cmdb_model)
- Entitlement (service_entitlement)
- Task (sn_customerservice_task)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Appointments (sn_customerservice_appointment)
- Contact Relationship (sn_customerservice_contact_relationship)
- Escalation (sn_customerservice_escalation)
- Order (csm_order)
- Order Case (csm_order_case)
- Special Handling Notes (sn_shn_notes)
- Order Line Item (csm_order_line_item)
- Asset Contact (sn_customerservice_m2m_asset_contact)
- Account Team Member (sn_customerservice_team_member)
- Social Profiles table (sn_app_cs_social_social_profile)
- Social Logs table (sn_app_cs_social_social_log)
- Knowledge Applied to Tasks table (m2m_kb_task)

Tables in CSM Workspace view

The CSM Workspace view (workspace_csm) is provided for the following tables:

- Interaction (interaction)
- Location (cmn_location)

The CSM Workspace view for these tables is similar to the respective default platform interface view.

Lists

The list categories and filtered lists that have been configured for customer service agents in CSM workspaces.

Lists and filtered lists for Customer Service agents

List Category	Filtered Lists	Description
Cases	My Cases	Cases assigned to the customer service agent.
	My Open	Open cases assigned to the customer service agent.
	Unassigned for my groups	Cases that belong to any of the customer service agent's groups but have not been assigned to an agent.
	All	All customer service cases.
Major Issue Management	Major Cases	Major cases that have been accepted.
Customer	Accounts	A list of customer accounts.
	Partners	A list of partner accounts.
	Contacts	A list of customer contacts.
	Consumers	A list of consumers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lists and filtered lists for Customer Service agents (continued)

List Category	Filtered Lists	Description
Interactions	My Interactions	Interactions that are assigned to the customer service agent (agent's name appears in the **Assigned to** field on the interaction record).
Knowledge	My Knowledge Articles	Knowledge articles authored by the customer service agent (agent's name appears in the **Author** field). **Note:** This list appears in the list panel when the Knowledge Management Advanced Installer plugin (com.snc.knowledge_advanced.installer) is activated.
Catalog Tasks	Assigned to my groups	Catalog tasks assigned to the current agent's groups.

Note:
Additional filtered lists appear in the list panel when a customer service agent also has the itil role.

Components installed with additional plugins for Customer Service Management

Several types of components are installed with the additional plugins for the Customer Service Management application.

Components installed with additional plugins for CSM

Components installed with CTI Softphone	• Tables • Business rules • Script includes
Components installed with Customer Service CTI Demo Data	Business rules
Components installed with OpenFrame	• Tables • Roles • Business rules • Script includes • UI macros
Components installed with Special Handling Notes	• Tables • Roles

Components installed with CTI Softphone

Several types of components are installed with CTI Softphone.

Note:
Starting with the Zurich release, CTI Softphone Plugin is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Tables installed with CTI Softphone

Tables are added with activation of CTI Softphone.

Tables for activation of CTI Softphone

Table	Description
User CTI Status	Stores the agent's availability status.

Script includes installed with CTI Softphone

Script includes are added with activation of CTI Softphone.

Script include	Description
CTIAjaxUtility	Ajax class that provides helper functions to set and get user states, get incoming call context, log a call, and queue and dequeue a call.

Business rules installed with CTI Softphone

Business rules are added with activation of CTI Softphone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rule	Table	Description
Route available user for Incident Task	User CTI Status [user_cti_status]	Demo business rule to dequeue a call based on matching rules whenever an agent becomes available.

Components installed with Customer Service CTI Demo Data

Several types of components are installed with Customer Service CTI Demo Data.

Note:
Starting with the Zurich release, Customer Service CTI Demo Data Plugin is no longer deployed, enhanced, or supported. For details, see the Deprecation Process [KB0867184] article in the Now Support Knowledge Base.

Business rules installed with Customer Service CTI Demo Data

Business rules are added with activation of Customer Service CTI Demo Data.

Business rule	Table	Description
Route available user for Case Task	User CTI Status [user_cti_status]	Used to dequeue a call whenever an agent becomes available.

Components installed with OpenFrame

Several types of components are installed with OpenFrame.

Tables installed with OpenFrame

Tables are added with activation of OpenFrame.

Tables installed with OpenFrame

Table	Description
Phone Log [sn_openframe_phone_log]	A log of the incoming and outgoing phone calls. This table can be used to log any phone call made or received.
OpenFrame Configuration [sn_openframe_configuration]	Stores the OpenFrame configuration. This is the configuration used to load the OpenFrame in the TopFrame.

Roles installed with OpenFrame

The OpenFrame user role is automatically added when you activate OpenFrame.

Role	Description	Contains role
User [sn_openframe_user]	The OpenFrame user role.	None
User	The OpenFrame API user role	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role	Description	Contains role
sn_openframe_api_user		

Script includes installed with OpenFrame

The OpenFrameAjaxUtility script include is added when you activate OpenFrame.

Script includes for OpenFrame

Script include	Description
OpenFrameAjaxUtility	OpenFrame AJAX utility class that provides functions to get the OpenFrame configuration and also to get and set the last opened frame location.

Business rules installed with OpenFrame

Some related business rules are added when you activate OpenFrame.

OpenFrame business rules

Business rule	Table	Description
Set Agent	Phone Log [sn_openframe_phone_log]	Sets the agent in the Phone Log [sn_openframe_phone_log] table as the current logged-in user if a phone call is logged without an agent.
One Default Configuration	OpenFrame Configuration [sn_openframe_configuration]	Checks that there's only one default OpenFrame configuration. You can't have two OpenFrame configurations if the default option is set to true.
Update Task Work Notes	Phone Log [sn_openframe_phone_log]	Updates the work notes for a specific task whenever a phone call is logged for that task.

UI macros installed with OpenFrame

Related UI macros are added when you activate the OpenFrame plugin.

The UI macros added when you activate OpenFrame plugin are supported under the following conditions:

- The *doctype* property is set to true and the device is not a tablet or mobile.
- The web browser is Internet Explorer 10 or above.

As a system administrator, you can add the following UI macro scripts:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

OpenFrame UI macro scripts

Script include	Description
show_phone	• This macro requires the activation of the OpenFrame plugin. • By configuring this UI macro using the *ref_contribution* parameter, you can display a phone icon next to the sys_user reference field if the phone field in the sys_user record is populated with the user's contact number.
show_phone_customer_service	• This macro requires the activation of the Customer Service Management and the OpenFrame plugins. • By configuring this UI macro using the *ref_contribution* parameter, you can display a phone icon next to the **Contact** customer_account reference field on the case form if the phone field in the Contact customer_account record is populated with the user's contact number.

Displaying the phone icon enables you to make calls using the click-to-call capability in the OpenFrame window. For more information on how to use OpenFrame, see OpenFrame overview.

Components installed with Special Handling Notes

Several types of components are installed with Special Handling Notes.

Tables installed with Special Handling Notes

The tables included with the Special Handling Notes plugin (com.sn_shn).

The Special Handling Notes plugin adds the following tables.

Table	Description
Special Handling Notes [sn_shn_notes]	Stores the special handling notes.
Special Handling Configuration [sn_shn_configuration]	Stores the special handling notes table configurations.

Roles installed with Special Handling Notes

Some user roles are included with the Special Handling Notes (com.sn_shn) plugin.

Special handling notes roles

Role	Description
sn_shn.admin	Can read, create, update, and delete special handling notes. This role contains the sn_shn.editor role. The sn_customerservice_manager role contains the sn_shn.admin role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Special handling notes roles (continued)

Role	Description
sn_shn.editor	Can read and update special handling notes. This role contains the sn_shn.user role. The sn_customerservice_agent role contains the sn_shn.editor role.
sn_shn.user	Can read special handling notes.

Properties installed with Special Handling Notes

Some properties are included with the Special Handling Notes (com.sn_shn) plugin.

The Special Handling Notes plugin adds the following properties.

Special handling notes properties

Property	Description
Maximum number of notes displayed in the Special Handling Notes pop-up window [sn_shn.max_num_alerts]	• **Type**: integer • **Default value**: 20 • **Location**: **Special Handling Notes** > **Properties**
Display special handling notes only once per session [sn_shn.note_preferences]	Special handling notes are displayed each time you access a record. Enable this property to display special handling notes only once per session. • **Type**: true | false • **Default value**: false • **Location**: **Special Handling Notes** > **Properties**
Width of the Special Handling Notes pop-up window in pixels [sn_shn.popup_width]	The width of the Special Handling Notes pop-up window in pixels. The default width is 500. If you specify less that 300, the window automatically uses the minimum width of 300 pixels. • **Type**: integer • **Default value**: 500 • **Location**: **Special Handling Notes** > **Properties**

To learn more about the special handling notes properties, see Configure special handling notes properties.

Business rules installed with Special Handling Notes

The business rules included with the Special Handling Notes plugin (com.sn_shn).

The Special Handling Notes plugin adds the following business rules.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Business rules installed with the Special Handling Notes plugin

Business rule	Table	Description
Updating the table field	Special Handling Notes [sn_shn_notes]	Populates the **Table** field with the table label rather than the whole table name.
SHN Cache Table Entry	Special Handling Notes Configuration [sn_shn_configuration]	Stores the entries in the configuration table in a cache to avoid repeated queries.

Client scripts installed with Special Handling Notes

The client scripts included with the Special Handling Notes plugin (com.sn_shn).

The Special Handling Notes plugin adds the following client scripts.

Client scripts

Client script	Table	Description
On Load Message	Special Handling Notes Configuration [sn_shn_configuration]	On Load Message describing what the Special Handling Notes Configuration table is for. Create a configuration by selecting a table for which special handling notes can be created and displayed. Include notes for related entities by selecting the desired fields and adding them to the configuration.

Script includes installed with Special Handling Notes

The script includes included with the Special Handling Notes plugin (com.sn_shn).

The Special Handling Notes plugin adds the following script includes.

Script includes for special handling notes

Script include	Description
SHNProcessor	A collection of APIs for special handling notes.
SHNTable	Provides a list of tables for which the user can create special handling notes.

Components installed with Targeted Communications

Several types of components are installed with the Targeted Communications application.

Tables installed with Targeted Communications

Tables are added with activation of Targeted Communications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Targeted Communications

Table	Description
Recipients (Users) [sn_publications_recipientslist_user_m2m]	Stores recipients lists of type Internal Users.
Recipients (Accounts) [sn_publications_recipientslist_account_m2m]	Stores recipients lists of type Accounts.
Recipients (Consumers) [sn_publications_recipientslist_consumer_m2m]	Stores recipients lists of type Consumers.
Publication Recipients [sn_publications_publication_contact_m2m]	Stores recipients lists of type Contacts.
Workflow Config [sn_publications_workflow_config]	Workflow configuration page.
Publication [sn_publications_publication]	Stores all publications.
Recipients List [sn_publications_recipients_list]	Stores the recipient lists.
Recurrence [sn_publications_recurrence]	Stores all of the publication recurrences.

Roles installed with Targeted Communications

Roles are added with activation of Targeted Communications.

Roles installed with Targeted Communications

Role title [name]	Description	Contains roles
Publications administrator [sn_publications.admin]	The publications administrator can: • read all publications • create, update, and delete publications • create recurring publications	• sn_publications.author • sn_publications.approver • workflow_publisher • image_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Targeted Communications (continued)

Role title [name]	Description	Contains roles
	• create recipient lists • add or remove approvers to workflows	
Publications author [sn_publications.author]	The publications author can: • read all publications • create, update, and delete publications • create recurring publications • create recipient lists	• sn_publications_recipients_list_user • sn_publications_recipients_user • workflow_publisher • image_admin • sn_esm_agent
Publications approver [sn_publications.approver]	The publications approver can approve publications.	approver_user
Recipients list user [sn_publications_recipients_list_user]	The recipients list user can create and view recipient lists.	None
Recipients user [sn_publications_recipients_user]	The recipients user can view recipient lists.	None

Properties installed with Targeted Communications

Properties are added with activation of Targeted Communications.

Note:
To open the System Property [sys_properties] table, enter `sys_properties.list` in the navigation filter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
sn_publications.max_email	Limits the number of email recipients. • **Type**: integer • **Default value**: 100000 • **Location**: System Property [sys_properties] table

Components installed with Knowledge Product Entitlements

Several types of components are installed with the Knowledge Product Entitlements application.

Business rules installed with Knowledge Product Entitlements

Business rules are added with activation of Knowledge Product Entitlements.

Knowledge Product Entitlements business rules

Business rule	Table	Description
Knowledge Product Entitlement	Knowledge [kb_knowledge]	Implements the needed access controls for users with the sn_customerservice.customer role.
KB Product Entitlements	Knowledge Base [kb_knowledge_base]	

Properties installed with Knowledge Product Entitlements

Properties are added with activation of Knowledge Product Entitlements.

Properties added with Knowledge Product Entitlements

Property	Description
kb_product_entitlement.knowledge_base.enable	Enable access control of Knowledge Bases based on product entitlements. If enabled, customers can access all of the knowledge bases related to the products for which they have entitlements. • **Type**: true/false • **Default value**: false • **Location**: **Knowledge Product Entitlements** > **Properties**
kb_product_entitlement.knowledge_base.allow_empty_products	Allow access to Knowledge Bases with empty **Related Products** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties added with Knowledge Product Entitlements (continued)

Property	Description
	If enabled, customers can access all knowledge bases even if no products have been specified in the **Related Products** field on the Knowledge Base form. • **Type**: true/false • **Default value**: false • **Location**: **Knowledge Product Entitlements** > **Properties**
kb_product_entitlement.article.enable	Enable access control of Knowledge Articles based on product entitlements. If enabled, customers can access all of the knowledge articles related to the products for which they have entitlements. • **Type**: true/false • **Default value**: false • **Location**: **Knowledge Product Entitlements** > **Properties**
kb_product_entitlement.article.allow_empty_products	Allow access to Knowledge Articles with empty **Related Products** field. If enabled, customers can access all knowledge articles even if no products have been specified in the **Related Products** field on the Knowledge form. • **Type**: true/false • **Default value**: false • **Location**: **Knowledge Product Entitlements** > **Properties**

Components installed with Self Service Password Reset

Several types of components are installed with Self Service Password Reset.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Script includes installed with Self Service Password Reset

Script includes are added with activation of Self Service Password Reset.

Script includes for self service password reset

Script include	Description
PasswordResetAJAX	AJAX Script to process a password reset from a UI Page as guest.
ResetPwdAjaxProcessor	

Components installed with Engagement Messenger

Several types of components are installed with activation of the Engagement Messenger application, including plugins, tables, and user roles.

Roles installed

Roles installed with the activation of the Engagement Messenger application

Role title [name]	Description	Contains roles
Engagement Messenger admin [sn_csm_ec.ec_admin]	Creates and edits configurations for Embedded Messenger modules	• sn_csm_ec.ec_read • snc_platform_rest_api_access • virtual_agent_admin • image_admin • sp_admin • ais_admin • catalog_builder_editor
Engagement Messenger read [sn_csm_ec.ec_read]	Can view existing configurations for Embedded Messenger modules **Note:** This role should only be assigned to internal users.	None

Tables installed

Tables added with the activation of the Engagement Messenger application

Table	Description
Chat Feature Instance [sn_csm_ec_chat_instance]	Stores configuration details of the Chat feature of the messenger modules.
Engagement Messenger Module [sn_csm_ec_engmnt_center_module]	Stores the list of all messenger modules.
Feature	Stores the feature definitions for the messenger.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables added with the activation of the Engagement Messenger application (continued)

Table	Description
[sn_csm_ec_feature]	Every feature instance of a messenger module is created from its feature definition.
Feature Instance [sn_csm_ec_feature_instance]	Stores the details of feature instances of the messenger module.
Greeting Feature Instance [sn_csm_ec_greeting_instance]	Stores configuration details of the Greeting feature of the messenger modules.
Knowledge Feature Instance [sn_csm_ec_knowledge_instance]	Stores configuration details of the Knowledge feature of the messenger modules.
Search Feature Instance [sn_csm_ec_search_instance]	Stores configuration details of the Search feature of the messenger modules.

Properties installed with Engagement Messenger

Engagement Messenger properties

Property	Description
com.glide.cs.embed.csp_frame_ancestors	After activating the Glide Virtual Agent plugin (com.glide.cs.chatbot), you must use the *com.glide.cs.embed.csp_frame_an* system property to enable the configuration o frame-ancestors policy for the website where to host Engagement Messenger. Set the value of the *com.glide.cs.embed.csp_frame_an* system property 'self' <your website URI example, 'self' https://www.example.c • Type: string • Value: self • Location: System Properties
glide.authenticate.multisso.enabled	Set the *glide.authenticate.multisso.ena* system property to true to enable multiple pro SSO. • Type: true | false • Value: self • Location: System Properties

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Engagement Messenger properties (continued)

Property	Description
	Note: If you want to enable only a guest user ex for your customer service portal, you can this configuration.
User session time-out *glide.ui.session_timeout*	Set a user session timeout value for the *glide.ui.session_timeout* system pr to a value that is greater than or equal to your time-out. • Type: integer • Value: 30 • Location: System Properties **Note:** If you want to enable only a guest user ex for your customer service portal, you can this configuration.
sn_customerservice.emails.customportal	Set the URL of your third-party customer supp so that the notification emails that your custor contain URLs that redirect them to the exact re record that they submitted. These notification emails are sent in scenario submitting a case, requesting a service, reque field technician, or booking a walk-up appoint • Type: string • Value: None • Location: System Properties For example, if your customer support portal is `https://www.example.com/support` then set the property value to `https://www.example.com/support`.
sn_csm_ec.proactive_inactivity_time	Set the inactive period (in seconds) to trigger help in Engagement Messenger. • Type: integer • Value: 2 • Location: System Properties
glide.knowman.serviceportal.use_numbered_url	The property contains a comma-separated lis service portal record sys_ids. For any portal re specified in this property, the article link will b displayed with the sysparm_number URL para instead of sys_kb_id.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Engagement Messenger properties (continued)

Property	Description
	• Type: string • Value: None • Location: System Properties

Plugins installed

- Customer Service (com.sn_customerservice)
- Integration - Multiple Provider Single Sign-On Installer (com.snc.integration.sso.multi.installer)

Components installed with Case lines and workflows

Several types of components are installed with the Case lines and workflows application, including tables and roles.

Tables

Case Lines and workflows tables

Table	Description
Case Line [sn_case_line]	The Case Line table stores case line item records that are created for parent cases. This table extends the Case table. The prefix for case line records is **CSL**.
Case Line Task [sn_case_line_task]	The Case Line Task table stores the tasks related to case line items. This table extends the Case Task table. The prefix for case line task records is **CSLTASK**.
Case Line Characteristic [sn_case_line_characteristic]	The Case Line Characteristic form displays details about the product offering included in a case line. The prefix for case line characteristic records is **CSLC**.
Case Line Entitlement [sn_case_line_entitlement]	The Case Line Entitlement table stores the entitlements that are associated with case line items.

Roles

The Case Lines and workflows application includes roles that provide access to case line item and case line characteristic records. It also updates some existing roles to provide this same access.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case lines and workflows roles

Role	Description	Includes roles
sn_case_line.characteristic_creator	This user can create case line characteristic records if they have access to the parent case line item record.	sn_case_characteristic_viewer
sn_case_line.characteristic_writer	This user can update case line characteristic records if they have access to the parent case line item record.	sn_case_characteristic_viewer
sn_case_line.characteristic_deleter	This user can delete case line characteristic records if they have access to the parent case line item record.	sn_case_characteristic_viewer
sn_case_line.characteristic_viewer	This user can view case line characteristic records if they have access to the parent case line item record.	
sn_case_line.characteristic_report_viewer	This user can view reports for the case line characteristic table if they have access to the parent case line item record.	
Case task agent [sn_customerservice.case_task_agent]	This is an existing role. The case task agent has read, write, and create access for case line tasks: • If the case task agent is the assigned user on the case task (assigned_to). • If the case task agent belongs to the same assignment group as the assigned user. The case task agent has read access to the following: • The parent order case and the case line items. • The case line characteristic if they have read access to the associated case line item. • Account and contact records for the parent order case.	• sn_customerservice.csm_workspace_user • sn_customerservice.customer_data_viewer • sn_customerservice.case_contributor_editor • sn_csm_case_types.service_definition_viewe

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case lines and workflows roles (continued)

Role	Description	Includes roles
	The case task agent can update the work notes, comments, attachments, and watch list of the parent order case and the case line items.	
Customer service agent [sn_customerservice_agent]	This is an existing role. The customer service agent role has read, write, and update permissions for the following tables: • Case Line • Case Line Task • Case Line Characteristic	For more information, see Roles installed with Customer Service Management.

Properties

Case Lines and workflows properties

Property	Description
sn_customerservice.advanced_entitlements	Displays the Entitlements related list on the Case Line form. • True: the related list is visible. • False: the related list is hidden. This property applies to both CSM Configurable Workspace and Core UI.

Email Interaction for CSM reference

Reference topics provide additional information about Email Interaction for CSM.

Contact form for Email Interaction for CSM

The Contact form enables you to add the customer contact to the interaction record.

Contact form

Field	Description
First name	First name of the customer contact.
Last name	Last name of the customer contact.
Account	Account with which the customer contact is associated.
Title	Title of the customer contact.
Language	Preferred language of the customer for all communications and interactions.
Email	Email address of the customer contact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact form (continued)

Field	Description
Business phone	Business phone number of the customer contact.
Mobile phone	Mobile phone number of the customer contact.
Time zone	Time zone of the customer contact.
Notification	Enable notifications for the customer contact using the drop-down list.

Related topics

Create a customer contact

Email interaction sections

The Email interaction sections enable you to manage information within the interaction record.

Contact form

Field	Description
Name	Name of the customer contact.
Mobile phone	Mobile phone number of the customer contact.
Business phone	Business phone number of the customer contact.
Email	Email address of the customer contact.
Street	Name of the street.
City	Name of the city.
State/Province	Name of the state or province.
Account	Account with which the customer contact is associated.

Contact lookup

Field	Description
Lookup by name, phone, or email	The contact lookup component enables agents to do the following: • Look up a contact by name, phone number, or email address. As the agent types characters in the search box, matching information appears in record cards below the search box. • Select a contact after searching by selecting the record card. The selected record card replaces the lookup component. You can also create a record to add a guest user as a contact. For more information, see Create a customer contact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Interaction form

Field	Description
Number	Automatically created interaction number.
Type	Type of customer interaction, which is **Email**.
Account	Name of the customer contact's company. This field is filled in automatically if the information is available in the contact record.
Contact	Name of the customer contact.
Consumer	Name of the consumer.
Guest Email	Email ID of the guest user.
Verified	Option to mark the record as verified or validated.
State	Current state of the interaction. For more information, see Interaction states.
Assigned to	Name of the assigned user.
Consumer Profile	Information about the consumer.
Short description	Brief description of the customer issue.
Work notes	Information about the interaction and the work being done to resolve the customer issue.

Compose and Activity stream

Application	Description
Work notes	Internal notes documented for agent's reference. These notes are visible only to agents and not to the customer. When a work note is created, it appears in the Activity stream. For more information on work notes, see Compose a work note for internal use.
Email	Compose and send emails without leaving the record. For more information, see Compose an email response. **Note:** The first email response that the agent sends is used to calculate the first response time duration, which is then populated in the **First response wait time** field.
Filters	Enables you to filter emails, work notes, and field changes on the interaction.
Activity	Enables agents to view the email conversations between the agent and customer. For more information, see Using the activity stream in an email interaction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Apps on contextual side panel

Application	Description
Attachments	Displays files and documents associated with the current record or interaction.
Recommended Actions	Displays the most relevant next steps based on the current context. For more information, see Using the Recommended Actions application.
Consumer Verify	Confirms the identity or details of the consumer involved in the interaction. For more information, see Lookup and verify.
Contact Verify	Confirms the identity or details of the contact involved in the interaction. For more information, see Lookup and verify.
Response Template	Displays the response template required to respond to the customer. For more information, see Use a response template to compose an email or a work note.
Related Lists	Displays associated items such as emails, tasks, knowledge articles, and open cases linked to the current interaction. • Related Email Interactions: Lists the email interactions linked to the current interaction. • Emails: Displays all the emails associated with the interaction. • Draft Emails: Find emails that are currently being drafted and not yet sent. • Related Tasks: Lists all cases created out of an interaction. • Related Knowledge Articles: Displays relevant knowledge articles that can provide further information related to the interaction. • Open Cases: Shows any open cases that are related to the consumer or contact.
Customer History	Displays customer, consumer, or account history information, depending on the customer information provided on the interaction record. This tab includes a search field, filter, and date range selector that agents can use to find specific information in the history. For more information on the customer history, see Customer History component features.

UI Actions

Application	Description
Create Case	Enables the creation of a new case from the interaction.
Close	Closes the email interaction.
Save	Saves the updates made in the email interaction.
Associate Record	Enables associating the existing cases with the current interaction.
Assign to me	Assigns the interaction to the current agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI Actions (continued)

Application	Description
	Note: Assign to me is visible only in interactions in the New state and with the Assigned to field as empty.

Engagement Messenger translation tables

Engagement Messenger uses the [sys_translated_text] and [sys_ui_message] tables to store translated text.

Each translated field on every row has one or more entries in the this table, one per language for which ServiceNow provides a translation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Translation tables used by Engagement Messenger

Table	Description
Translated Text [sys_translated_text]	Stores translations for configurable fields such as User Greeting and Search Message. These fields are configured in Engagement Messenger module configuration and have the field type `translated_text`. The main fields of this table are: • **Document**: Internal identifier of the feature instance record this translation applies to. • **Field name**: Title or subtitle field from feature instance record. • **Language**: Language the text is translated into. • **Table Name**: Name of the feature instance. • **Value**: Translated text that the user sees. For details about translating text content into different languages, see Translated text table and Translating text fields.
Message [sys_ui_message]	Stores translations for static messages in Engagement Messenger. For more information about the Message table, see Message table.

Note:
For information about Virtual Agent chat translation, see Virtual Agent translation tables

Customer Contracts and Entitlements reference

Reference topics provide additional information on service contract life cycle and forms available within the Customer Contracts and Entitlements application.

What to explore next

To learn more about configuring and using Customer Contracts and Entitlements, see:

- Configure Customer Contracts and Entitlements
- Using Customer Contracts and Entitlements

Service contract life cycle

A service contract goes through the various states in each phase of its life cycle.

In each state, a service contract is enabled to perform certain actions as mentioned in the following table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service contract life cycle, related states, and actions that it can perform

Life-cycle	State	Action
A service contract is generated.	Draft	• The start and end dates of the service contract can be modified such that the child records' dates are within the date range. • The related contract lines and entitlements can be added, removed, or modified. • The sold product/install base item covered can be added or removed.
Service contract gets activated on the date of activation.	Active	• Modifications to the service contract can be done manually, via integration and via Sales Customer Relationship Management workflow. • The start date can't be modified. • The end date can be extended and should be greater than the current date. • Service contract line items can be added. • The sold product/install base item covered can be modified.
Service contract is deactivated on the date of expiration.	Expired	No action.
Service contract is canceled.	Canceled	No action.

The service contract line items and entitlements also perform similar actions in the respective states.

When a parent entity moves to the Expired state, the child entities inherit the same state. For example, when a service contract expires, the related contract lines and entitlements also expire.

However, the state change of a child entity doesn't affect it parent entity.

The sold product or install base item referenced either in the contract line or an entitlement must be in the same state as the entity where it's referenced.

Suspended state

When a sold product is suspended, the related service contract lines and entitlements, in the Draft or Active states, move to the Suspended state as well.

A suspended service contract line or entitlement is paused for any activity, except the following:

- Editing the field values.
- Creating records in the corresponding related lists.

On resuming the sold product, the related service contract line item or entitlement acquires the state depending on its start and end dates. For example, a resumed entitlement that has its start date in the past and its end date in the future, acquires the Active state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exceptionally, when a contract line or entitlement in the Suspended state has reached its end date, it moves to the Expired state automatically.

Date validations

A service contract line associated with a service contract must be created within the service contract's start and end dates. Any modification to the dates of service contract lines must comply with the date range of the parent service contract.

Service contract form

The Customer Contracts and Entitlements application uses the Service contract form to create service contracts.

Service Contract form

Field	Description
Name	The name of the service contract.
Number	The internal unique identification number that is generated when the service contract is created. This number isn't editable.
Contract Reference	The externally assigned identification number assigned to the service contract.
Account	The name of the account associated with the service contract. **Note:** • A service contract can be associated with either an account or a consumer. • An account can be created if no account is found by selecting **New** on the Account form. For more information on the fields in the Account form, see Account form.
Consumer	The name of the consumer associated with the contract. **Note:** If no consumer record is found, you can create a consumer and add it to the service contract. For more information, see Create a consumer record.
State	The current state of the service contract: • Draft • Active • Expired • Canceled • Suspended
Start date	The activation date of the service contract.
End date	The date when the service contract ends.
Renewal root	A service contract can be renewed multiple times. Renewal root refers the service contract reference of the first or base service contract.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Contract form (continued)

Field	Description
Renewed from	A service contract can be renewed multiple times. Renewed from field refers to the previous service contract that was renewed.

Service contract line form

You can create service contract lines in the Customer Contracts and Entitlements application by using the Service Contract Line form.

Service Contract Line form

Field	Description
Name	The name of the service contract line.
Contract	The internal unique identification number that is generated when the service contract is created. This number isn't editable.
Parent contract line	The internal unique identification number of the parent service contract line that is associated with the child service contract line.
Account	The name of the account associated with this service contract. **Note:** • A service contract can be associated with either an account or a consumer. • An account can be created if no account is found by selecting **New** on the Accounts form. For more information on the fields in the Account form, see Account form.
Location	The service or installation location.
Product specification	The product specification that is mapped to the sold product.
Number	The internal unique identification number of the service contract line that is generated when it is created. This number isn't editable.
Consumer	The name of the consumer associated with this contract. **Note:** If no consumer record is found, you can create a consumer and add it to the service contract. For more information, see Create a consumer record.
State	The current state of the contract line: • Draft • Active • Expired • Canceled • Suspended

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service Contract Line form (continued)

Field	Description
	Note: • The state of the service contract line is inherited from its parent service contract. • Suspended state is only applicable when the contract line item is created via the Sales Customer Relationship Management workflow.
Start date	The date of activation of the service contract line.
End date	The date when the service contract line expires.
Product	The product model that is mapped to the product offering for the sold product.
Product offer	The product offering that is mapped to the sold product.
Sold product	The name of the sold product that is added to the contract line. **Note:** • When the service contract line item is created via the Sales Customer Relationship Management workflow, this field displays the sold product name from which the contract line is generated. • When service contract lines are created via integration, the field becomes invalid.
Renewal root	A service contract line can be renewed multiple times. Renewal root refers the service contract line reference of the first or base service contract line.
Renewed from	A service contract line can be renewed multiple times. Renewed from field refers to the previous service contract line that was renewed.

You can see the pricing information on a contract line for subscription contracts that helps you in reviewing your contract information.

Subscription & Pricing

Term (Months)	Validity period of having access to the service or product.
Subscription Start Date	Start date of the contract subscription.
Subscription End Date	End date of the contract subscription.
Price List	Price list associated for servicing the product.
Unit net price	The price for each unit within the product offering. The net price of a single unit of the sold product.
Pricing method	The pricing method for the selected sold product. It can be one-time or recurring. One-time pricing charges one fee for the product offering. Recurring pricing lets you set the pricing periodicity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Subscription & Pricing (continued)

Periodicity	The frequency of the pricing method. It can be monthly, quarterly, semiannually, or annually. This field becomes valid only when the method in the **Pricing method** field is a recurring payment.
One Time Price	Represents one-time charges to be paid for the product or service.
Monthly Recurring Price	Represents the price that the customer is supposed to pay monthly during usage of the product.
Annual Recurring Price	Represents the price to pay annually during usage of the product.
Cumulative one-time price	Represents one-time charges to be paid for the parent line and all the child line items.
Cumulative monthly recurring price	Represents monthly price for the parent line and all the child line items
Cumulative annual recurring price	Represents annual price for the parent line and all the child line items.
Cumulative net price	Represents the total price of the contract line by calculating the roll-up amount of all root lines.

Note:
When a service contract line item is created manually, the **Pricing method**, **Unit net price**, and **Periodicity** fields are invalid. They're only applicable when the contract line is created by the Sales Customer Relationship Management workflow or by integration. In that case, these fields are auto-populated with the details from the related sold product. The start and end dates of a child service contract line must be in between the start and end date of the associated parent service contract line.

Entitlement form

The Entitlement form can be used to create entitlements in Customer Contracts and Entitlements.

Entitlement form

Field	Description
Name	The name of the entitlement.
Product	The product associated with the entitlement.
Contract	The internal unique identification number that is generated when the service contract is created. This number isn't editable.
Account	The name of the account associated with this contract.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Entitlement form (continued)

Field	Description
	Note: • A service contract can be associated with either an account or a consumer. • An account can be created if no account is found by selecting **New** on the Accounts form. For more information on the fields in the Account form, see Account form.
Location	The service or installation location.
Product specification	The product specification that is mapped to the sold product. **Note:** Configure this field manually on the entitlement form using form layout.
Consumer	The name of the consumer associated with this contract. **Note:** If no consumer record is found, you can create a consumer and add it to the service contract. For more information, see Create a consumer record.
Service contract line	The name of the related service contract line.
State	The current state of the entitlement: • Draft • Active • Expired • Canceled • Suspended **Note:** The state of the entitlement is inherited from its parent contract line.
Start date	The entitlement activation date.
End date	The date when the entitlement ends.
Sold entitlement	The name of the sold product that is added to the entitlement. **Note:** • If the entitlement is created manually, this field remains read-only. • The field must have the same state as its related entitlement. • The field becomes invalid when entitlements are created via integration.
Product offer	The product offering that is mapped to the order line item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Entitlement form (continued)

Field	Description
Renewal root	An entitlement can be renewed multiple times. Renewal root refers the entitlement reference of the first or base service entitlement.
Renewed from	An entitlement can be renewed multiple times. Renewed from field refers to the previous entitlement that was renewed.

You can see the pricing information on an entitlement for subscription contracts that helps you in reviewing your contract information.

Subscription & Pricing

Term (Months)	Validity period of having access to the service or product.
Subscription Start Date	Start date of the contract subscription.
Subscription End Date	End date of the contract subscription.
Price List	Price list associated for servicing the product.
Unit net price	The price for each unit within the product offering. The net price of a single unit of the sold product.
Pricing method	The pricing method for the selected sold product. It can be one-time or recurring. One-time pricing charges one fee for the product offering. Recurring pricing lets you set the pricing periodicity.
Periodicity	The frequency of the pricing method. It can be monthly, quarterly, semiannually, or annually. This field becomes valid only when the method in the **Pricing method** field is a recurring payment.
One Time Price	Represents one-time charges to be paid for the product or service.
Monthly Recurring Price	Represents the price that the customer is supposed to pay monthly during usage of the product.
Annual Recurring Price	Represents the price to pay annually during usage of the product.
Cumulative one-time price	Represents one-time charges to be paid for the parent line and all the child line items.
Cumulative monthly recurring price	Represents monthly price for the parent line and all the child line items
Cumulative annual recurring price	Represents annual price for the parent line and all the child line items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Subscription & Pricing (continued)

Cumulative net price	Represents the total price of the contract line by calculating the roll-up amount of all root lines.

Sold Product Covered form

The Customer Contracts and Entitlements application uses the Sold Product Covered form to add sold products or install base items that are covered to the Customer Contracts and Entitlements entities.

For information about adding sold products or install base items that are covered, see Add a sold product or install base item to a service contract.

Sold Product Covered form

Field	Description
Contract	The reference number of the associated service contract.
Sold Product	The products that are sold to a customer. **Note:** • The list of sold products is filtered based on the account related to the contract or entitlement. • If a product is added, the **Install Base Items** field is automatically removed. • If a product isn't listed, you can add it. Select **New** in the Sold Products window. For more information, see Create a sold product.
Install Base Item	The related install base item. **Note:** • The list of sold products is filtered based on the account related to the contract or entitlement. • If an install base item is added, the **Sold Product** field is automatically removed. • If an install base item isn't listed, you can add it. Select **New** in the Install Base Item window. For more information, see Create an Install base item.
Service contract line	The associated service contract line reference.
Entitlement	The associated entitlement reference.
Date added	The date that the product is added to the entity.
Date removed	The date until which the product is active on the entity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The activation time period for the sold product or install base item covered must comply with the related entity's activation period.

Roles required for B2B2C data models

With the B2B2C model, organizations across industries can easily configure multi-level customer relationships and support business customers who, in turn, support their end consumers.

Customer data models for B2B2C require different roles, depending on the tasks you perform.

Roles required

Role	Tasks
sn_customerservice_agent (customer service agent)	Create a case for an account consumer from platform or Customer Service Management (CSM) workspaces to track issues. See Create cases for an account consumer.
awa_agent and sn_customerservice_agent	Accept a chat request on CSM workspaces and create a case from the chat interaction.
sn_customerservice_manager (customer service manager)	Associate consumers to an account to identify the end consumers who are using products or services. Associate install base items/sold products with account consumers to track the end consumer issues.
sn_acct_consumer.consumer (account consumer)	View sold products/install bases items to track the instances provisioned for your account and the products or services sold to your account. Create a case for install base items or sold products issues from the CSM portal. You get email notifications when a case is created, commented, resolved, or closed. See Create a case from the CSM portal.
sn_customerservice.customer (account contact)	View sold products/install bases items to track end consumer issues. SeeView install base information from the Customer Service Portal and View products information from the Customer Service Portal. Create a case for an account consumer to track consumer issues. See Create cases for an account consumer.

Roles for Outsourced Customer Service

Outsourced Service Providers (OSPs) are organizations that an enterprise engages to provide customer service to external customers. The OSPs manage cases for customers associated to their organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

There are various roles required based on the tasks you perform.

Roles required

Role	Description
sn_csm_ocs.ext_manager (external OSP manager)	Onboard agents from service providers they belong to along with managing case assignments.
sn_csm_ocs.ext_agent (external OSP agent)	Agents can fulfill the cases belonging to the service provider organization they belong to.
sn_csm_ocs.manager (internal OSP manager)	Manages and monitors all the activities performed by OSPs. The manager can also access the OSP dashboards and act as an internal point of contact for the organization.

Note:
OSP agents and managers can perform their designated tasks using UI16 interfaces, as workspaces aren't supported at the moment.

Data classification for Install Base Management

Enable customers to automatically classify sensitive data for their workflows. After data is classified, users can view the type of classification associated to different fields, whether internal, restricted, confidential, or public.

List of sensitive fields for sold products and install base

Table	Field	Plugin from which the field is coming	Classification
Sold product table (sn_install_base_sold_product)	offering_type	Product Catalog Management core (sn_prd_pm)	Internal
Sold product table (sn_install_base_sold_product)	relationship_type	Product Catalog Management core (sn_prd_pm)	Internal
Sold product table (sn_install_base_sold_product)	unit_of_measurement	Product Catalog Management core (sn_prd_pm)	Confidential
Sold product table (sn_install_base_sold_product)	product_specification	Product Catalog Management core (sn_prd_pm)	Internal
Sold product table (sn_install_base_sold_product)	periodicity	Product Catalog Management core (sn_prd_pm)	Confidential

Glossary Customer Service Management

Learn about the terms and concepts that are unique to Customer Service Management.

A

Glossary terms are grouped alphabetically.

auto responder

Feature that automatically sends email notifications to customers and watch list members when a new case is created. Auto-Responder suggests content by comparing the short description of a case with those of existing knowledge articles.

To learn more about auto-responder notifications, see Configure Auto-Responder notifications.

advanced work assignment

Capability that automatically assigns work items to agents based on their availability, capacity, and skills. Advanced Work Assignment pushes work items such as cases, chats, or tasks, to qualified agents using work item queues, routing conditions, and configurable assignment criteria.

To learn how to configure Advanced Work Assignment, see Configure Advanced Work Assignment for routing email interactions.

Also known as

AWA

work assignment

routing

asset contact relationship

Relationship between an asset related to a customer account and one or more customer contacts. This relationship limits access to the asset information to the assigned contacts.

To learn about asset relationships, see Create asset contact relationships.

auto routing

Automatically directing records to the appropriate agent based on predicted values.

To learn more about auto routing, see Using Auto-Responder for case deflections.

Also known as

auto routing

B

Glossary terms are grouped alphabetically.

business location

A business location enables you to model both internal and external organizational structures, ensuring customers are properly supported while giving agents the right level of visibility into customer data.

To learn more about business locations, see Business Location 360 components.

Also known as

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

BL

business portal

Self-service web portal for B2B customers, providing integrated access to knowledge articles, community forums, service catalogs, and chat bots, enabling customers to browse products, place orders, and manage order cases.

To learn more about using the business portal, see Using the Business Portal.

C

Glossary terms are grouped alphabetically.

customer data model

A customer data model is a structured framework that defines how customer-related information is stored, organized, and managed across an organization. It standardizes key data elements such as customer profiles, accounts, contacts, and relationships, ensuring consistency and accuracy across systems.

To learn more about customer data models for B2B2C, see Customer Data Models for B2B2C.

Also known as

CDM

community properties

Configurable attributes that define the behavior, appearance, and access controls of a ServiceNow Community instance. These properties govern how users interact with the community portal, including settings for moderation, content visibility, user roles, engagement metrics, and integration with knowledge bases or case management systems.

To learn more about communities, see Exploring Communities.

community setup

Configuration of the ServiceNow Community platform, where users can engage in peer-to-peer support, share knowledge, and collaborate on product-related topics. It involves defining community properties, assigning roles such as moderators and contributors, and integrating the community with knowledge bases and case management systems.

community moderation

Structured process of managing user-generated content within the ServiceNow Community to ensure quality, relevance, and adherence to platform guidelines. Moderators review unanswered questions, assign them to appropriate experts, and provide follow-up actions such as requesting clarification, linking to documentation, or marking solutions.

To learn more about configuring moderation filers, see Moderate a community.

computer telephony integration

Feature that customers can use to integrate the Customer Service Management (CSM) with telephony providers, enabling agents to handle inbound and outbound calls, identify customers quickly, and capture case information.

Also known as

CTI

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

channel partners

External organizations like resellers or system integrators that collaborate with an enterprise to sell products and services, and can be managed through Partner Relationship Management.

To learn more about channel partners, see Partner Relationship Management.

customer central

Unified view of customer data, combining self-service and live interactions, customizable to include metrics like customer health and churn risk. Customer central consolidates customer data such as account details, interaction history, and self-service actions into a single interface.

To learn more about customer central, see Customer Central.

case workflows

Sequence of steps and tasks designed to manage and resolve a case from initiation to closure. Case workflows automate processes such as case creation, routing, task assignment, and resolution tracking to ensure consistency, efficiency, and compliance. They provide agents with a guided path to handle customer issues, leveraging automation to reduce manual effort and accelerate resolution.

To learn more about case workflows, see Case management for Customer Service Management.

Also known as

case management

routing

case type

Categories of cases with specific data and processes required to resolve different types of issues, supporting varied departmental or product-specific processes.

To learn more about case types, see Customer service case types.

category filters

Filters that help users narrow down the available items in the service catalog based on specific categories.

connect workspace

Workspace to enhances the efficiency of customer service agents. It provides a unified interface where agents can manage and respond to chat requests, voice calls, and other customer interactions seamlessly.

D

Glossary terms are grouped alphabetically.

demand forecasting

Predicts future customer service demand by leveraging historical interaction data to generate accurate volume forecasts.

To learn more about demand forecasting, see Demand Forecast in Workforce Optimization for Customer Service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

E

Glossary terms are grouped alphabetically.

entitlement

Specific services, support levels, or product access a customer is eligible for based on their service contract, subscription, or purchase history. It acts as a rule-based framework that governs whether a customer is authorized to receive assistance or access certain features, ensuring service delivery aligns with contractual obligations.

F

Glossary terms are grouped alphabetically.

field technician

Service professional who travels to customer sites to address customer issues. Responsible for installation, maintenance, troubleshooting, and servicing installed products at customer locations.

G

Glossary terms are grouped alphabetically.

gamification

Use of game-like elements and principles such as points, badges, leader boards, levels, and challenges into non-game environments to enhance engagement, motivation, and participation.

To learn more about gamification, see Administer gamification.

I

Glossary terms are grouped alphabetically.

internal data

Information about people within the organization, such as managers, agents, and employees. Internal users can belong to different user groups and be assigned roles such as customer or consumer service agents and managers. This data is essential for identity management, access control, collaboration, and compliance with organizational policies.

install base management

The install base management helps track the products and services that are purchased by a customer along with the detailed configuration for each installed item. It provides a structured way to monitor customer assets, their configurations, and usage details, enabling proactive service operations and improved customer experience.

To learn more about Install Base Management, see Data management for Customer Service Management.

Also known as

install base

IB

IBM

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

install base characteristics

Attributes associated with an install base item that provides detailed information about its configuration and service requirements. These characteristics help organizations manage product-specific details for proactive service operations, case management, and maintenance workflows.

To learn more about the attributes, see Install base characteristics.

Also known as

IB characteristics

intelligence solutions

AI-driven tools that enhance the application through machine learning, search automation, and natural language processing.

To learn more about intelligence solutions, see Intelligence.

Also known as

intelligence

predictive intelligence

incident

A record that documents a disruption or potential disruption to a service.

K

Glossary terms are grouped alphabetically.

knowledge base

Repository of articles and information that helps agents and customers resolve issues. Contains categorized articles that address common issues, provide guidance, and support case resolution, and can be configured for internal use by agents or externally for customers.

knowledge workflow

Process and steps that involve creating, reviewing, publishing, and maintaining knowledge articles within the Knowledge Base.

To configure a knowledge workflow, see Activate Now Assist Skills.

Also known as

knowledge generation

knowledge base

knowledge product entitlement properties

Settings and configurations that define the permissions and access rights for users to specific knowledge articles or products.

To install entitlement properties, see Components installed with Knowledge Product Entitlements.

L

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

list control

Settings that determine how related lists are displayed and managed within forms, including options to enable or disable editing.

M

Glossary terms are grouped alphabetically.

moderator

User responsible for overseeing community interactions and ensuring compliance with guidelines.

moderation filters

Configurable criteria used to identify and manage community content that requires moderator attention. These filters help surface unanswered questions, flagged posts, or discussions that meet specific conditions such as inactivity, sentiment score, or topic relevance allowing moderators to prioritize and respond effectively.

moderation tasks

Structured activities and responsibilities undertaken by a moderator to manage community content. These tasks ensure that the session runs smoothly, participants remain engaged, and data collected is accurate and actionable.

N

Glossary terms are grouped alphabetically.

Now Assist

Refers to generative AI experiences on the ServiceNow AI Platform. With Now Assist, you can improve productivity and efficiency in your organization with better self-service, faster answers and recommended actions, and empower users to search more effectively.

To learn more about Now Assist, see Exploring Now Assist for Customer Service Management (CSM).

O

Glossary terms are grouped alphabetically.

outsourced service provider

A third-party organization contracted to deliver services on a company's behalf, such as customer support or field services, operating under agreed service levels and policies.

omni-channel support

Unified communication system that enables customers to interact with service teams across multiple communication channels such as email, chat, phone, and messaging apps while maintaining a seamless and consistent experience.

To learn more about omnichannel, see Omnichannels for communicating with customers.

also known as

omnichannel engagement

communication channels

unified communication

process mining

A business intelligence tool to identify inefficiencies and bottlenecks by creating process maps. Process mining helps visualize process execution, discover root causes of performance issues, and automate data-driven improvements.

To learn more about process mining, see Integrating with Process Mining.

Also known as

process optimization

proxy contact

Role or function within an organization that allows certain employees to act on behalf of others, typically in customer service or case management scenarios. This role enables employees to perform tasks such as creating, viewing, and managing cases for customers or partners, even if they do not have direct access to the customer's account. The purpose of this role is to facilitate efficient handling of customer interactions and ensure that cases are managed effectively.

Q

Glossary terms are grouped alphabetically.

quick start test

Tests that you can use to validate your instance after making configuration changes such as applying an upgrade or developing an application. Copy and customize the quick start tests included with an application and run them with the default demo data provided with the application plugin.

R

Glossary terms are grouped alphabetically.

resolution notes

Notes added to an incident when it is resolved, detailing the solution.

also known as

resolution comments

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

reverse matching

Process in which incoming records, such as customer service cases or incidents, are compared against existing records in the system. This comparison helps identify duplicates or related items, ensuring that similar issues are grouped together and handled efficiently.

To learn more about reverse matching, see Reverse matching.

Also known as

reverse search

matching

record categorization

Process of using machine learning models to evaluate text and predict field values on case and interaction records.

S

Glossary terms are grouped alphabetically.

service contract

It is a contract between a seller and a customer that represents products and services sold under agreed terms and conditions, prices and period.

service catalog

Enables organizations to provide their customers with self-service opportunities from customer portals. A service catalog can include different types of catalog items such as goods or services, order guides, and record producers that enable users to create records. Customers can access service catalogs from customer portals to make requests and track request status.

To learn more about service definitions for catalogs, see Service definitions with catalog items.

service definition

Specifications of service requests tied to particular case types, connecting products, services, and case types to facilitate quick access for agents and customers.

To learn more about service definitions, see Service definitions.

skill prediction

The process of forecasting the skills required to handle future customer service interactions based on historical data and trends.

To set up skill prediction, see Setting up skill prediction in Workforce Optimization for Customer Service.

status trigger

Condition or event that causes a change in the status of a case. For example, a case might move from **Open** to **In Progress** when an agent starts working on it.

special handling notes

Important information about individual records and user's details. The notes can be assigned a status, priority, and expiration date. Special handling notes can be displayed on an embedded list or a related list on a record form or in a pop-up window that appears when a user accesses a form.

T

Glossary terms are grouped alphabetically.

test suite

Collection of tests that run in a specific order. Test designers typically create a test suite to test an application or a group of related features. They can schedule test suite executions and initiate any required client test runners.

V

Glossary terms are grouped alphabetically.

virtual agent

A conversational bot that provides user assistance through conversations with the customer or allow the customer to escalate the conversion to a live agent.

To learn more about the customer service virtual agent conversations, see Customer Service Virtual Agent conversations.

also known as

chat bot

variable set for Customer Service Management (CSM)

Pre-defined set of variables that can be added to catalog items to capture additional information, such as account and contact details.

W

Glossary terms are grouped alphabetically.

workspace

Unified interface that consolidates multiple tools and data views into a single screen, enabling customer service agents to efficiently manage cases, interactions, and tasks.

To learn more about the workspace, see CSM Configurable Workspace.

Also known as

CSM workspace

Agent workspace

Configurable workspace

work plan

Structured framework used to organize, track, and execute documentation or product development tasks across features, epics, and releases. It typically includes entries for each feature or enhancement, along with associated epics, progress status, multimedia requirements, plugin updates, and domain separation details.

Workforce Optimization for Customer Service

Manage and maintain the productivity of your workforce from a single application using Workforce Optimization for Customer Service. With this application, you can efficiently route work to your team, manage your team's skills and schedules, and monitor their performance.

Watch this short video to see how managers use Workforce Optimization for Customer Service.

https://player.vimeo.com/video/1115317175?h=43792d01cd&badge=0&autopause=0&player_id=0&app_id=58479

The application is available on configurable workspaces. Administrators can configure and customize the workspace using the application capabilities to complete the service objectives efficiently.

Workforce Optimization for Customer Service

Customer Service Management (CSM) enables you to do these tasks:

- Assess real-time operations and performance of teams and agents across different channels and queues.
- Keep track of ongoing work and provide real-time help to team members for better customer experience.
- Helps organizations ensure that their managers only see the data and views of relevant teams
- Monitor and measure team performance and provide feedback using assessments.
- Predict and recommend skills for agents.
- Identify opportunities to coach and train your teams.

Key Features

Managing work using channels and queues

Manage pending work items from customers, daily work routine of agents, and balance work load between agents adhering to promised SLAs. Automatically route and assign work items to agents based on availability, capacity, and skills. Monitor the health of your queues reviewing real-time performance and jump in to help with escalations.

Automating employee coaching and training

Assess your team's performance#and set coaching plans to improve their skills.

Integrated application data

Drive workforce optimization effectively by managing schedules, shifts, and queues for your teams. You can assess skills, automate agent recommendations based on those skills, and provide mentoring opportunities for employees.

Scheduling

Manage the scheduling for your organization from a central location. You can create shift plans, schedule plans, assign agents to shifts, and publish the schedules. Manage teams' approvals, swap agents' shifts, and forecast agent staffing scenarios.

Team performance

You can organize each of your teams into assignment groups. You can define a set of key Performance Indicators (KPIs) to analyze the performance of all groups within that team. From a central location, you can drill into the metrics for a group, an agent, or an incident within that team.

enhance their skills set. Track your teams performance, and manage the schedule of all agents in your assignment group—all from a unified location.

As an agent, you can manage your own schedule, access the schedule of your peers and request time off or shift swaps.

Manager workspace landing page

The landing page offers a real-time view of key performance metrics, team updates, and real-time alerts that improve collaboration. View metrics using various score cards, donuts, gauge, line charts, and bars having multiple data sets. For more information, see Manager Workspace landing page.

Channel management

Monitor your teams in real time and jump in their chat conversations to help when there's a need.

Using Channels, you can also:

- Review the real-time performance of your teams across various channels and queues.
- Review pending work items and manually allocate some of the work items to available agents.
- Monitor the actual work being performed by your team members.
- Monitor the status of the queues.
- Track and change the real-time presence and capacity utilization of your team members.

For more information, see Channel Management in Workforce Optimization for Customer Service.

Scheduling

Access your teams' calendar to see which agents are scheduled for coverage and which agents have taken time off.

Using Scheduling, you can also:

- Assign agents to shifts.
- Define break time.
- Preview and publish team schedule.
- Approve agent time-off or shift-swap requests.
- Create on-call shifts and assign primary, secondary rotation groups to handle escalation scenarios.

For more information, see Scheduling in Workforce Optimization for Customer Service.

Schedule Adherence

Access your teams' calendar to see which agents adhered to their planned schedules and make timely decisions to increase your team's performance by setting expected adherence targets.

Using Schedule Adherence, you can also:

- Configure and tweak the schedule adherence and conformance formulas and properties so that you can customize them for your organization.
- Access the schedule of all of your teams from one location and gain insights on whether your team is complying with published schedules.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Analyze the historical time attendance of your team members.
- View planned versus actual historical data for your team and individual agents.

For more information, see Schedule Adherence in Workforce Optimization for Customer Service.

Demand Forecasting

Forecast the demand for teams and predict resources based on historical data.

Using Demand Forecasting, you can also:

- View the agent staffing forecast at 15, 30, and 60-minute intervals on the team calendar.
- Adjust and prioritize schedules, tasks, breaks, and meetings for the agents without impacting service objectives.
- Use historical data and forecast the contact volumes (cases and interactions) at 15-minute intervals.

For more information, see Demand Forecast in Workforce Optimization for Customer Service.

Teams

Monitor performance trends for your teams using Key Performance Indicator (KPI) groups. Create a set of KPIs and apply them to all groups within a team and assess team performance from one location.

Using Teams, you can also:

- Identify all the teams that you manage as well as the ones you have visibility into.
- Analyze the KPIs that are crucial for your team.
- Drill into agents within each team and monitor their performance.
- Access each agent's profile to view details such as their manager, peers, and assignment groups.
- Drill down into each agent's skills or suggest them for coaching.

For more information, see Teams in Workforce Optimization for Customer Service.

Coaching and Skills Assessment

Enhance the quality of work done by your agents using Coaching. Assess agent skills and recommend the ones that they require to resolve issues. Identify coaching opportunities based on the recommendation and train the agents to acquire those skills.

Using Coaching, you can also:

- Automate the scoring, grading, and assessment of agent skills.
- Use coaching opportunities to create assessments.
- Track training assigned to agents based on their assessments.
- Analyze the skill gap and recommend training.
- Assign courses to agents from third-party learning management systems (LMS), such as Udemy, Pluralsight, and Cornerstone OnDemand.

For more information, see Coaching in Workforce Optimization for Customer Service.

Manager Workspace landing page

The Manager Workspace landing page provides managers with real-time alerts and key metrics that reflect the overall health and performance of the organization. By consolidating work and resource management data, managers can effectively oversee team performance, optimize agent utilization, and drive continuous improvement.

The Manager Workspace landing page showcases the various available widgets.

Manager Workspace landing page

The landing page provides the real-time data of the current workload and the team performance.

Alerts on the Manager Workspace landing page

Alert	Description
Help requested	View the help requests from agents and act on them. This feature improves visibility into ongoing challenges, facilitating quicker responses to team members and improving collaboration.
Overdue learnings	View the training tasks that remain incomplete past their deadlines. This feature helps you to identify training gaps and verify timely skill development.
Time off requests	List of submitted time-off requests pending for approval. This feature helps in managing employee leave, making it easier to plan and coordinate within your team.
Shift swap requests	Access the submitted shift swap requests to approve, reject, or add comments as needed. Once a request is approved or rejected, it’s removed from the list. This feature enables you to handle shift swap requests effectively.

Key metrics on the Manager Workspace landing page - Performance overview

Key metrics	Description
CSAT (Past 1hr)	Review customer satisfaction (CSAT) scores across various channels, including case, chat', voice and messaging. Additionally, you can filter CSAT by teams. This feature enables you to analyze customer feedback and improve service.
Interaction service level (Past 1hr)	Displays service level of customer interactions. This feature helps identify improvement areas and enhances overall service quality, resulting in increased customer satisfaction.
Average wait time (Past 1hr)	Monitor the average wait time for customer interactions across various channels, including voice, case, chat, and messaging. This feature helps you identify trends and make informed decisions to improve service efficiency.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key metrics on the Manager Workspace landing page - Work management

Key metrics	Description
Volume by channel	Analyze the volume of interactions segmented by different channels, such as case, chat, voice, and messaging. This feature provides insights into customer engagement trends, helping you assess the resource needs.
Today's work status	Monitor the status of ongoing cases and interactions. This feature enables you to effectively track the progress ongoing work items.
Open P1 cases	Access the active priority 1 (P1) cases that require your immediate attention, listed with the longest-open cases first. Select **View All** to see all critical cases. This feature enables you to identify and address urgent issues.

Key metrics on the Manager Workspace landing page - Resource management

Key metrics	Description
Agent presence status	Check the current availability of your agents, indicating whether they're active, away, or offline. This feature helps you to monitor workforce engagement and optimize resource allocation for effective customer support.
Average agent utilization	Track the current average utilization rate of agents to assess how effectively their time is spent on productive tasks. Additionally, you can also filter average utilization by teams. This feature helps you to balance your workload and optimize resource allocation.
Top skills in 24 hrs	View the most frequently utilized skills over the past 24 hours. This feature helps you identify high-demand skills and guide or plan training efforts.
Team's performance	View important metrics for individual team members, including agent adherence percentages and CSAT scores. This feature helps you evaluate each agent's contributions and confirms they meet scheduled commitments and customer expectations.

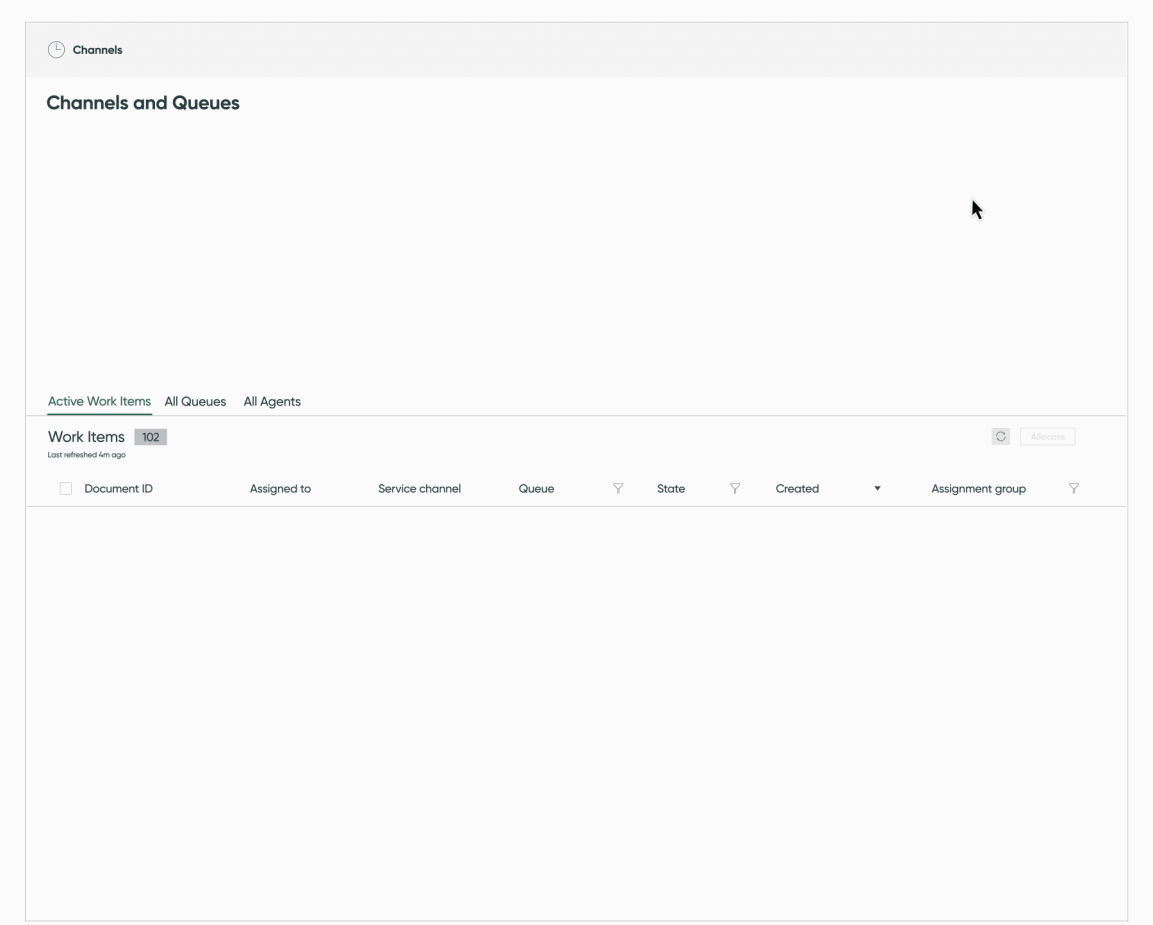
Channel Management in Workforce Optimization for Customer Service

Learn how you can use channel management capabilities to monitor important metrics across different channels and queues.

Monitor the real-time health of your channels and queues by reviewing waiting customers, available agents, the work being done by your team members (or agents in your teams) and collaborate with them to solve complex issues faster.

The following channel management snapshots provide you with a quick overview of the real-time performance monitoring and drill-down capabilities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



As a channel management user, you can:

- Track real-time performance of your teams using key performance indicator reports in service channels and queues.
- Review real-time performance as the team is actively working on tasks across channels and queues.
- Drill down on work items and jump in to provide timely help to team members via chat whisper or by adding work notes to a task.
- View agents' availability and their workload.
- Monitor pending work items in the queue and act when required.
- Assign work items manually to agents.
- Filter the applicable channels, KPIs, work items, queued work, and agents using the Assignment Group filter functionality.
- Track real-time performance of customer service on consumer messaging channels including WhatsApp, Facebook, LINE, Amazon Connect, and SMS.
- Track and change real-time presence of agents so that work items are routed more efficiently.
- Drill down the channel specific KPIs for further analysis.

As a channel management administrator, you can:

- Create service channels and queues.
- Associate assignment rules to queues.
- Configure KPIs for service channels and queues.

Setting up service channels and queues

Using Channel Management in Workforce Optimization for Customer Service

Example- Channel management using Workforce Optimization for Customer Service

Understand how you can monitor important metrics (or key process indicators) across different channels and queues. Manage the work being done by your team members (or agents in your teams) and collaborate with them to solve complex issues for your end-customers.

The example employee manages Customer Service operations for a large organization and has 12 teams. Each team has anywhere from 8 through 15 agents. The employee must ensure that incoming work gets effectively routed to the right groups across all channels. This can be done by setting up Advanced Work Assignment as per the business requirement.

Once the employee has configured Advanced Work Assignment (AWA) appropriately, they can add key performance indicators (KPIs) to the channels and queues, and monitor the operational performance of the teams in real time.

The employee in this example can then keep a track the teams' ongoing work, assign pending work items manually to agents, and join chat conversations to assist agents.

Get an overview on how you can monitor teams by looking at the real-time data in service channels and queues.

Monitor work in Channel Management

Allocate work items manually in Channel Management

Get an overview on how managers can add service channels, queues, and configure KPIs.

Monitor agents in Channel Management

Scheduling in Workforce Optimization for Customer Service

Learn how you can plan shifts that include break time for your agents to effectively manage their schedule in Workforce Optimization for Customer Service. Publish schedules to view the agent schedules on the team calendar.

Manage the scheduling for your organization from a central location. Scheduling makes managing team calendars transparent and collaborative between managers and agents. Use On-Call Scheduling with Workforce Optimization for Customer Service to have dedicated team members to resolve issues as they arise.

Managers can use demand forecasting feature to view their agent staffing forecast at 15-, 30-, and 60-minute intervals on the team calendar. Managers can monitor real-time schedule adherence of the agents using clock-in and clock-out events.

As a manager, you can:

- Create shifts to ensure customer coverage for the required span of time.
- Add breaks to the shifts that automatically stagger agent availability for those shifts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Preview the schedule and make necessary changes before publishing it to your agents.
- Access the schedule of all of your teams from one location.
- Modify the planned schedules when your team members inform you about their changed availability.
- Manage the schedules of team members working across different time zones.
- Monitor schedule adherence of your agents looking at the time worked summary and time attendance.
- Filter the members based on location, skills and assignment groups.
- Adjust the planned schedules and manage approvals through mobile application.
- Create on-call shifts and assign primary, secondary rotation groups to handle escalation scenarios.

As an agent, you can:

- Look up your schedule and request time off when required.
- Swap your shift with one of your peers.
- View your calendar and your team's calendar across the weeks to plan your work.
- Synchronize your team calendar and events with Microsoft Outlook.

Related topics

Setting up Scheduling in Workforce Optimization for Customer Service

Scheduling in Workforce Optimization for Customer Service

Example - Scheduling using Workforce Optimization for Customer Service

Understand how you can set up and publish agent schedules and how your agents can manage their own schedule based on an example.

A manager for a large Customer Service operation is responsible for 12 teams. Each team has from 8 through 15 agents. At any given point, the manager needs visibility into the teams' schedule. The manager must also be able to create shifts, and approve or reject shift-swap or time-off requests from the team.

The manager can manage the teams' schedule using **Scheduling**. Team members can also manage their own schedules effectively by requesting shift-swaps or time off.

The manager can review schedules by performing the following steps from one central location:

1. Create shift plan.
2. Create a schedule plan.
3. Assign agents to work shifts.
4. Publish the schedule.
5. Approve teams' requests.

Agents make requests to change the schedule or take time off. For more information, refer to Track and manage your team schedule.

Get an overview of how to you can create shift plans and assign agents to the shifts using the schedule plan. For more information, refer to Create Shift Plans on YouTube.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get an overview of how you can monitor shifts and schedule for your entire team from a single location. For more information, refer to Monitor Team Schedule on YouTube.

Get an overview of how agents use the workspace to manage their schedule. For more information, refer to Agent Schedule on YouTube.

For detailed information on creating and managing schedules using Workforce Optimization for Customer Service, refer to Scheduling in Workforce Optimization for Customer Service.

Schedule Adherence in Workforce Optimization for Customer Service

You can use schedule adherence to monitor whether your team members are adhering and conforming to the schedules and to improve the operational efficiency of your organization.

Clock-in and clock-out events are generated as agents change their availability status. The time between the clock-in and clock out events are aggregated to create schedule adherence and conformance reports.

Adherence measures how closely agents follow their schedule to complete their assigned work. Conformance measures the agents' total time at work compared to the total scheduled time period, regardless of adherence.

Schedule adherence helps your organization to do the following actions:

- Measure whether the effort spent on demand forecasting and scheduling team members is used in an optimal manner.
- Plan for more effective staffing needs in the future based on your insights into the historical use of agent resources.
- Discover coaching opportunities for your agents when there are gaps in their adherence. For more information, see Coaching in Workforce Optimization for Customer Service.

As a manager, you can do the following actions:

- Access the schedule of all of your teams from one location and gain insights on whether your team is complying with published schedules.
- Increase your team's performance by setting expected adherence targets.
- View the time attendance of your agents by looking at such details as clock-in and clock-out times.
- Analyze the historical time attendance of your team members.
- View planned versus actual historical data for your team and individual agents.
- Modify the clock-in and clock-out times of your agents.

As an administrator, you can set the threshold percentages and change the formulas for calculating schedule adherence and conformance.

Schedule Adherence for Customer Service in action

Watch this short video to understand how managers and agents use Schedule Adherence in Workforce Optimization for Customer Service

Schedule Adherence for Customer Service

Consider the following steps to determine the schedule adherence and conformance:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. The administrator sets the *Agent Time Work Event Trigger* business rule as active to record the clock-in and clock-out times of customer service agents.
2. An agent works for the Customer Service operations team and reports to a manager. Let's assume this scenario is a typical work day:
   a. The agent logs in to CSM Agent Workspace.
   b. The agent changes the presence status to **Available** and starts work. The clock-in event gets generated.
   c. The agent changes the presence status to **Break** and goes for lunch. The clock-out event gets generated.
   d. When the agent comes back from lunch and answers a phone call, the presence state becomes **Busy** and the clock-in event gets generated.
   e. The agent then logs out from CSM Agent Workspace or changes the presence status to **Offline**. The clock-out event gets generated.
   f. At the end-of-the-day, the agent's time worked summary is generated with key performance indicators (KPIs), such as Start Time, End Time, Planned Work, Time Not Worked, Available Non Planned Time, Time Worked, and Adherence%, Conformance %.
3. The agent's manager logs in to Manager Workspace to view the agent's time worked in the **Team Calendar**. The manager can also view the agent's actual time worked and working pattern for all historical days. If required, the manager can coach the agent to a desired performance that fits in with the team culture.

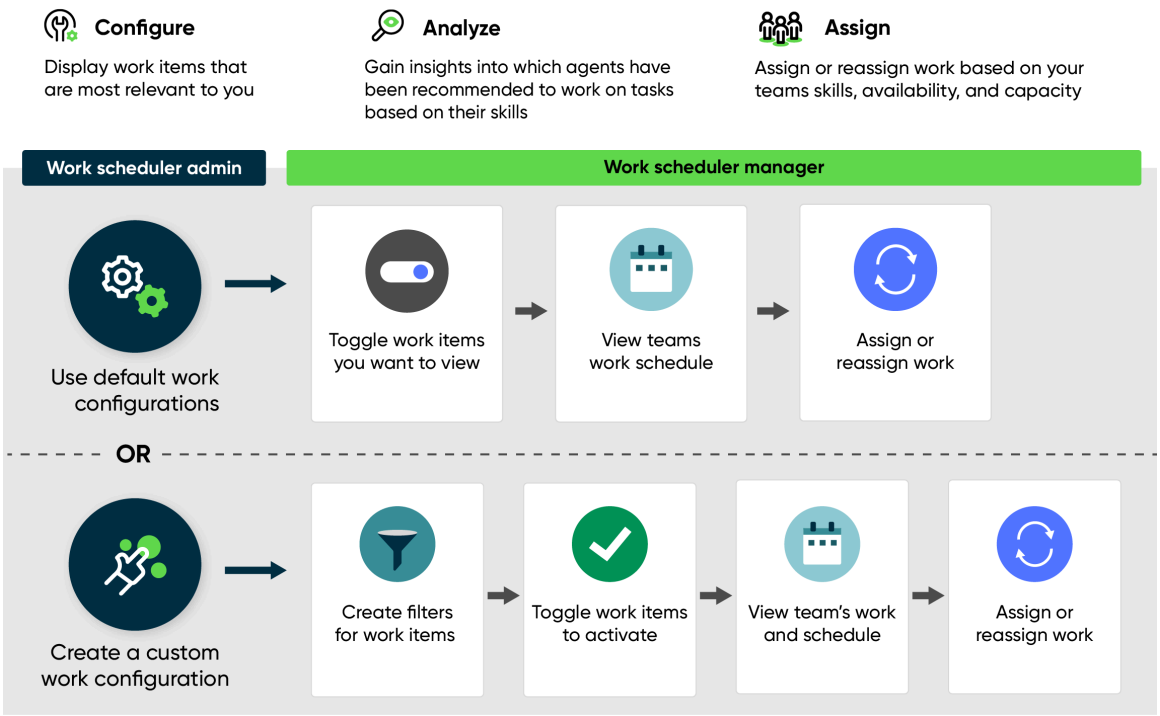
Work scheduler in Workforce Optimization for Customer Service

Manage the work of all your teams from a central location. You can get visibility into your entire teams' workload. From your team's calendar, you can assess the task complexity level and work capacity, and assign or reassign work.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following image provides a high-level overview of Work scheduler.



As an administrator, you can:

- Create work configurations that managers can view in their work queue. For information on setting up work configurations, see Set up a work configuration.
- Create work scheduler cards and configure them based on your needs. For more information, see Create a Work scheduler card using the Next Experience UI Builder.
- Associate the work scheduler cards with work configurations. For more information, see Associate a work scheduler card to the work configuration.

As a manager, you can:

- Create custom preset filters to prioritize your work items based on what's important for you.
  - You can define the filters based on task type. For example, you can set filters for incidents that are categorized as Priority 1 and Priority 2.
  - You can also define filters based on use cases. For example, if you want to prioritize catalog tasks from a VIP business unit over other units, you can define those conditions for the filter.
- Configure your work queue to display the most relevant work items.
- Assign or reassign work items based on your teams' shifts, and skill recommendation.
- Assign work items based on your teams' shifts.
- Add criteria for matching rules and then rank team members and assign work items based on those rules.

Demand Forecast in Workforce Optimization for Customer Service

Demand Forecast enables managers to view their agent staffing forecast at 15, 30, and 60-minute intervals on the team calendar. This feature enables managers to adjust and prioritize schedules, tasks, breaks, and meetings for their agents without impacting service objectives. Learn how you can use Demand Forecast to predict resources based on historical data.

Overview of the Demand Forecast application. Demand Forecast

The 15, 30, and 60-minute intervals are color-coded to display the status of agent staffing such as understaffing, overstaffing, and well staffed. Understaffed slots are color-coded red, overstaffed slots are color-coded yellow, and well-staffed slots are color-coded green. Slots that do not need staffing are color-coded grey. Managers must ensure adequate staffing in understaffed slots and optimize the resources in overstaffed slots.

For example, a manager of the Service Support group can see that the slot between 07:00 and 07:15 is color-coded red and is understaffed. The demand is for nine resources and the coverage is eight resources. The slot is understaffed by one resource. That slot displays **9** and **-1**. To avoid the understaffing of that slot, the manager allocates a resource who is on a break. The manager reschedules the break of that resource from 07:00 to 07:30. The 07:00 to 07:15 slot is now well staffed and color-coded green.

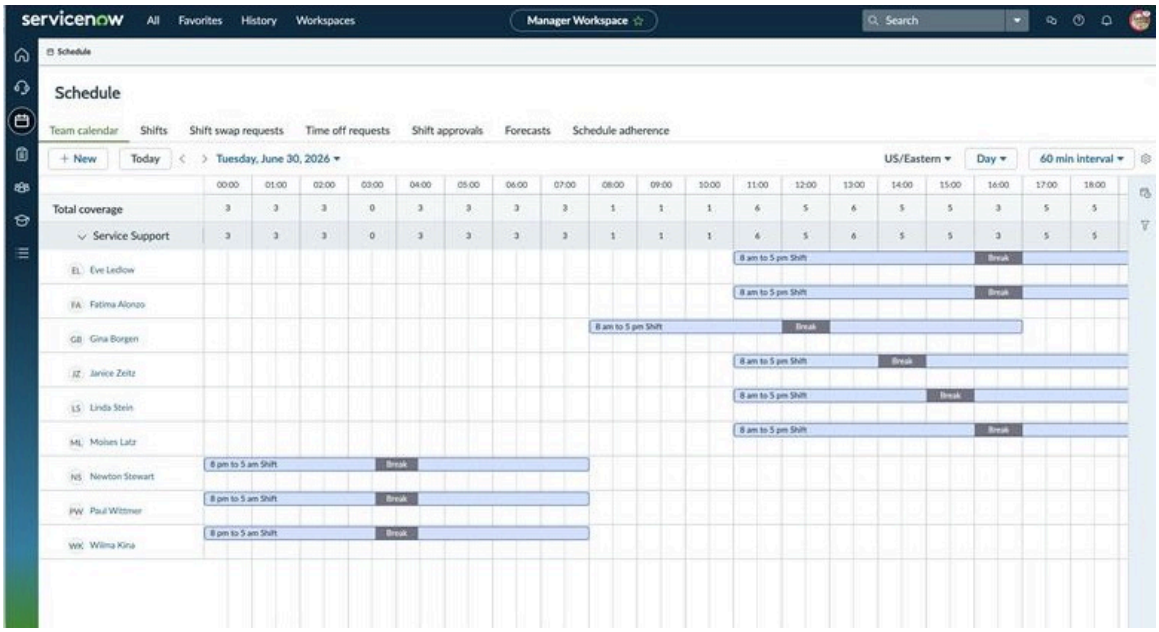
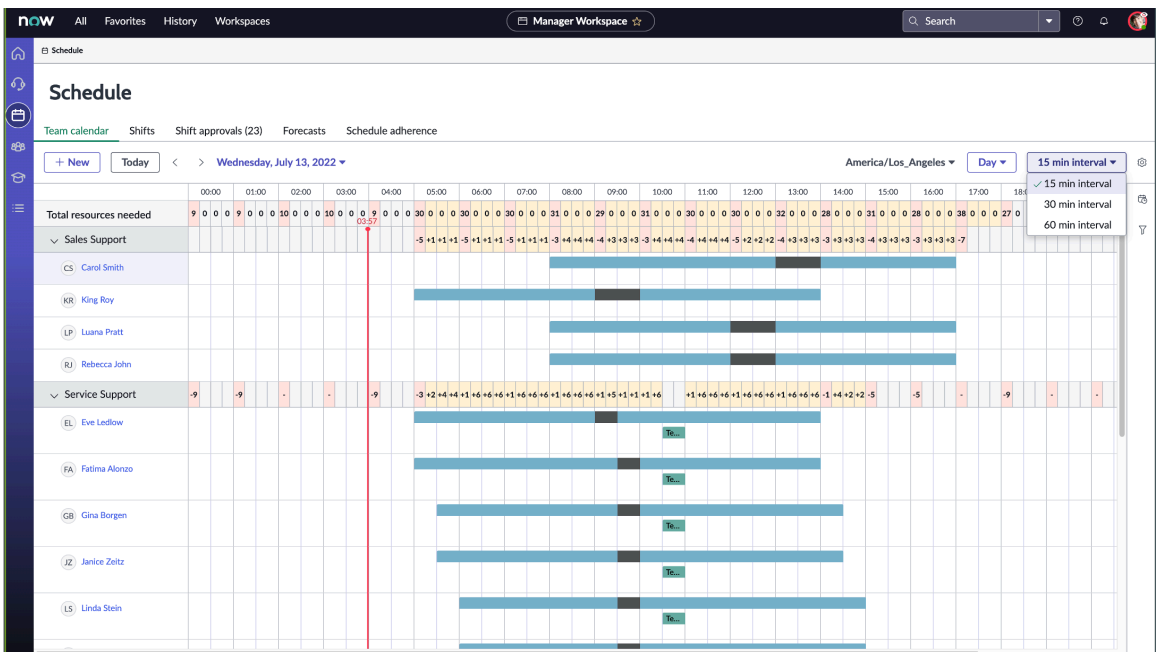
Demand Forecast view for a team



The manager of all the teams can view the staffing forecast of the teams and at the individual level in the 15, 30, and 60-minute intervals according to the requirement. This view helps managers to staff their teams adequately.

Demand Forecast view for all teams



The Demand Forecast application uses MetricBase to forecast the demand for teams.

When you create Demand Forecast configurations, the application creates these metrics:

- Staffing forecast: The forecast on the number of agents that a manager must handle cases and interactions in 15, 30, and 60-minute intervals.
- Volume forecast: The historical data and the forecast of the contact volumes (cases and interactions) at 15-minute intervals.

Note:
You can create forecast configurations for any table.

Analyzing Demand Forecast resource prediction

As a manager with the forecast admin role, you can create forecast parameters in the Manager Workspace. Modify forecast parameters to visualize forecast data and preview time-series data before publishing it. You can create any number of forecasts to preview the time-series data in real time.

You can also make manual adjustments to tweak the forecast and analyze the forecast pattern. Overlay the manual adjustments on the visualized forecast data and view the time-series data to analyze the forecast model. For example, you have a specific pattern for the upcoming week that has a national holiday in the middle of the week where you need more agents. Because you expect the sales to go up, you can manually tweak the forecast to increase it by 10% and analyze that data.

Demand Forecast

The Demand Forecast application includes the following modules:

Demand Forecast application modules

Module Name	Description
Data Collection Definitions	Set conditions to define the data that you want to collect for cases, interactions, or any table.
Formula Parameters	Add the parameters to be defined in the formula to calculate the resources from the forecast.
Resource Conversion Formula	Add formulas to convert forecast to resources at 15, 30, and 60-minute intervals.
Group Forecast Configuration	Associate the configured formula for resource conversion to groups.

As a user with the sn_agent_forecast.admin role, you can forecast the number of agents that you need for a shift.

To forecast the demand:

1. Collect data by defining data collection definitions.
2. Set values for forecast parameters and generate volume forecasts.
3. Create formulas to convert volume forecasts into the number of resources that you need at 15-, 30-, and 60-minute intervals.
4. Associate the formulas to assignment groups.
5. View the predicted demand on the calendar.

Note:
See the Demand Forecast section in Components installed with Workforce Optimization for Customer Service for information on the default components and configurations.

Collect data by defining data collection definitions

Use the Data Collection Definitions module to define the data that you want to collect for forecasting agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the *Collect daily data for automated forecast configurations* scheduled job to gather data for the metrics defined in the data collection definitions. The scheduled job fetches the records from the previous day for every 15-minute interval for all assignment groups and stores it in the MetricBase.

  You can access the time series for the collected data using the MetricBase `list` in the Group [sys_user_group] table. For more information on accessing MetricBase data, see Access MetricBase data using the list command.

- Use the *Collect historical data for automated forecast configurations* on-demand job to collect historical data at 15-minute intervals. This job collects data for the past three years.
- Use the *Forecast resources for future* scheduled job to forecast the resources based on the collected data and stores the data in the Agent Forecast metric in MetricBase. See Forecast properties to set the collection frequency such as the number of days that you must collect the data to calculate the forecast or the time period that you want to store the data for.

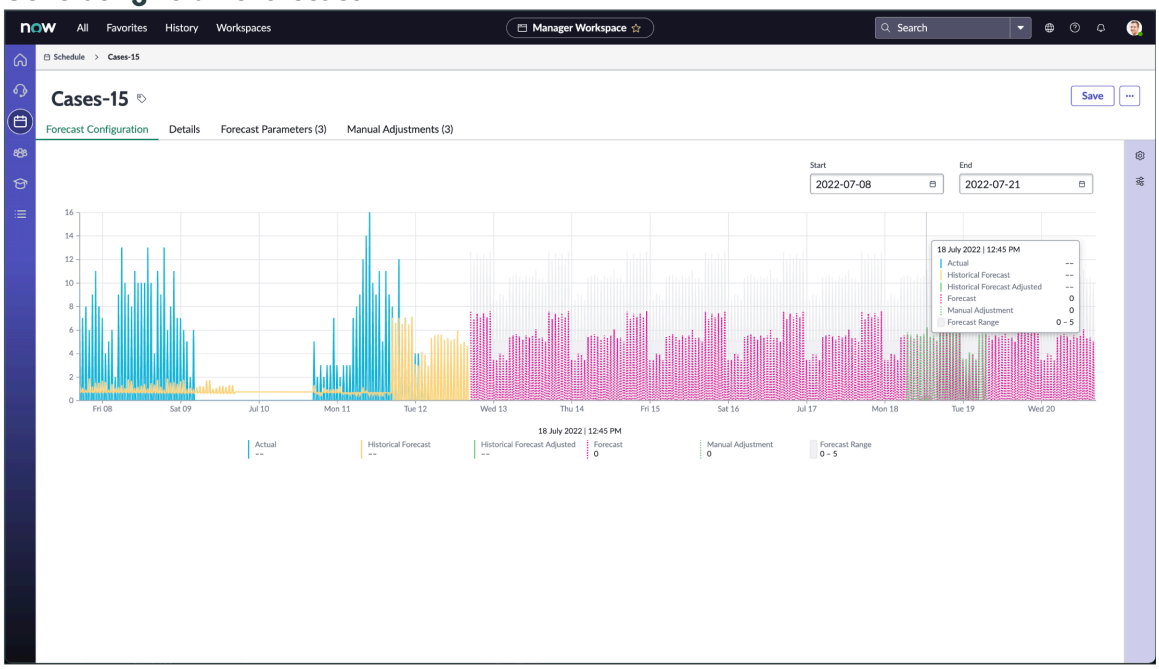
Note:
The time series metrics created for data collection definitions use the WFO Forecast retention policy. This policy stores data at a one-hour interval for the past three years.

Create forecast parameters

Managers can collect historical data at 15-minute granularity for generating accurate forecasts. The forecasts generated show the patterns in cases and interaction volume at 15-minute intervals. By default, the application uses the Seasonal Trend Loess (STL) algorithm.

For example, a manager can generate the volume forecast at 15-minutes intervals by providing the appropriate forecast parameters. Forecast parameters consist of the period length and periods to forecast that are most suitable for the pattern observed in the contact volumes.

Generating volume forecast



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create formula parameters

Use numeric values or a script to be defined in the formula to calculate the resources from forecasts. Units in formula parameters can be specified in hours, minutes, or absolute numbers. See Formula parameters for the parameters that are available by default.

Create formulas to convert forecast to resources

Build formulas to convert the volume forecast to the staffing forecast at 15-, 30-, and 60-minute intervals. See Resource Conversion Formula for the configured resource forecast formulas that are available by default.

Associate formulas to assignment groups

Associate assignment groups with the resource conversion formula to convert the number of cases and interactions to the number of agents.

View the predicted demand on the calendar

The data collected by the Agent Forecast metric in MetricBase is used to forecast the agents that you need for each 15-, 30-, and 60-minute interval in a day on the team calendar. In the Week and Month views for the calendar, it displays the staffing levels for a given week and month respectively.

Daily Data Collection for Demand Forecasting Definitions

As a WFO admin, you need to configure assignment groups associated with Workforce Optimization (WFO) by provisioning *sn_wfo_cfg_ws.manager* role to manager or additional manager of those groups. The historical or daily data collection can be collected only for WFO Assignment groups to support demand forecasting.

Note:
If you need to add new assignment groups after the historical or daily data collection job has already been run, update the corresponding data collection definition by setting the *is_historical_data_collected* flag to false and the duration to 0. After making these changes, rerun the historical data collection job to ensure that historical data is collected for the newly added groups, maintaining the accuracy and completeness of demand forecasts.

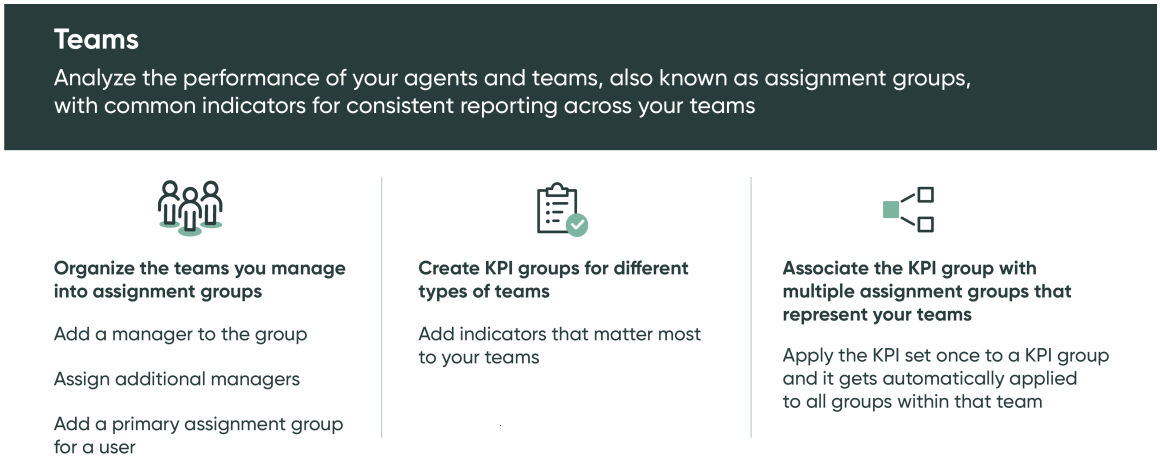
Teams in Workforce Optimization for Customer Service

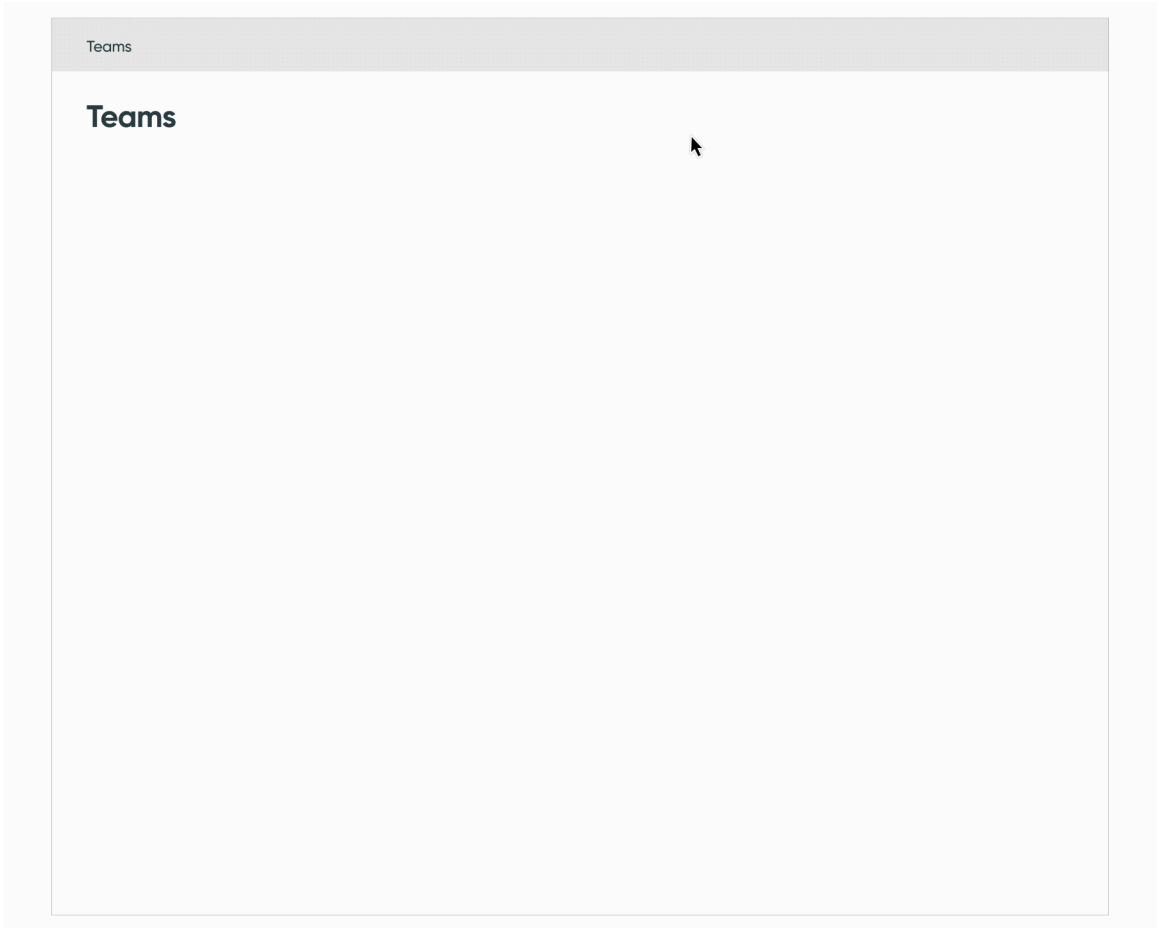
Learn how you can organize each of your teams into assignment groups. You can define a set of key Performance Indicators (KPIs) to analyze the performance of all groups within that team. Drill into the metrics for a group, an agent, or an incident within that team—all from a central location.

This video gives you an overview of how you set up your teams into assignment groups and add KPIs to measure performance. Organize your teams into assignment groups

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Drill down into your reports.



As an administrator for **Teams**, you can:

- Create a KPI group for a common set of indicators (KPIs) you use to measure your teams' performance.

  Note:
  Your teams are defined as **assignment groups** within the **Teams** application.

- Add the KPIs to the KPI group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add assignment groups to the KPI group.

> **Note:**
> Ensure that you have a manager added to each assignment group. The manager is the one that either directly manages the assignment group or one that needs visibility into the assignment group.

As a manager, you can:

- Analyze the performance trends for your teams.
- Drill down into the performance of teams, agents, or cases.

Setting up Teams Workforce Optimization for Customer Service

Teams in Workforce Optimization for Customer Service

Example - Teams using Workforce Optimization for Customer Service

Understand how you can manage your teams from a single location using an example.

Our example employee is the manager of Customer Service Desk and manages 15 teams. The manager is also an additional manager of most teams and has visibility into the operations, although the agents don't directly report to them.

To effectively analyze the performance of each team from one location, the manager sets up the **Teams** as follows:

1. Organizes the teams into groups called assignment groups. The teams either directly report to the manager or the manager may have visibility into their performance.
2. Creates a KPI group with a set of indicators that matter most to measure the performance of the assignment groups.
3. Adds all assignment groups that use the set of KPIs to the KPI group.

With this set up, the manager can effectively analyze the performance of their teams grouped by KPI groups.

Managers can set up and use Teams by performing the following steps:

1. Create a KPI group
2. Add KPIs to that group
3. Add managers to assignment groups
4. Add assignment groups to the KPI group
5. Drill down into a KPI, agent, or an incident to analyze performance

For detailed information on how to setup and use Teams, see teams.

Coaching in Workforce Optimization for Customer Service

Learn how you can review and assess the quality of completed interactions and tasks. Enhance your teams' skills set by assigning them training based on the assessments and add skills to their profile when they get trained.

Here's an example of how Workforce Optimization for Customer Service uses Predictive Intelligence to recommend skills for agents:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scenario for recommending skills using predictive intelligence

Step	Description	Example
1.	Predictive Intelligence associates the cases that were closed using similar skills and then groups the tasks by the agents who resolved them.	Predictive Intelligence looks at the similarity between the tasks that were resolved using the skill Firewall.
2.	When agents resolve cases, the Skill Recommendation application stores the skill and agent associations.	Agent A completes a task that requires the skill Firewall, but that skill is not in the agent's user profile yet.
3.	System administrators set the threshold for the skill and agent associations. When the threshold is reached, the Skill Recommendation application recommends to the agent's manager that the skill be added to an agent's profile.	The system administrator sets the threshold at 10. That means the agents have to complete at least 10 tasks that require a specific skill, before the predictive intelligence engine can recommend that specific skill for the agents. Agent A completes 10 tasks that required the skill Firewall, and currently Agent A is not assigned skill Firewall. The Skill Recommendation application recommends the skill Firewall for Agent A to the agent's manager.
4.	The manager approves and adds the skill to the agent's profile.	Agent A's manager approves the skill Firewall and adds that skill to Agent A's profile.
5.	Advanced work assignment (AWA) uses the new skills that were added to the agent's profile, looks up tasks that require those skills, and assigns the agents to complete those tasks.	When a task requires the skill Firewall, Agent A is automatically considered for that task assignment.
6.	Over time, the Predictive Intelligence machine learning algorithms learn which skills were assigned to the agents to resolve the cases.	

As a coach, you can:

- Use surveys to evaluate your team's performance.
- Recognize improvement opportunities and assign training tasks.
- Assess a trainee's ability to resolve cases.
- Assign training that is based on the assessments.
- Add skills to a trainee's profile that is based on a recommendation from Predictive Intelligence.

As a trainee, you can get trained to address your skill gaps.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example- Coaching using Workforce Optimization for Customer Service

Understand how you can assess your agents performance, identify skill gaps, and train them to enhance their skill sets with Coaching.

For example, Amy Jones manages Customer Service operations for a large organization and has 12 teams reporting to them. Each team has anywhere from 8 through 15 agents. She is also added as a manager to other teams to increase visibility.

Amy Jones wants a single location to:

- Monitor the skills each team uses to solve issues
- Analyze metrics and monitor pending coaching assessments and training for the teams
- Add skills used for resolving issues or when Predictive Intelligence Workbench recommends them.

Amy Jones can manage all of these actions by doing the following:

1. Set conditions that trigger coaching opportunities.
2. Assess agents' skills and assign training.
3. Add skills to agent profile when they complete training or using recommendations from Predictive Intelligence.

For detailed instructions to use Coaching in Workforce Optimization for Customer Service, see Coaching.

Configuring Workforce Optimization for Customer Service

Enable Workforce Optimization for Customer Service and configure settings to use the Channel Management, Scheduling, Teams, and Coaching applications.

Activate Workforce Optimization for Customer Service

Workforce Optimization for Customer Service solution is highly modular, offering a wide range of capabilities such as Channel Management, Scheduling, Coaching, and Teams applications in CSM Manager Workspace. The Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) plugin activates all other dependent plugins to enable users to the Channel Management, Scheduling, Coaching, and Teams applications in Workforce Optimization for Customer Service.

Before you begin

The Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) plugin is available with the CSM Enterprise subscription package. To get access to all new features available with the new configurable workspace, activate the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) plugin.

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When domain separation and delegated Admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with Workforce Optimization for Customer Service

Several types of components are installed with activation of the CSM Configurable Workspace (sn_csm_wfo_workspa) plugin, including user roles, key performance indicators (KPIs), scheduled jobs, properties, and tables.

Workforce optimization for customer service

Roles

Role title [name]	Description	Contains roles
Workforce Optimization User [sn_wfo.user]	Grants read access to primary group and additional managers.	pa_analyst
Workforce Optimization Admin [sn_wfo.admin]	Grants administrative rights to create, read, update, and delete (CRUD) additional managers.	sn_wfo.user
Workforce Optimization CSM Manager [sn_csm_wfo_workspa.manager]	Grants rights to create, read, or update, coaching, scheduling, teams, or channel management applications.	• sn_mgr_workspace.manager • sn_customerservice_manager • sn_wfo.user • sn_channel_mgmt.user • sn_shift_planning.admin • sn_coaching.coach • sn_sre.user • sn_team_perf.team_performance_user
Workforce Optimization CSM Admin [sn_csm_wfo_workspa.admin]	Grants administrative rights to create, read, update, and delete (CRUD) coaching, scheduling, teams, or channel management applications.	• sn_team_perf.team_performance_admin • sn_coaching.admin • skill_model_admin • sn_channel_mgmt.admin • sn_csm_wfo_workspa.manager • sn_mgr_workspace.admin • sn_sre.admin

Reports

Indicator Name	Description
Total Open Cases	Total number of open that cases are waiting to be worked on by agents. The total count is divided into **New**, **Open** and **Awaiting info** cases.
Waiting Work Items	Total count of cases and interaction that are in queue to be assigned to agents.
Help Requested	Number of interactions for which agents requested for help.
Total Agents	All the agents that you manage. The total count is divided into **Available**, **Break**, **Away** and **Offline** agents.
Time-off Requests	Requests made by agents to take time-off from work.
Shift Swap Requests	Requests made by agents to swap shifts with other agents.
Open Cases	Graphs depicting cases waiting to be worked on, featured by open case type and age.
Critical Open Cases	Number of critical open cases.

Performance analytics Indicators

Indicator Name	Description
No. of cases resolved on first contact	Number cases resolved the first time it was handled.
No. of cases not updated in last 30 days	Number of cases that are not updated since 30 days.
No. of resolved cases reopened	Number of cases reopened because issues were not addressed properly.
No. of escalated open cases	Number of cases that are not worked on and are escalated.

Scheduled jobs

Scheduled job	Description
[CSM Manager Workspace] Daily Data Collection	Runs the job daily and collects data for all teams indicators.
[CSM Manager Workspace] Historic Data Collection	Runs the job and collects historic data for all teams indicators.
[CSM Manager Workspace] Weekly Data Collection	Runs the job weekly and collects data for all indicators in Manager Workspace.

Reports for service channels and queues (continued)

Report Name	Description
Interaction Work Items Resolved Today	Number of interaction work items resolved on any given day.
Average Handling time for Interaction Work Items	Average time for handling interaction work items.
Agents Available to take Interaction Work Items	Number of available agents to take interaction work items.
Case Work Items Closed Today	Number of case work items closed on any given day.

Reports for agents

Report Name	Description
Active Chats	Number of ongoing chat conversations.
Chats Completed Today	Number of chats completed on any given day.
Chat Rejections Today	Number of chats rejected on any given day.
Active Cases	Number of ongoing cases.
Cases Resolved Today	Number of resolved cases on any given day.

Reports for Amazon connect (Phone)

Report Name	Description
Active Calls	Number of ongoing calls between customers and agents.
Agents Available	Number of agents online.
Abandoned Calls	Number of calls that the agents were not able to attend on any given day.
Handled Calls Today	Number of calls attended by the agents on any given day.
Average Wait Time	Average amount of time in minutes that the customers needed to wait before talking to an agent.
Contacts in ACW State	Number of customer calls in which the agent must take some action after the call is over.
Oldest Contact Age	Call during which the customer had to wait the longest before speaking to an agent.
Average Abundant Time (seconds)	Average time before the customer disconnects the call after waiting for the agent to respond.
Average Handling Time Today	The average duration, from beginning to end, that a contact is engaged with an agent. This

Reports for Amazon connect (Phone) (continued)

Report Name	Description
	metric includes talk time, hold time, and the time spent on After Contact Work (ACW).
Average Wait Time Today	The average duration (seconds) that a contact remains in the queue before being attended to by an agent.
Max Queued Time Today	The longest time a contact waits in the queue. This includes all contacts added to the queue, even those that didn't connect with an agent.
Average Hold Time Today	The average duration (seconds) that a contact spends on hold while waiting in the queue.
Average Interaction Time Today	The average time (seconds) that contacts are actively engaged and interacting with agents. This does not include the time spent waiting in the queue.
Average Wrap Up Duration Today	The average duration (seconds) that agents spend in the After Contact Work (ACW) state, within the specified time range.

Scheduled jobs

Scheduled job	Description
[Channel Management] Reset Temporary Capacity Override	Runs the job every two minutes check the invalid or expired overridden capacity and resets to the previous channel capacity.

Properties

Property	Description
sn_channel_mgmt.list_auto_refresh.enable	Select to disable auto-refresh of lists in Channel Management. • **Type**: True or False • **Default value**: True
sn_channel_mgmt.channels_card_auto_refresh.enable	Select to disable auto-refresh of lists in Channel Management. • **Type**: True or False • **Default value**: True
sn_channel_mgmt.list_auto_refresh.interval.seconds	Defines the auto-refresh interval for the channel management list. • **Type**: Integer • **Default value**: 30

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
sn_channel_mgmt.kpi_auto_refresh.interval.seconds	Sets the frequency for refreshing data on channel management indicators. • **Type**: Integer • **Default value**: 5
sn_channel_mgmt.channel_card_auto_refresh.interval.seconds	Defines the auto-refresh interval for the cards on channel management overview container. • **Type**: Integer • **Default value**: 120
sn_channel_mgmt.filter_config.enable	Displays **Assignment Group** interactive filter in channels. • **Type**: True or False • **Default value**: True
sn_channel_mgmt.awa_agent_temporary_override_duration_in_hours	Duration for the channel capacity that is overridden. • **Type**: Integer • **Default value**: 12 hours

Note:
Channel management properties are not visible by default in the [sys_properties] table. To use any of the channel management properties, you must add the required property to the System Property [sys_properties] table. For more information, refer to Add a system property.

Scheduling

Roles

Role title [name]	Description	Contains roles
Shift Planning User [sn_shift_planning.user]	Grants read access for scheduling including the ability to view schedules and shifts.	None
Shift Planning Agent [sn_shift_planning.agent]	Grants agents access to their calendar and request shift swap or time-off.	sn_shift_planning.user
Shift Planning Admin [sn_shift_planning.admin]	Grants administrative access to create, read, update, and delete (CRUD) schedules and work shifts.	• sn_shift_planning.approver • sn_shift_planning.user • sn_shift_planning.agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables

Table	Description
sn_shift_planning_time_worked_summary	Stores the time worked summary of an agent.
sn_shift_planning_agent_time_work	Stores the agent's time worked, such as clock-in and clock-out timings. If an agent logs in early or logs out late, then the shift start and shift end times are stored in place of clock-in and clock-out timings.
sn_shift_planning_agent_time_attendance	Stores the clock-in and clock-out timings of agents. Data is retrieved when an agent logs in, logs out or changes the presence state.

Properties

Property	Description
sn_shift_planning.number_of_days_to_cache	Number of days to cache agent schedules. • **Type:** Integer • **Default value:** 5
sn_shift_planning.enable_schedule_adherence	Calculates and displays schedule adherence information for your agents. • **Type:** Boolean • **Default value:** True
sn_shift_planning.early_clockin_threshold	Threshold settings indicate how many minutes early or late an agent can clock-in or clock-out to the scheduled time without being considered non-adherent. This is the acceptable duration of time flexibility for an agent to start work before the scheduled start time. • **Type:** Integer • **Default value:** 60 min
sn_shift_planning.adherence_threshold	Set the percentage for a threshold in adherence. The agents who do not qualify to be above the defined threshold value (70%) are considered non-adherent agents. • **Type:** Integer • **Default value:** 70%
sn_shift_planning.conformance_lower_threshold	Set the lower threshold percentage for flexibility in conformance. The agents who don't qualify for the defined lower and upper conformance threshold values (80-120) are considered non-conformance agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
	• **Type:** Integer • **Default value:** 80%
sn_shift_planning.conformance_upper_threshold	Sets the upper threshold percentage for flexibility in conformance. The agents who do not qualify for the defined lower and upper conformance threshold values (80-120) are considered non-conformance agents. • **Type:** Integer • **Default value:** 120%
sn_shift_planning.auto_clockout_threshold	Threshold time for the system to wait and generate automatic clock-out events when agents forgets to clock-out. For example, if an agent's planned work shift is 8 AM to 5 PM and fails to clock out at 5 PM, the system waits for 60 min as threshold time and generates an automatic clock-out event. • **Type:** Integer • **Default value:** 60 min
sn_shift_planning.display_shift_name	Set this property to true to display the shift name. If the value is false, event type will be displayed. • **Type:** Boolean • **Default value:** True **Note:** If you change the value of this property, the changes are effective after 24 hours. To view the changes immediately, run the *Shift Planning - Delete All Agent Schedules Cache* scheduled job.

Business rule

Business rule	Table	Description
Agent Time Work Event Trigger	Agent Presence [awa_agent_presence]	Sets the clock-in and clock-out events whenever there is a change in agent's presence state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled Jobs

Name	Description
Shift Planning - Delete All Agent Schedules Cache	Deletes cache from the sn_shift_planning_agent_availability table. • Runs automatically everyday at 2:30 am • Run this job on-demand when you import data.
Clock-out event generation (For scenarios where clock-out event does not get triggered)	Generates clock-out events every 4 hours if agents haven't clocked-out. **Note:** Consider an agent's work shift timings are from 8 AM to 5 PM and *sn_shift_planning.auto_clockout_threshold* property value is set to 60 minutes. The agent clocks-in and fails to clock out, the scheduled job waits until 6 PM(5 PM+60 minutes) and if there's no clock out until 6 PM, the system generates a clock-out event with agent's shift end time.
Populate Agent Time Worked Summary	Runs daily to calculate the time worked, adherence and conformance based on agent's planned and actual work shift timings of the previous day. The values are stored in [sn_shift_planning_time_worked_summary] table.
Update Wrapper End Time for Actual Work Events	Runs daily to make sure the actual work wrapper end-time is equal to last clock-out time.
[Schedule Adherence] Daily Data Collection	Runs the job daily and collects data for all teams indicators.
[Schedule Adherence] Historic Data Collection	Runs the job and collects historic data for all teams indicators.
[Schedule Adherence] Weekly Data Collection	Runs the job weekly and collects data for all indicators in Manager Workspace.

Setting the due date for time-off and shift-swap request approvals: Administrators can configure the due date logic for the Time Off Request and Shift Swap Request approval flows. The approval due date is set as the number of days before the request start date. The default is set to two days which means if the approval is not approved two days before the request start date, it will be auto-rejected. For information on configuring flows, refer to Build your first flow in Flow Designer.

Demand forecast

Forecast configurations

Name	Description
Cases Assigned	Collects data for cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forecast configurations (continued)

Name	Description
Chat Interactions Created	Collects data for chat interactions.

The **WFO Forecast** time series metric retention policy is available by default for all forecast configurations. By default, this retention policy stores data at a 15min interval for the past three years for all zBoot customers.

Resource conversion formula

Name	Formula to create this resource forecast configuration
Resources for Sales Support	`([FC:Chat Interactions Created] * [FP:Average Chat Work Time - Sales Support]`
Resources for Service Support	`([FC:Cases Assigned]*[FP:Average Case Work Time - Service Support]) + ([FC:Chat Interactions Created]*[FP:Average Chat Work Time -Service Support])`
Resources for Tech Support	`([FC:Cases Assigned]*[FP:Average Case Work Time - Tech support])+([FC:Chat Interactions Created]*[FP:Average Chat Work Time -Tech Support])`

Formula Parameters

Name	Description
Service Support: Average Case Work Time	Average time a service support agent worked on a case. Time is measured in hours. The default value is 0.5.
Service Support: Average Chat Work Time	Average chat duration a service support agent had for each interaction. Time is measured in hours. The default value is 0.25.
Tech Support: Average Case Work Time	Average time a tech support agent worked on a case. Time is measured in hours. The default value is 1.
Tech Support: Average Chat Work Time	Average chat duration a tech support agent had for each interaction. Time is measured in hours. The default value is 0.5.
Sales Support: Average Chat Work Time	Average chat duration a sales support agent had for each interaction. Time is measured in hours. The default value is 0.5.

If you create forecast parameters for a forecast configuration, the values set in the configuration are used instead of the default forecast parameters listed in the forecast properties section. For information on configuring forecast parameters, see Modify forecast parameters to visualize forecast data.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forecast Properties

Name	Description
sn_agent_forecast.forecast_interval	The smallest interval (in minutes) at which historical data is collected and forecasts are generated. Valid values are 15 and 60.
sn_agent_forecast.number_of_historical_days_in_timeseries_chart	The number of historical days that will be plotted in time series chart for 15-, 30-, and 60-minute intervals in Manager Workspace.
sn_agent_forecast.number_of_historical_days_in_daily_timeseries_chart	The number of historical days that will be plotted in time series chart for daily interval in Manager Workspace.

Roles for demand forecast

Role title [name]	Description	Contains roles
Forecast admin [sn_agent_forecast.admin]	Grants administrative rights to create, read, update, and delete (CRUD) forecast configuration tables.	• sn_agent_forecast.users • clotho_admin
Forecast user [sn_agent_forecast.user]	Grants read access to forecast configuration tables.	

Tables for demand forecast

Table	Description
Forecast Configuration [sn_agent_forecast_configuration]	Define data collection definition and resource conversion formula configurations.
Forecast Parameter [sn_agent_forecast_parameter]	Define forecast parameters required for the formula.
Forecast Configuration group [sn_agent_forecast_configuration_m2m_sys_user_group]	Associate resource conversion formula with assignment groups.

By default, forecast configurations are available for the following groups:

- Sales Support
- Service Support
- Tech Support

Schedule jobs for demand forecast

Name	Description
Collect daily data for demand forecast data collection definitions	Runs daily at 2 am. For any table defined in the Data Collection Definition configuration, it counts the number of records from the previous day at 15-minute interval

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule jobs for demand forecast (continued)

Name	Description
	for every group and stores it in the MetricBase. Data collected at 15-minute interval is also aggregated at daily interval and stored in the MetricBase.
Forecast resources for future	Runs daily at 3 am. Calculates the forecast resources for the future based on the collected data and stores the data in the Agent Forecast metric in MetricBase.
Create cases and chats for previous day	Daily job that creates demo cases and chats for previous day.
Delete case demo data	Deletes cases older than 90 days. Not enabled by default.
Delete interaction demo data	Deletes chats older than 90 days. Not enabled by default.

On demand jobs for demand forecast

Collect historical data for demand forecast data collection definitions	Runs on demand. Collects historical data daily for 15-minute interval and aggregates the data at daily interval for 1098 days (past three years) and stores it in the MetricBase. Once the job is executed, the **Daily Historical data duration** column displays the number of days for which historical data has been collected for daily interval. The **Duration** column displays the number of days for which historical data has been collected for 15-minute interval. Both the columns are associated with the Forecast Configuration [sn_agent_forecast_configuration] table.
Generate forecasting demo data	Runs on demand. Collects data for data collection definitions for past 90 days. Runs Forecast resources for future jobs to generate volume forecasts and staffing plan for next 30 days. Activates Create cases and chats for previous day job to create cases and chats.

Teams

Roles

Role title [name]	Description	Contains roles
Teams User [sn_team_perf.team_performance_user]	Grants access to read KPI tables.	• sn_wfo.user • pa_analyst

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Role title [name]	Description	Contains roles
Teams Admin [sn_team_perf.team_performance_admin]	Grants access to create and configure KPIs, KPI groups, and assignment groups in the Teams module.	• sn_wfo.admin • sn_team_perf.team_performance_user

Properties

Property	Description
sn_team_perf.kpi_group.max_parent_kpis	The maximum number of parent indicators that you can add to one KPI group. • **Type:**Integer • **Default value:**5
sn_team_perf.kpi_group.max_supporting_kpis	The maximum number of supporting KPIs you can define for a parent KPI. • **Type:**Integer • **Default value:**10
sn_team_perf.ws.max_assignment_groups	The maximum number of assignment groups prioritized by order number to display on the Teams application in Manager Workspace. • **Type:**Integer • **Default value:**15
sn_team_perf.default_date_range	The default date range set in the date range picker. • **Type:**Integer • **Default value:**30

Performance analytics indicators

Indicator Name	Description
# of cases resolved on first contact	Number of cases resolved on first contact.
# of P1 cases resolved on first contact	Number of P1 cases resolved on first contact.
# of P2 cases resolved on first contact	Number of P2 cases resolved on first contact.
# of P3 cases resolved on first contact	Number of P3 cases resolved on first contact.
# of P4 cases resolved on first contact	Number of P4 cases resolved on first contact.
MTTR for Cases	Mean time to resolve the cases.
MTTR for P1 Cases	Mean time to resolve the P1 cases.
MTTR for P2 Cases	Mean time to resolve P2 cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Performance analytics indicators (continued)

Indicator Name	Description
MTTR for P3 Cases	Mean time to resolve the P3 cases.
MTTR for P4 Cases	Mean time to resolve P4 cases.
CSAT for Cases	Customer satisfaction score for cases.
CSAT for P1 Cases	Customer satisfaction score for P1 cases.
CSAT for P2 Cases	Customer satisfaction score for P2 cases.
CSAT for P3 Cases	Customer satisfaction score for P3 cases.
CSAT for P4 Cases	Customer satisfaction score for P4 cases.
Number of Closed Cases	Number of closed cases.
Number of Closed P1 Cases	Number of closed P1 cases.
Number of Closed P2 Cases	Number of closed P2 cases.
Number of Closed P3 Cases	Number of closed P3 cases.
Number of Closed P4 Cases	Number of closed P4 cases;
Average Wait Time for Chats	Average waiting time for chats.
Number of Chats Handled	Number of chats handled.
Average Handling Time for Chats	Average handling time for chats.
Number of Abandoned Chats	Number of abandoned chats.
Number of Incoming Cases	Number of incoming cases.
Schedule Adherence	Agents schedule adherence percentage.
Schedule Conformance	Agents schedule adherence percentage.
Summed duration of Time Worked	Agents total duration of time worked.
Summed Duration of Planned Time	Agents total duration of planned time.
Summed duration of Time Not Worked	Agents total duration of time not worked.
Summed duration of Available Non Planned Time	Agents total duration of available non planned time.

Coaching

Roles

Role title [name]	Description	Contains roles
Coaching Admin [sn_coaching.admin]	Grants administrative rights to create, read, update, and delete (CRUD) coaching opportunities, assessments, training, and skills.	• sn_coaching.coach • sn_lc.learning_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Role title [name]	Description	Contains roles
Coaching Coach [sn_coaching.coach]	Grants administrative rights to create, read, or update coaching opportunities, assessments, training, and skills.	• sn_coaching.trainee • pa_viewer • sn_lc.catalog_manager
Coaching Trainee [sn_coaching.trainee]	Grants access to add training, assessments, and skill records.	• skill_user • pa_viewer • survey_reader

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Business rule

Business rule	Table	Description
Calculate coaching survey score	Assessment Instance [asmt_assessement_instance]	Sets the feedback rating based on the survey score.

Coaching opportunities

Coaching Opportunity Name	Description	Table
Coaching Opportunity for SLA Breach	Coaching opportunity for the agents who worked on the critical and high priority cases that breached SLA.	Task SLA [task_sla]
Coaching Opportunity for low CSAT	Coaching Opportunity for the agents who worked on cases that has a customer satisfaction score less than 4.	Case Report [sn_customerservice_case_report]
Coaching Opportunity for skills award verification	Coaching Opportunity for verification of skills awarded to agents.	Case [sn_customerservice_case]
Knowledge Management Process: Coaching on quality of knowledge articles	Coaching Opportunity for the agents who need to improve the quality of a knowledge article by reviewing the assessment.	Case [sn_customerservice_case]
Coaching Opportunity for high TTR	Coaching Opportunity for the agents who worked on a case that had time to resolution more than 3 days.	Case Report [sn_customerservice_case_report]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Coaching opportunities (continued)

Coaching Opportunity Name	Description	Table
Interaction: Coaching Opportunity for Handling Time	Coaching Opportunity for the agents who worked had handle time more than 10 mins on an interaction.	Interaction [interaction]

Note:
You can customize the coaching opportunities for low CSAT, high TTR, SLA breach, and handling time based on your business needs.

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Coaching surveys

Name	Description
Chat Quality Survey	Survey associated with the Chat Interaction coaching opportunity. The coach assess the agent using this survey after the agent completes a chat interaction.
Case Quality Survey	Survey associated with the Case Interaction coaching opportunity. The coach assess the agent using this survey after the agent completes a case interaction.

Properties

Property	Description
sn_coaching.learning_default_duration	Number of days to read the knowledge article or complete training. The admin (sn_wfo.admin) sets the number of days for the trainee to complete reading the article or complete the training. The number of days is converted to the due date for the trainee to complete the training. It is calculated from the current date taking the trainee's time zone into consideration. • **Type:**Integer • **Default value:**5
sn_coaching.exclude_weekends_on_training_due_date	Excludes weekends when the due date is set for trainees to complete training. • **Type:**true | false • **Default value:**true

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Coaching with learning

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Roles

Role title [name]	Description	Contains Roles
Learning admin [sn_lc.learning_admin]	Grants administrative rights to create, read, update, and delete (CRUD) catalog, learning content, roles, and configure learning source.	• sn_lc.catalog_manager • sn_hr.integr_fw.admin
Learning catalog manager [sn_lc.catalog_manager]	Grants administrative rights to create, read, or update learning catalogs.	• sn_lc.task_creator • sn_lc.content_writer
Learning catalog group manager [sn_lc.catalog_group_manager]	Grants administrative rights to create, read, or update learning catalogs based on groups.	• sn_lc.task_creator • sn_lc.content_writer
Learning content creator [sn_lc.content_creator]	Grants administrative rights to create, read, or update internal courses.	sn_lc.content_reader
Learning content writer [sn_lc.content_writer]	Grants read or write access for learning courses.	sn_lc.content_creator
Learning content reader [sn_lc.content_reader]	Grants read access for learning courses.	
Learning content advisor [sn_lc.learning_advisor]	Can assign learning tasks.	
Learning task creator [sn_lc.task_creator]	Grants read or write access for learning tasks.	

Tables

Table	Description
Learning External Content [sn_lc_external_content]	Stores details of external course items that are pulled from third-party systems.
Learning User Course Activity [sn_lc_user_course_activity]	Stores details of learning course activities such as user to whom the course is assigned, status, due date, and name of the learning course.
Learning Content [sn_lc_content]	Stores details of internal learning content such as knowledge articles, videos that are created in ServiceNow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables (continued)

Table	Description
Learning Course Item [sn_lc_course_item]	Stores details of learning course items, such as the source to which the learning course belongs.
Learning Catalog [sn_lc_catalog]	Stores details of learning catalog items with its course items.
Learning Task [sn_lc_learning_task]	Stores details of learning tasks, such as user to whom the learning task assigned, and due date by when the learning task must be completed.
Learning System Configuration [sn_lc_learning_system_configuration]	Stores configuration parameters of sources (third-party learning management systems).

Properties

Property	Description
glide.ui.sn_coaching_assessment_fields	Edit coaching assessment activities. • **Type:** string • **Default value:** assigned_to,cmdb_ci,state,impact,priority,opened_by,work_notes,comments,*Attachme
sn_coaching.recommended_learning_dependent	Coaching Recommended Trainings is being deprecated and replaced with the Learning Tasks and course items from Coaching with Learning. • **Type:** string • **Default value:** true
sn_coach.lrn.exclude_weekends_in_learning_task_due_date	Enable to exclude weekends while setting the due date for learning tasks. • **Type:** true|false • **Default value:** true
sn_coach_lrn.learning_list_array_properties	List array properties for the now-list-menu component on the Learning Tasks tab, coaching module. • **Type:** string • **Default value:** script for data array
com.glide.transform.json.max-partial-length	Transforms JSON objects to internal objects and sets the word limit for records fetched through an API call. • **Type:** integer • **Default value:** 16384

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
	Note: You must Add this system property to set the desired value. When you synchronize third-party learning content with your ServiceNow instance, if the word count of the content being pulled into your instance exceeds the value set for this property, the synchronization fails.
com.snc.process_flow.specify.serialized_val_size_limit	Specify the limit of serialized value size allowed for runtime values in each step in the flow execution details. To prevent truncation, set the value to an integer equal to or less than zero. • **Type:** integer • **Default value:** 16384 **Note:** When you synchronize third-party learning content with your ServiceNow instance, if the word count of the content being pulled into your instance exceeds the value set for this property, the synchronization fails.

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Skill recommendation

Roles

Role title [name]	Description	Contains roles
Skill Recommendation User [sn_sre.user]	Grants rights to view skill recommendation tables.	wfo.user
Skill Recommendation Admin [sn_sre.admin]	Grants administrative rights to edit the properties for skill recommendation.	• wfo.admin • sn_sre.user

Navigate to **Skill Recommendation** > **Configuration** to configure these properties.

Properties

Property	Description
Enable skill recommendation. sn_sre.enable_skill_recommendation	Enable this property to start recommending skills for agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
	• **Type:**true | false • **Default value:**true
Maximum number of skills to predict based on supervised learning. sn_sre.max_supervised_skills	Using supervised learning, the maximum number of skills to predict for each incident ordered by confidence of prediction. • **Type:**Integer • **Default value:**3
Maximum number of skills to predict based on supervised learning. sn_sre.max_unsupervised_skills	Using unsupervised learning, the maximum number of skills to predict for each incident ordered by confidence of prediction. • **Type:**Integer • **Default value:**3
Number of times Predictive Intelligence must predict the same skill for an agent before recommending it for the agent. sn_sre.user_predicted_skill_threshold	The number of times Predictive Intelligence must predict the same skill for an agent before recommending the skill for the agent. • **Type:**Integer • **Default value:**20
Similarity solution definition to recommend skills from similar cases. sn_customerservice.unsupervised_solution_definition_for_cases	Name of the Predictive Intelligence solution definition used for predicting skills to resolve cases using unsupervised learning. If you have created your own solution definition, you can replace the default one with the one you have created. • **Type:**String • **Default value:**ml_sn_sn_customerservice_global_recommend_similar_
Similarity solution definition to recommend skills for cases. sn_customerservice.supervised_solution_definition_for_cases	Name of the Predictive Intelligence solution definition used for predicting skills to resolve cases using supervised learning. If you have created your own solution definition, you can replace the default one with the one you have created. • **Type:**String • **Default value:**ml_sn_sn_customerservice_global_recommend_skills_fr

Scheduled job

Scheduled job	Description
Start skill prediction	Runs the job every day at 1 AM on all incidents that were closed the previous day. Recommends the skills used to close the incidents to resolve similar open incidents.

Tables

Table	Description
User Predicted Skill [sn_sre_user_predicted_skill]	• Stores how many times a skill has been predicted for the user. • Skills not recommended in the last 60 days are automatically deleted from this table.
Task Predicted Skill [sn_sre_task_predicted_skill]	• Stores the skills predicted to resolve each type of incident. • Records created over 60 days ago are automatically deleted from this table.

Decouple Channel Management dependencies from WFO

Decouple Channel Management from core Workforce Optimization (WFO) modules to support modular deployment, enabling independent updates or scaling of Channel Management without impacting other workforce engagement.

Overview of decoupling channel management

Channel Management is a crucial tool that allows users to monitor ongoing work and track agents' performance. Decoupling Channel Management from the core Workforce Optimization (WFO) modules supports modular deployment, enabling independent updates or scaling of Channel Management without impacting other workforce engagement.

Note:
Channel Management when installed as a standalone module along with the agent workspace, the other modules are disabled.

Key Benefits:

- Independent Deployment: Channel Management can now be deployed independently, allowing for greater flexibility and control.
- Reduced Inter-Module Dependencies: The decoupling reduces dependencies between modules, enhancing system stability.
- Enhanced Scalability and Maintainability: The new architecture improves scalability and maintainability, making it easier to manage and expand.
- Streamlined Future Upgrades: Future upgrades for individual modules can be streamlined, ensuring smoother and more efficient updates.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles and Responsibilities

Roles and Responsibilities

Role Name	Description
sn_channel_mgmt.admin (for group manager)	The System Administrator creates a customer care assignment group and manage channel configurations and assignments.
sn_channel_mgmt.user (for the additional manager)	The Manager can log into Agent Workspace and access the channel management module through role-based visibility, such as the sn_channel_mgmt.user role. The Manager can utilize Channel Management in Agent Workspace independently of the full WFO suite. For more details see Configuring groups in Workforce Optimization for ITSM

Channel Management (New Menu in Agent Workspace)

Role: canvas_user and sn_channel_mgmt.user.

Agent Workspace is updated with a new menu icon ChannelManagement. Admin or user can see and access channel icon on the left pane for channel management in the Agent Workspace. On selecting the new channel menu icon, you can view the service channels. Admins can allocate the work items under Queued Work table, to respective group members.

Channel Management Capabilities for Supervisor Persona

Role: sn_csm.manager.

Enabling the channel management capabilities for the supervisor persona in Agent Workspace allows access to channel management without the need for the full WFO suite. The Manager can log into Agent Workspace and access the channel management module through role-based visibility, such as the sn_channel_mgmt.user role. This ensures that the Manager can use Channel Management in Agent Workspace independently of the full WFO suite.

Demo Data for Channel Management in Agent Workspace

Role: sn_channel_mgmt.admin.

Setting up demo data in Agent Workspace to showcase Channel Management features. The personas involved are an Agent and a Supervisor. The Supervisor creates a customer care assignment group and manage channel configurations and assignments. This group is associated with the customer care chats queue to manage inbound communication effectively. The demo data is provided within Agent Workspace, allowing users to view and interact with it to explore Channel Management functionalities. The validation process includes checking the addition of the new customer care group, populating group members, assigning roles, and ensuring all sections function properly.

For more information on channel management for customer service in workforce optimization, see: Channel Management in Workforce Optimization for Customer Service

Work Scheduler components in Workforce Optimization for Customer Service reference

Workforce Optimization for ITSM has properties to configure the Work scheduler default behavior.

Properties

Enter *sys_properties.list* in the Workspace filter navigator and search for the work scheduler properties listed below.

Properties

Property	Description
sn_wfo_work_sched.csm_allowed_tables	Defines the list of tables that a Work scheduler admin (sn_wfo_work_sched.admin) can use to create configurations for work assignments in the Workforce Optimization for Customer Service manager workspace. • **Type**: string • **Default value**: sn_customerservice_case
sn_wfo_work_sched.shift_data_categories	Comma separated sys ids for event categories that display in the Work scheduler calendar in the manager workspace. **Type**: string
sn_wfo_work_sched.should_fetch_shift_data	Enables the display of shift spans in Work scheduler in Workforce Optimization for Customer Service manager workspace. • **Type**: true|false • **Default value**: true
sn_wfo_work_sched.recommend_criteria_limit	Defines how many matching criteria can be created for each matching rule in Work scheduler when suggestions are enabled. • **Type**: integer • **Default value**: 10
sn_wfo_work_sched.match_criteria_threshold	Defines which users are shown in Work scheduler when suggestions are enabled and the matching criteria percentage is greater than the value indicated. • **Type**: integer • **Default value**: 0

Domain separation in Workforce Optimization for Customer Service

Domain separation is supported in Workforce Optimization for Customer Service. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data. Domain separation in Workforce Optimization for Customer Service is configured to apply to all features of the application. Separation of data is configured along with separation of logic and process.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

How domain separation works in Workforce Optimization for Customer Service

Domain separation in Workforce Optimization for Customer Service does not require any setup or configuration.

Domain separation for Channel Management in Workforce Optimization for Customer Service

The work items, such as cases, interactions, and their associated actions, appear based on the selected domain. For information on how work assignments are routed based on domain in Channel Management, refer to Domain separation and Advanced Work Assignment

The domain-separated tables for Channel Management are as follows:

- Service Channel Reports [m2m_awa_service_channel_report]
- Queue Reports [m2m_awa_queue_report]

Domain separation for Scheduling in Workforce Optimization for Customer Service

When an agent schedule is generated and assigned to an agent, the schedule is only available in the domain that agent belongs to.

The domain-separated tables for Scheduling are as follows:

- sn_shift_planning_agent_schedule
- sn_shift_planning_agent_schedule_request
- sn_shift_planning_break
- sn_shift_planning_day
- sn_shift_planning_event

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- sn_shift_planning_schedule_plan
- sn_shift_planning_schedule_shift
- sn_shift_planning_schedule_shift_agent
- sn_shift_planning_shift_plan
- sn_shift_planning_shift_swap_request

Domain separation for Teams in Workforce Optimization for Customer Service

The *sn_wfo_add_manager* table is domain separated. When users are added as additional managers, those users can only view users within that domain.

Domain separation for Skill Recommendation in Workforce Optimization for Customer Service

Domain separated tables for Skill Recommendation

- sn_sre_task_predicted_skill
- sn_sre_user_predicted_skill

Domain separation for Coaching in Workforce Optimization for Customer Service

For information on how domain separation works in Coaching for Workforce Optimization for ITSM, refer to Domain separation and Coaching.

Create Manager Workspace Landing Page

Create a landing page based on your business requirement.

Before you begin

Create reports and key performance indicators that are required to set up the landing page.

Role required: sn_mgr_workspace.admin

About this task

The landing page displays a set of reports that are the initial view of your workspace. You can enhance the Workforce Optimization experience by customizing the landing page to monitor metrics and trends that matter most to you. Use the User Interface (UI) Builder to add data visualization components to display widgets and reports that you want to track and monitor.

Using UI Builder, you can:

- Clone the existing CSM landing page.

  Note:
  The application scope can be set to CSM Workspace, CSM Manager Workspace or Workforce Optimization. The **Clone Page** action is not available in the Global scope.

- Add or edit containers in the page.
- Add or edit visualizations for each container.
- Edit the layout of a page or container.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workspace Experience** > **Administration** > **Landing Pages**.
2. Click the **CSM Landing Page**.
3. Click **Clone Page**.

   Note:
   The **Clone Page** action is available when the application scope is CSM workspace.

4. Fill out the form.

   The settings in the **Layout** and **Available Child Slots** fields determine how the content renders on the page.

   Landing page attributes and layout

Field	Description
Name	The name of your landing page.
Component	The component defaults to sn-page and is read-only.
Order	The order for the landing page. If you have multiple landing pages, the order determines the landing page precedence. Pages with a lower-order value take precedence over pages with a higher-order value.
Active	Determines whether the landing page is active. Enable for a landing page to be displayed.
Optional Page Title	A title to display on the page.
Available Child Slots	A predefined style of child slots.
Layout	The layout of the columns on the page.

5. Click **Update** to save your landing page.
6. **Optional:** Configure permissions for users to access the landing page.
   a. Click the **UX Page Element Permissions** related list.
   b. Click **New**.
   c. Select the role or group for the landing page to be visible.
   d. Click **Submit** to save your permissions.
   Any page element (including sub elements) can have a restriction to a given set of roles or groups. If there are no element permissions set on roles or groups, then all users see the element. If there are some element permissions set, then a user needs just one role or group assignment to see the element.
7. Configure a container:
   a. Click the **UX Page Elements** related list.
   b. Click **New Container** or select an existing container.
   c. Fill out the form.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Container attributes and layout

Field	Description
Name	The name of your container.
Component	The component defaults to sn-page-container and is read-only.
Parent element	The landing page your container resides.
Slot	The component placement within the parent element's slot configuration.
Order	The order the page shows.
Border	Enable if you want a border around your container.
Optional Container Title	A title to display on the container.
Type	Select a type of styling for your visualization.
Available Child Slots	A predefined style of child slots.
Layout	The layout of the columns on the page.

8. Configure a widget:
   a. Click **New Visualization** or select an existing widget.
   b. Fill out the form.

Widget attributes and layout

Field	Description
Name	The name of your widget.
Component	The component defaults to sn-page-widget-visualization and is read-only.
Parent element	The container that your widget resides in.
Slot	The component placement within the parent element's slot configuration.
Order	The order the component shows.
Report	Select the report you want to render: ○ Single score ○ Trend by ○ List **Note:** Choose and populate either **Report** or **PA Widget**, but you cannot display both.
PA Widget	Select the PA widget you want to render: ○ Single score ○ Time series

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Choose and populate either **Report** or **PA Widget**, but you cannot display both.
Optional Widget Label	A label to display on the widget.
Size Variant	Select the size of the widget. Choices include: ○ Small ○ Medium ○ Large ○ Extra Large **Note:** Not all size variants apply to all widgets.
Border	Check if you want a border around your widget.
Refresh Interval	Determines the number of minutes before a widget refreshes with new data. The interval begins when a user navigates away from a landing page, and ends when the user comes back to the landing page. **Note:** There is no auto-refresh, but a user can click a refresh button at any time.
Additional Details	Any additional information to note about the widget.
Visualization SysID [Read Only]	Designated ID for the widget.
Report Type [Read Only]	The type of report that renders.

9. Click **Update** or **Submit** to save changes to the page element.
10. Click **Update** to save changes to the landing page.

Set the default landing page

You can set a default landing page to surface the information that is most relevant for your business.

Before you begin

Role required: sn_mgr_workspace.admin

Procedure

1. Navigate to **All** > **Workspace Experience** > **Administration** > **All Workspaces**.
2. Click **Manager Workspace**.
3. Drag and drop the PA indicators or containers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Set the refresh rate interval for the reports or indicators.
5. In the Landing Pages related list, set the value of the **Order** field of the landing page that you want to set as the default to minimum.

   Note:
   The landing page with the minimum order value is considered to be the default landing page.

6. **Optional:** Verify the default landing page assignment by navigating to **Workspace Experience** > **Administration** > **Landing Pages**
   Ensure the landing page that you want to set default has the minimum **Order** value.

Set the enhanced Manager Workspace landing page

Set the enhanced Manager Workspace as the default landing page for an improved user experience.

Before you begin
Role required: sn_wfo_cfg_ws.manager

Procedure
1. Navigate to **All** > **UI Builder** > **Experiences**.
2. In the search field, enter `Manager Workspace`.
3. Select **Manager Workspace**.
4. On the Manager Workspace page, in the Landing Page section, select **Settings** for the Manager Dashboard.
   The Settings page appears for the Manager Dashboard.
5. On the Settings page, in the **Availability** field, select the **Active** check box.

   Note:
   If a message appears about the application scope, select **Edit in original scope** to be able to edit the record.

6. In the **Order** field, enter the minimum value of the landing page.

   Note:
   Verify the landing page that you want to set default has the minimum Order value.

7. Select **Save**.

Result
You can access the enhanced Manager Workspace as the default landing page.

Manager Workspace properties

Modify the Manager Workspace configuration by customizing the system properties to set the Alerts card limit and the widget refresh interval.

Navigate to**All>System Properties>All Properties**.

Alternatively, in your instance, enter `sys_properties.list` in the filter navigator and view the system properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workspace system properties

Property	Description
sn_csm_wfo_workspa.alerts_cards_limit	Enable or disable interaction creation for a non-matched user. • Type: Integer • Value: 15 • Location: **All> System Properties> All Properties**.
sn_csm_wfo_workspa.widget_refresh_interval_long	Set the inactivity period (in days) after which an interaction is closed if no email is received from the customer. • Type: Integer • Value: 120 • Location: **All> System Properties> All Properties**.
sn_csm_wfo_workspa.widget_refresh_interval_short	Set the inactivity period (in days) after which an interaction is closed if no email is received from the customer. • Type: Integer • Value: 30 • Location: **All> System Properties> All Properties**.

Configure filters for Manager Workspace

Configure filters for scheduling and coaching applications and use the default filter for channel management to refine your search results.

Before you begin

Role required: sn_csm_wfo_workspa.admin

About this task

View and analyze data in scheduling and coaching applications based on the filters configured. You can only use the default filters for channel management and cannot configure new filters.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Manager Workspace Configuration** > **Filter Configurations**.
2. Click **New**.
3. On the form, fill in the fields.

Filter Configuration form

Name	Description
Filter Name	Unique name for the filter configuration.
Table	Table for which the filter is configured. **Note:** You can filter only on specific tables or database views for each module. Refer to Filter Configuration Tables in Manager Workspace for a list of tables and database views you can use for each application.
Field	Field on which to filter.
Filter Query	Query to narrow down the filter options.
Type	○ **Choice:** choice type field. ○ **Reference:** reference type field.
Order	Filter display order in Manager Workspace.
Workspace Module	Workforce Optimization for Customer Service module that displays the filter configuration.
Active	Enables the filter configuration in Manager Workspace.
Macroponent	Metadata defined seismic component.

4. Click **Submit**.

Setting up service channels and queues

You can set up service channels, queues, and key performance indicators (KPIs) to route work items automatically to agents based on an agent's availability, capacity, and skills.

With Workforce Optimization for Customer Service, you, as a channel administrator, can set up service channels and work item queues so that managers can view the real-time operational metrics for the work that is being done by their teams and the specific items that their teams are working on. You can also configure real-time refresh intervals for the metrics and lists so that managers can always see the latest information about their teams.

Configure filters to refine the search and view targeted results. Filters are persisted across all channel management pages in the session. To view a list of the default interactive filters and the KPI reports for channels, queues, agents, and groups that you can map to the interactive filters, see Interactive Filters under the Channel Management section. By default, the assignment group filter is applied to all lists and groups that you manage. You can disable interactive filters by using the *sn_channel_mgmt.filter_config.enable* property.

Add service channels and queues

Add service channels and queues to automatically route incoming work items to agents.

Before you begin
Role required: sn_channel_mgmt.admin

About this task
A service channel is a means of assigning a specific type of work items to agents. You can modify the existing service channels or create your own custom service channel.

Procedure

1. To create a service channel, do the following:
   a. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Service Channels**.
   b. Click **New** and see Create a service channel to create the service channel.
   c. Click **Submit**.
   The service channel is created.
2. To create a queue, do the following:
   a. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Queues** or select the service channel and click the **Queues** tab.
   b. Click **New** and see Create a work item queue to create the queue.
   The queue is created in the service channel.

Create assignment rules and groups

Define agent assignment rules and specify groups of agents who are eligible to receive overflow work assignments for a queue.

Before you begin
You must first create a new assignment rule before you create a service channel. For more information, see create a service channel. Use Advanced Work Assignment (AWA) to route work items automatically to agents based on an agent's availability, capacity, and skills.

Role required: sn_channel_mgmt.admin

About this task
An eligible assignment group can consist of one or more groups of agents available to work on items in the queue.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Queues**.
2. Click the queue to which you want to define an assignment rule.
3. In the **Assignment Eligibility** tab, click **New**.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assignment Eligibility form

Field	Definition
Agent assignment rule	Name of the rule that determines how work items are to be assigned. Select an assignment rule from the list.
Eligible at	Length of time in seconds before AWA considers the next set of agents for assignment.
Groups	Groups that are eligible for assignment. ○ Click the lock (🔓) icon to unlock it and select the agent groups in the eligible assignment pool. ○ Click the (🔒) icon to lock it.

5. Click **Submit** to create the eligible or **Update** if modifying an eligible assignment pool.
   The Queues [awa_queues] table is updated with the eligible assignment group.

Note:
For a new service channel, you must first create a new assignment rule and then create a service channel.

Configure KPIs for service channels

Configure key performance indicators (KPIs) in service channels to your teams to track the ongoing work and real-time performance of teams.

Before you begin
Role required: sn_channel_mgmt.admin

About this task
Add the channel Management reports that are by default configured with Workforce Optimization for Customer Service or create a new KPI report that matters the most to you. Key performance indicators help managers perform the following actions:

- Review real-time performance as the team is actively working on tasks across channels and queues.
- Track progress against KPIs and drill down into agents, team, and individual performance.
- Drill down into all queues and monitor ongoing cases, interactions, and tasks.
- Jump in and support agents for help-requested work items using chat whisper or add work notes to a task.
- Refine data in the dashboard using the Assignment Group interactive filter without modifying the reports. For more information, see Interactive Filters.

The KPI scores are automatically refreshed at an interval of five seconds. However, you can modify the refresh interval by adding the *sn_channel_mgmt.kpi_auto_refresh.interval.seconds* property or choose to not automatically refresh using the *sn_channel_mgmt.channels_card_auto_refresh.enable* property. Also, the service channel cards refreshes automatically in 2 minutes as configured in the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

sn_channel_mgmt.channel_card_auto_refresh.interval.seconds system property or you can manually refresh by clicking the Refresh ( ) icon.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Service Channels**.
2. Click the service channel to which you want to add KPIs.
3. In the **Reports** tab, click **Edit**.

   Note:
   You must add the Reports related list if you do not see the **Reports** tab.

4. Select and add the Channel Management reports that are by default configured with Workforce Optimization for Customer Service.

   Note:
   Review the report's definition and add the corresponding filters that are applicable to the service channel that matters the most to you.

5. Click **Save**.
6. **Optional:** To create a KPI report that is explicitly applicable to your teams, do the following:

   a. Navigate to **Reports** > **Create New**.

   b. Fill in the details.
   For more information, see Create a single score report.

   c. Click **Save**.
   The KPI report is created.

   d. Navigate to **Reports** > **Administration** > **Interactive Filters**.

   e. Click **Channel Management Groups Filter**.

   f. Select the Interactive filter references related list and click **New**.
   The Interactive Filter Reference - Channel Management Groups Filter page appears.

   g. Select the KPI report's table name and field name.
   For more information, see Create a reference field interactive filter.

   h. Click **Submit**.

   i. Repeat steps 1 to 4 for each KPI report to be added in the service channel.

   - KPI reports are added with an **Order** being shown as 100, 200 and so on. You can also change the order of a KPI report during selection.
   - By default, the report name is considered as the **Name**. However, you can change the display name per your business needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The KPIs are added to the service channel and appear in the Channels page. The first five KPIs with the lowest order number appear in the service channel cards.

Configure KPIs for queues

Configure key performance indicators (KPIs) for queues so that you can track the incoming work by category in a service channel.

Before you begin
Role required: sn_channel_mgmt.admin

Procedure
1. To add KPIs to a queue, do one of the following.

2. In the **Reports** tab, click **Edit**.

   Note:
   You must add the Reports related list if you do not see the **Reports** tab.

3. Add the Channel Management reports that are by default configured with Workforce Optimization for Customer Service.

   Note:
   Review the report's definition and add the corresponding filters applicable to the service channel that matter the most to you.

4. Click **Save**.
5. **Optional:** To create a KPI report that is explicitly applicable to your teams, do the following:

   a. Navigate to **Reports** > **Create New**.

   b. Fill in the details.
   For more information, see Create a single score report.

   c. Click **Save**.
   The KPI report is created.

   d. Navigate to **Reports** > **Administration** > **Interactive Filters**.

   e. Click **Channel Management Queues Filter**.

   f. Select the Interactive filter references related list and click **New**.
   The Interactive Filter Reference - Channel Management Queues Filter page appears.

   g. Select the KPI report's table name and field name.
   For more information, see Create a reference field interactive filter.

   h. Click **Submit**.

   i. Repeat steps 1 to 4 for each KPI report to be added in the queue.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

The key performance indicators are added to the queue and appear in the **All Queues** tab in the Channels page. By default, the KPI scores are automatically refreshed at an interval of five seconds. However, you can modify the refresh interval by adding the sn_channel_mgmt.kpi_auto_refresh.interval.seconds property.

Configure KPIs for agents

Configure key performance indicators (KPIs) in service channels for your agents so that you can track the agents' ongoing work and real-time performance.

Before you begin

Role required: sn_channel_mgmt.admin

About this task

Add key performance indicators to channels to help managers perform the following actions:

- Review real-time performance of agents who are actively working on tasks across channels and queues.
- Track progress against KPIs and drill down into agents and individual performance.

The KPI scores are automatically refreshed at an interval of 30 seconds. However, you can modify the refresh interval by adding the *sn_channel_mgmt.kpi_auto_refresh.interval.seconds* property. Also, the service channel cards refreshes automatically in 2 minutes as configured in the *sn_channel_mgmt.channel_card_auto_refresh.interval.seconds* system property or you can manually refresh by clicking the Refresh ( ) icon.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Service Channels**.
2. Click the service channel that you want to add KPIs to.
3. Click the Agents Reports related list.
4. Add the Reports for Agents in Channel Management that are by default configured with Workforce Optimization for Customer Service.

   Note:
   Review the report's definition and add the corresponding filters that are applicable to the service channel that matters the most to you.

5. Click **Save**.
6. **Optional:** To create a KPI report that is explicitly applicable to your teams, do the following:

   a. Navigate to **Reports** > **Create New**.

   b. Fill in the details.
   For more information, see Create a single score report.

   c. Click **Save**.
   The KPI report is created.

   d. Navigate to **Reports** > **Administration** > **Interactive Filters**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

e. Click **Channel Management Agent Filter**.

f. Select the Interactive filter references related list and click **New**.
The Interactive Filter Reference - Channel Management Agent Filter page appears.

g. Select the KPI report's table name and field name.
For more information, see Create a reference field interactive filter.

h. Click **Submit**.

i. Repeat steps 1 to 4 for each KPI report to be added in the service channel.

- KPI reports are added with an **Order** being shown as 100, 200, and so on. You can also change the order of a KPI report during selection.
- By default, the report name is considered as the **Name**. However, you can change the display name per the business needs.

Result
The KPIs that are configured in the service channel appear in the Current Work section of the agent's Overview page. For more information, see Track and analyze agents' performance.

Configure supervisor lists for service channels

Configure supervisor lists in a service channel to view the list of active work items across service channels and queues.

Before you begin
Role required: sn_channel_mgmt.admin

About this task
A database view that defines table joins is used for generating reports for a supervisor list. For example, you can create a database view that can join the Case table to the Interaction and Metric tables. When you use this database view, and create a supervisor list to report on the active work items, you may include fields from any of these three tables. For more information, see Database views.

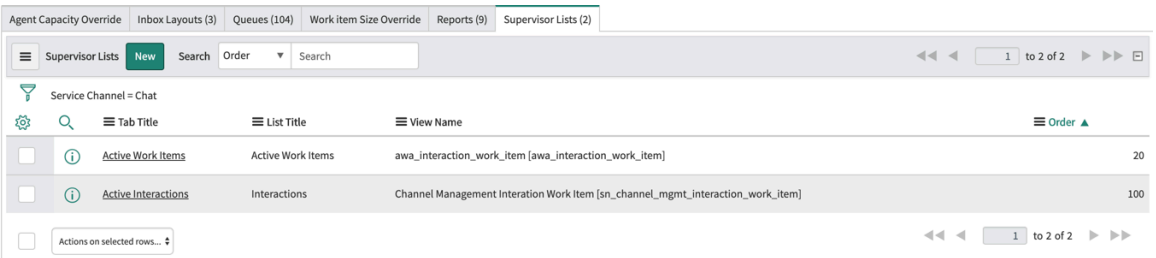
Note:
You can configure three supervisor lists for each service channel. The first three lists with the lowest order number appear in Channel Management.

Procedure
1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Channel Management** > **Service Channels**.
2. Select the service channel to which you want to add a supervisor list.
3. Click the **Supervisor Lists** tab.

Note:
You must add the Reports related list if you do not see the **Supervisor Lists** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click



New.

5. On the form, fill in the fields.

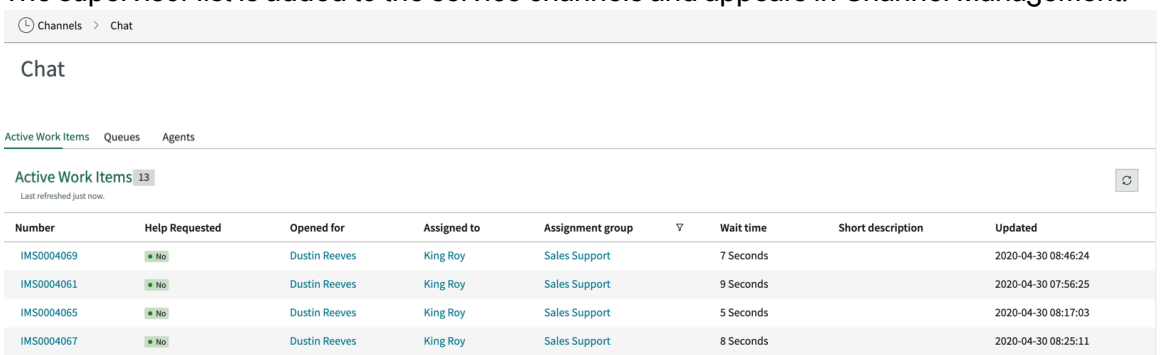
Supervisor Lists form

Field	Description
List Title	Display name for the list.
Tab Title	Title for the tab that appears in the manager workspace.
Service Channel	Service channel in which the list appears.
View Name	Database view for the service channel.
Order	Number that displays the order. **Note:** The first three lists with the lowest order number appear in Channel Management.

6. Click **Submit**.

Result

The supervisor list is added to the service channels and appears in Channel Management.



Use extension points to configure the sort order

Use scripted extension points to configure the sort order for the columns in the All Agents and All Queues lists for Channel Management.

Before you begin

Role required: admin

About this task

Use the *sn_channel_mgmt.ChannelMgmtExtensionPoint* extension point and create an implementation to configure the sorting mechanism for the All Agents and All Queues lists in Channel Management. You can create multiple implementations; however, the implementation with the lowest order number is executed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_channel_mgmt.ChannelMgmtExtensionPoint`.
3. On the form banner, click the link **here** to edit the record.
4. Click **Create Implementation** in the related links to create your sorting mechanism extension point script.
5. Add or modify the columns and sort directions in the `vardata` section.

```
    /*
        This method is used to define the default sort order for Agents list in 'Channel & Queue Management' module in
Manager workspace. Please specify the columns and direction of sort in appropriate format.
        Eg: var data = [{
                column: 'can_take_work',
                direction: 'DESC'
            }, {
                column: 'presence_state',
                direction: 'ASC'
            }, {
                column: 'utilization',
                direction: 'ASC'
            }];
    */
    getDefaultSortOrderForAgentsList: function(){
        var data =[];
        return data;
    },
```

6. Click **Update**.

Result

The sorting mechanism is applied to the defined columns in the All Queues and All Agents lists in Channel Management.

Example:

The Presence State column with **ASC** as a sort direction in the extension script displays the Presence State records in an ascending order in the All Agents list. For more information, see Track and analyze agents' performance.

Configure columns in the All agents list

Use scripted extension points to configure the columns in the All agents list for Channel Management.

Before you begin

Role required: admin

About this task

Use the *sn_channel_mgmt.AgentListColumns* extension point to modify the current implementation to configure the columns for the All agents list in Channel Management.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for *sn_channel_mgmt.AgentListColumns*.
3. On the form banner, click the link **here** to edit the record.
4. Click **AgentListColumnsOOBImpl** in the related list to configure the columns for All agents.
5. Add or modify the columns in the `getColumns` section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

```
    * {Object}:  object containing the following properties:
    *   columns - list of columns for 'Agents' List. Each column has the following properties
            label: Column Label
            internalType: Internal type of a column
            columnOrder: Order at which this column appears in the UI (default: 100000)
            active: Used to show/hide a column (default: active)
            table: Table name for columns with internal type as reference
            useRelativeTime: set to true, in order to display the relative time for columns with internal type as glide_date_
            selectedTabIndex: used to specify the tab index to navigate to. Used in case of reference fields
            isSortable: used to enable/disable sorting
            isFilterable: used to enable/disable filtering
    *   rows - data for all the defined columns against each <Agent, Service Channel>
    */
    getColumns: function(agentIds, channelIds) {
        var rows = {};
        var columns = {};

        return {
            "columns": columns,
            "rows": rows
        };
    },

    type: 'AgentListColumns'
```

6. Click **Update**.

Configure columns in the All queues list

Use scripted extension points to configure the columns in the All queues list for Channel Management.

Before you begin

Role required: admin

About this task

Use the *sn_channel_mgmt.QueueListColumns* extension point to modify the current implementation to configure the columns for the All queues list in Channel Management.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for *sn_channel_mgmt.QueueListColumns*.
3. On the form banner, click the link **here** to edit the record.
4. Click **QueueListColumnsOOBImpl** in the related list to configure the columns for All agents.
5. Add or modify the columns in the `getColumns` section.

Example

```
    * {Object}:  object containing the following properties:
    *   columns - list of columns for 'Queues' List. Each column has the following properties
            label: Column Label
            internalType: Internal type of a column
            columnOrder: Order at which this column appears in the UI (default: 100000)
            active: Used to show/hide a column (default: active)
            table: Table name for columns with internal type as reference
            useRelativeTime: set to true, in order to display the relative time for columns with internal type as glide_date_
            selectedTabIndex: used to specify the tab index to navigate to. Used in case of reference fields
            isSortable: used to enable/disable sorting
            isFilterable: used to enable/disable filtering
    *   rows - data for all the defined columns against each queue
    */

    getColumns: function(queueIds, queueGroups) {
        var rows = {};
        var columns = {};
        return {
            "columns": columns,
            "rows": rows
        };
    },

    type: 'QueueListColumns'
```

6. Click **Update**.

Schedule a daily report

Generate and distribute a daily scheduled report that summarizes the agent's work performance via email.

Before you begin
Role required: sn_channel_mgmt.admin

About this task
The scheduled job *Send Daily Agents Report* executes the event *sn_channel_mgmt.agents_report*, which then triggers the *Daily Agents Report* notification. Next, the notification *Daily Agents Report* executes an email script *daily_agents_reports* to send an email to all managers. To change the existing report, modify the *daily_agents_reports* email script.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. Search and click **Send Daily Agents Report**.
   The scheduled script *Send Daily Agents Report* form appears.
3. Click the link **here** to edit the record.
4. Select the **Active** check box.
5. In the **Run** field, ensure that the option **Daily** is selected.
   The script, by default, sends the agents' work summary report daily to the managers.
6. Select the **Time zone**.
7. Click **Update** to update the scheduled job or **Execute Now** to execute the scheduled script immediately.

Result
All managers and additional managers of the teams receive an email notification that summarizes their agents' performance.

Setting up Scheduling in Workforce Optimization for Customer Service

Manage events using the team calendar. Create different types of event categories. Use scripted extension points to customize event types.

Configure event categories for Manager Workspace

Add an event category. Create or update field configurations for events. You can also specify if an event category must be excluded when the shift coverage for agents are calculated.

Before you begin
Role required: sn_shift_planning.admin

The following event category configurations are available by default:

- Work
- Meeting
- Training
- Time Off
- Break

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Scheduling** > **Event Categories**.
2. In the **Event Categories** list, click **New**.
3. In the **Name** field, enter a name for the event category.
4. If you want to exclude this event category for agent coverage calculation, enable the **Exclude from coverage** check box.
5. In the **Event field configuration** dialog box, edit the following configuration as necessary:

Note:
You can remove any property that does not apply to a type of event.

```
{
           "create": {                //Creates an event type
form
               "attendees": {         //Adds the Attendees
field
               "mandatory": true,     //Sets this field as
mandatory
               "readOnly": false,     //Sets this field as
read-only
               "allowAllUsers": false //Allows you to only add
users managed by the logged-in user; to add any user, set this
value to true
               },
               "startDate": {
               "mandatory": true,
               "readOnly": false
               },
               "endDate": {
               "mandatory": true,
               "readOnly": false
               },
               "additionalSelectors": [    //Add custom fields
to the form
               {
                   "fieldLabel": "Select Shift", //Name of the
field that displays on the form
                   "table":
"sn_shift_planning_shift_plan", //Name of the table referenced
by the field
                   "field": "name", //Any field from the
selected table whose display values must be shown in the
custom field
                   "value": "",
                   "mandatory": true,
                   "additionalQueryString": ""
               }
               ]
           },
           "edit": {                   //Edit an event type
form
               "attendees": {
               "mandatory": true,
```

                    "field": "name",
                    "value": "",
                    "mandatory": true,
                    "additionalQueryString": ""
                }
                ]
            }
        }
```

6. Click **Submit**.

Create event types to display them on the team calendar

Create multiple events from the same category and add them to the team calendar.

Before you begin

Role required: sn_shift_planning.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Scheduling** > **Event Configuration**.
2. Click **New**.
3. On the form, fill in the fields.

Event configuration form field

Field	Description
Name	Unique name for the event type.
Priority Order	Priority of the event type that you want to exclude from the coverage. The higher the number means the higher the priority. For example, let's say you are attending a work event for four hours in a day. You have marked that time window as both a time off and as a meeting event type. If time off has a higher order of priority, then the application excludes that event type from coverage.
Color	Color that identifies this type of event in the team calendar.
Active	Option that when enabled, displays the event type on the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Category	Type of event, for example, meeting, break, or time off.

4. Click **Submit**.

> **Note:**
> After an event type is assigned to a shift, that event type cannot be deleted.

Configure properties for schedule adherence and conformance

Configure schedule adherence properties to calculate the adherence and conformance of your agents so that you can improve the operational efficiency of your organization.

Before you begin
Role required: admin

About this task
The threshold settings for adherence and conformance indicate how many minutes early or late an agent can clock in or clock out to a scheduled work shift without being considered as non-adherent.

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Schedule Adherence** > **Settings**
2. On the form, fill in the fields.

Schedule Adherence properties form

Field	Description
Enable Schedule Adherence	Calculation and information about the agents' adherence to the schedules.
Threshold for early checkin for planned shift (in Minutes)	Time that you can set for early check-in. This time is the acceptable time for an agent to start the work shift before the actual shift time. The default value is 60 minutes. For example, if an agent's planned work shift is 08:00 to 17:00 and the agent clocks in at 07:00, the threshold time allows flexibility and the agent isn't considered as a non-adherent agent.
Threshold for adherence % of Time Worked Summary	Percentage that you can set for a threshold in adherence. The agents who don't qualify to be above the defined threshold value (70%) are considered non-adherent agents.
Lower threshold conformance % of Time Worked Summary	Lower threshold percentage that you can set for flexibility in conformance. The agents who don't qualify for the defined lower and upper conformance threshold values (80-120) are considered as non-conformant agents. The default value is 80%.
Upper threshold for conformance % of Time Worked Summary	Upper threshold percentage that you can set for flexibility in conformance. The agents who don't qualify for the defined lower and upper conformance threshold values (80-120) are considered as non-conformant agents. The default value is 120%.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Default threshold time for clock-out event generation (in Minutes)	Default threshold time to generate an automatic clock-out event if an agent fails to clock out. The default value is 60 minutes. For example, if an agent's planned work shift is 08:00 to 17:00 and the agent fails to clock out at 17:00, the system waits for 60 minutes as the threshold time and generates an automatic clock-out event.

3. Click **Save**.

Scheduling in Workforce Optimization for Customer Service

Monitor schedule adherence of your agents

Analyze adherence and conformance from the time worked summary

Modify schedule adherence and conformance formulas by using extension points

Configure and tweak the schedule adherence and conformance formulas using scripted extension points so that you can customize them for your organization.

Before you begin

Role required: admin

About this task

Use the *sn_shift_planning.ScheduleAdherenceExtPt* extension point and create an implementation to configure the formulas. You can create multiple implementations. However, the implementation with the lowest order number is executed.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_shift_planning.ScheduleAdherenceExtPt`.
3. On the form banner, click the link **here** to edit the record.
4. To create your extension point script, click **Create Implementation** in the related links.
5. Modify the formulas for calculating the schedule adherence and conformance in the `getAdherencePercentage` and `getConformancePercentage` methods.

```
var ScheduleAdherenceExtPtImp = Class.create();
ScheduleAdherenceExtPtImp.prototype = {
    initialize: function() {
    },

    getAdherencePercentage: function(plannedTime, timeNotWorked, availableNonPlannedTime, totalTimeWorked){
        var adherencePercentage = ((plannedTime - timeNotWorked) / (plannedTime + availableNonPlannedTime)) * 100;
        return adherencePercentage;
    },

    getConformancePercentage: function(plannedTime, timeNotWorked, availableNonPlannedTime, totalTimeWorked){
        var conformancePercentage = (totalTimeWorked / plannedTime) * 100;
        return conformancePercentage;
    },

    type: 'ScheduleAdherenceExtPtImp'
};
```

6. Click **Update**.

Result

The schedule adherence and conformance calculations are based on the formulas in the implementation.

Event type extension points in Workforce Optimization for Customer Service

Use extension points to call scripts for event categories such as meeting, time off, or work time.

To see a list of extension points that you can use for Workforce Optimization for Customer Service, navigate to **System Extension Points** > **Scripted Extension Points**. In the Extension Points list, open the `sn_shift_planning.EventManager` extension point.

Use scripted extension points to integrate customizations without altering the core components in the application code. When customizing a base application, you implement the scripted extension points by creating the custom script includes and registering them against the scripted extension points.

Extension points for event types

Extension point name	Description
`sn_shift_planning.EventManager`	Implement this extension point to customize the logic for the event categories that you create.

You can use extension points to create events such as meeting, training, and time-off requests. For example, for extension point implementations, see the following extension instances in the Implementations related list:

Extension scripts for creating events

Category	Extension Script
Meeting	`AgentScheduleMeetingEventManager`
Break	`AgentScheduleBreakEventManager`
Training	`AgentScheduleTrainingEventManager`
Time off	`AgentScheduleTimeOffEventManager`
Work	`AgentScheduleWorkEventManager`

Related topics

Using extension points to extend application functionality

Synchronize team calendar with Microsoft Outlook

Managers and agents can synchronize their calendars and events with Microsoft Outlook.

As a user with admin role, you can enable this feature by installing Microsoft Exchange Online Spoke. See Set up.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Ensure that you grant the following Graph API permissions to synchronize Microsoft Outlook with team calendar.

Graph API permissions

Permission	Type
Calendars.ReadWrite	Delegated
Calendars.ReadWrite.Shared	Delegated
Calendars.ReadWrite	Application

After installing Microsoft Exchange Online Spoke, set the *sn_wfo_outlook.enable_outlook_sync* system property to `true` in the System Properties [sys_properties] table. Add the email IDs that you want to synchronize in the User [sys_user] table.

Setting up Teams Workforce Optimization for Customer Service

Organize your teams into assignment groups and create reports for those groups so that you can gain visibility into the team's performance.

As an administrator, you can configure KPIs as well as child KPIs. The child KPIs appear when you drill-down into top level KPIs. For example, Closed Cases KPI has P1 Cases, P2 Cases as child KPIs.

Create KPI groups to monitor team performance

Create key performance indicator (KPI) groups with the KPIs that matter most to your teams. When you associate your KPI groups with assignment groups, you can monitor your team's performance.

Before you begin
Role required: sn_team_perf.team_performance_admin

About this task
By default, the KPIs that are associated with your KPI assignment groups are scheduled to collect data daily. The KPIs must have the following indicator breakdown:

- Assignment groups
- Assigned to

Procedure

1. Create a KPI group.
   a. Navigate to **Workforce Optimization for Customer Service** > **Team Performance** > **KPI Groups**.
   b. Click **New**.
   c. In the **Name** field, enter a name for the KPI group.
   d. In the **Type** menu, select **Teams**.
   e. Right-click the form header and click **Save**.

   You can add up to five KPIs to a KPI group. For more information about KPIs and how the aggregates are calculated, see the overview video in the Teams example section.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Add KPIs to a KPI group.
   a. In the **KPIs** related list, click **New**.
   b. In the **KPI** field, select the KPI to apply for this group.
   c. Click **Submit**.
3. Add KPI assignment groups to the KPI group.

   Note:
   - You can associate a KPI assignment group only to one KPI type.
   - You can add additional managers to each assignment group.
   - You can associate a user with a KPI group as the primary assignment group for that user.

   a. In the **Assignment Groups** tab, click **Edit**.
   b. Move the desired assignment groups from the Collection to the Assignment Groups list.
   c. Click **Save**.

Add managers to a KPI assignment group

Assign one or more managers to each KPI assignment group so that they can gain visibility into the group and monitor the team's performance.

Before you begin
Role required: sn_wfo_admin or admin

About this task
You can associate a user with a primary assignment group by selecting the group in the user record.

Procedure
1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Team Performance** > **Additional Managers**.
2. Click **New**.
3. In the **Assignment Group** field, select an assignment group.
4. In the **Manager** field, select a manager you want to add for this assignment group.
5. Click **Submit**.

What to do next
Analyze the performance trends for your teams.

Setting up Coaching in Workforce Optimization for Customer Service

Manage agent skills and assess the quality of completed tasks. Use predictive intelligence to recommend skills for agents. Train your agents with internal and external learning content.

Configure an indicator to display in the Coaching Overview tab in Workforce Optimization for Customer Service

Add a system property to display the desired indicator in the Coaching Overview tab in the Coaching application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Set the map application scope to **Coaching**. For information on how to set the scope, see Set map application scope.

Role required: admin

About this task

Replace the existing indicator with any Performance Analytics indicator that has the Assigned to and Assignment group breakdowns to display in the Coaching Overview tab in the Coaching application.

Procedure

1. In the application navigator, enter `sys_properties.list`.
2. Click **New**.
3. Enter the following field values.

System property form field

Field	Value
Name	sn_coaching.coaching_overview_default_quality_indicator
Application	Coaching
Type	string
Value	{"title": "<name>", "sys_id": "<sys id>"} where <name> is the name of the indicator that you want to display in the Coaching Overview tab and <sys id> is the unique record identifier (sys_id) of the indicator. Example: ○ Name: % of P1 incidents resolved on first call. ○ Sys ID: 0423e59387401010ca99e12397cb0bbb {"title": "% of P1 incidents resolved on first call", "sys_id": "0423e59387401010ca99e12397cb0bbb"}
Read roles	sn_coaching.coach

4. Click **Submit**.
   The configured indicator replaces the existing indicator in the Overview tab in the Coaching application in Workforce Optimization for Customer Service.

Setting up skill prediction in Workforce Optimization for Customer Service

Collect skill data based on skills agents have used for case resolution. Use supervised learning to recommend these skills for agents to resolve similar open case. You can also find patterns in how skills are used for case resolution and use unsupervised learning to recommend skills for agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Set up skills. For more information, see Skills Management.

Predictive Intelligence must be set up and configured on your instance to train the models. For more information, see Predictive Intelligence.

Activate the Skill Recommendation application plugin (com.snc.sre) to use predictive intelligence for recommending skills.

Role required: sn_sre.admin

Procedure

1. Configure the properties for the Skill Recommendation application.
2. Run the solution definition models such as *`Recommend similar skills for cases`* or *`Recommend skills from similar cases`* to train the supervised and unsupervised solutions.
   For more information on training a solution, refer to Create and train a similarity solution.
3. Run the *`Start skill prediction`* scheduled job everyday to start predicting skills for cases or agents.
   This scheduled job is inactive by default. When you activate it, the job runs daily at 1:00 AM on all cases resolved the previous day. The job then adds the skills to the User Predicted Skill [sn_sre_user_predicted_skill] table and Task Predicted Skill [sn_sre_task_predicted_skill] table.

> **Note:**
> Recommended skills will start appearing once the number of records in [sn_sre_task_predicted_skill] table exceeds the value defined in the [sn_sre.user_predicted_skill_threshold] Components installed with Workforce Optimization for Customer Service.

Use extension points for skill prediction

Use scripted extension points to customize skill prediction for tasks.

Before you begin

Role required: admin

About this task

You can create multiple implementations for each extension point and provide an order number for each implementation. The implementation that has the lowest order number is executed.

Note that the Skill Recommendation extension point is included with the Skill Recommendation (com.snc.sre) plugin.

Procedure

1. Navigate to **All** > **System Extension Points** > **Client Extension Points**.
2. From the Extension Points list, select **Skill Recommendation** (sn_sre.SkillPredictionAPI).
3. Either create a new skill recommendation implementation or modify an existing one.
   - To create a new skill recommendation implementation, click **Create Implementation**.
   - To modify an existing implementation, from the Implementations related list, select a class.
4. Modify the script as required.
5. Click **Update**.

Configure a list menu to display in the Learning tab in Workforce Optimization for Customer Service

Add list or list categories to modify the list menu for Coaching with Learning in the Coaching application in Workforce Optimization for Customer Service.

Before you begin

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Set the map application scope to **Coaching With Learning**. For information on how to set the scope, see Set map application scope.

Role required: admin

Procedure

1. In the application navigator, enter `sys_ux_list_menu_config.list`.
2. Click **Learning list** record.
3. Under UX list category, click **New**.
4. Enter the following field values.

Learning list form field

Field	Value
Title	Enter the name of the list category.
Description	Enter a short description about the list category.
Order	Enter a value to set the position of the list category in the current list.
Active	Select the check box to make the list category visible.

5. Click **Submit**.
6. Under UX Lists, click **New** to create lists under that list category.
7. Enter the following field values.

UX lists form field

Field	Value
Title	Enter the name of the list.
Table	Select the table for the data that you want to display in the list.
Configuration	Select **Learning List**.
Columns	Select the columns that you want to display for the table.

8. Click **Submit**.
9. Click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.

Integrate Coaching with Learning with third-party learning management systems

Connect your ServiceNow instance with third-party learning sites to pull learning content into your repository.

Before you begin

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Role required: learning_admin

About this task

Applications to integrate third-party learning sites

Activating the Coaching with Learning (sn_coach_lrn) plugin enables the following applications from the ServiceNow Store:

- Enterprise Service Management Integrations Framework
- Cornerstone spoke
- Pluralsight spoke
- Udemy spoke

Procedure

1. Create the integration source for each of your third-party systems.

   Note:
   Cornerstone, Pluralsight, and Udemy integrations are available by default.

   a. Navigate to **Integrations Framework** > **Source**
   b. Click **New**.
   c. In the **Name** field, enter the name of the integration source, for example, Pluralsight.
   d. Right-click the form header and click **Save**.
   e. In the Integration Services related list that appears, click **New**.
   f. On the form, fill in the fields:

Integration service form field

Field	Description
Name	Name of the integration service, for example, Pluralsight.
Import set tables	List of intermediate tables which store records from the third-party system. **Note:** This field is enabled only when a Scheduled pull service is selected in the **Service type** field.
Flow	Flow that interacts with the third-party system to pull the required data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option to indicate that the integration service is available for use.
Application	Application which includes the integration service record.
Source	Name of the third-party system with which you want to integrate your application.
Order	Order in which you want to run transformation scripts.
Service type	Option to indicate the type of service **Scheduled pull** or **Ondemand Push**.
Retry policy	Configuration set to push a record if the last push fails. **Note:** This field appears only when an Ondemand Push service is selected in the **Service type** field.

g. Click **Submit**.

2. Integrate your ServiceNow instance with your third-party learning source accounts.
The records from the third-party content are pulled into your ServiceNow instance using and API call. To successfully run this API call, you must do the following:

   a. In the application navigator, enter `sys_properties.list`.

   b. For each of the following properties, set the value to **1638400**:

      - com.glide.transform.json.max-partial-length
      - com.snc.process_flow.reporting.serialized.val_size_limit

   For more information on these system properties, see Coaching With Learning System Properties.

3. Activate schedule flows to integrate third-party learning content.

   a. Navigate to **Process Automation** > **Flow Designer**

   b. In the **Flows** section, select each of the following flows and click **Activate**:

      - Trigger Cornerstone Learning Sync
      - Trigger Pluralsight Learning Sync
      - Trigger Udemy Learning Sync

   c. Navigate to **Learning** > **Administration** > **Learning System Configuration**

   d. Select each of the third-party learning sources and set the **Active** field to **true**.
   Schedule flows automatically run on a scheduled basis to synchronize third-party learning content into your ServiceNow instance.

4. After configuring the third-party integration sources, you can refresh the entire third-party content or synchronize new and updated services into your ServiceNow instance.

   - To refresh the entire content, set the *full_pull* property to **true**.

     Note:
     We recommend that you periodically refresh the entire content.

   - To synchronize new and updated services, set the *full_pull* property to **false**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Open any integration source for which you want to pull content.

b. Click **Run Job**.
The integration framework pulls the corresponding third-party learning courses into the Learning External Content [sn_lc_external_content] table on your ServiceNow instance.

When synchronizing new and updated services, the content is populated as described in the table.

Third-party learning courses

Third-party content	New and Updated Services synchronized
Udemy	○ Courses ○ User activity
Cornerstone	○ Users ○ Courses ○ User activity
Pluralsight	○ Courses ○ Course progress such as percentage

What to do next

Add external courses to Coaching With Learning

External Content Integration Sources

When you integrate Coaching With Learning with third-party learning management systems, the source record for Cornerstone OnDemand, Pluralsight, and Udemy applications are automatically created in the Enterprise Service Management Integrations Framework. These source records contain a predefined set of properties and integration services.

Integration source record for Cornerstone Ondemand

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Cornerstone.
Properties	Set of properties that are predefined for Cornerstone OnDemand application. • **page_size**: Number of records that are pulled through an API call from Cornerstone OnDemand application. • **full_pull**: When set to **True**, all the active users and learning courses from the Cornerstone OnDemand system are pulled into the ServiceNow instance. When set to **False**, modified users, modified transcripts, and updated courses are pulled from the Cornerstone OnDemand system into the ServiceNow instance. • **url_prefix**: Deep link prefix to pull learning objects from Cornerstone OnDemand system during run time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration source record for Cornerstone Ondemand (continued)

Field	Description
	• **pull_offset_hours**: The time, in hours, calculated from the last successful run for the next synchronization to occur For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.
Integration Services	Services interact with Cornerstone Ondemand application to pull or push learning courses. • **Course assign service**: Assigns a course to an employee in the Cornerstone Ondemand application. • **Sync users**: Maps users in the Cornerstone OnDemand system to users in the ServiceNow system using email Ids. **Note:** If you want to use user_id or user_name field for mapping users, then override**getCornerstoneUser method** in the sn_lc.UserMappingUtil script. • **Courses**: Pulls learning courses from Cornerstone OnDemand system into ServiceNow. • **User activity**: Pulls details of user activity on learning courses from Cornerstone OnDemand system into ServiceNow.

Integration source record for Pluralsight

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Pluralsight.
Properties	Set of properties that are predefined for the Pluralsight system. • **page_size**: Number of records that are pulled through an API call from Pluralsight. • **full_pull**: When set to **True**, all the learning courses are pulled from Pluralsight into the ServiceNow instance. When set to **False**, updated learning courses progress is pulled from Pluralsight into the ServiceNow instance. • **pull_offset_hours**: Value that is considered for pulling modified records. For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.

Integration source record for Pluralsight (continued)

Field	Description
Integration Services	Integration services interact with Plural sight application to pull learning courses into ServiceNow. • **Courses**: Pulls learning courses from Pluralsight into ServiceNow. • **Course progress**: Pulls the progress of learning courses from Pluralsight into ServiceNow.

Integration source record for Udemy

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Udemy
Properties	Set of properties that are predefined for the Udemy system. • **page_size**: Number of records that are pulled through an API call from Udemy into ServiceNow. • **full_pull**: When set to **True**, all the learning courses are pulled from Udemy into the ServiceNow instance. When set to **False**, updated learning courses and learning course progress are pulled from Udemy into the ServiceNow instance. • **pull_offset_hours**: Value that is considered for pulling modified records. For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.
Integration Services	Integration services interact with Udemy application to pull learning courses into ServiceNow. • Pull Courses: Pulls learning courses from Udemy into ServiceNow. • Pull user activity: Pulls details of user activity on learning courses from Udemy into ServiceNow.

Setting up Demand Forecast in Workforce Optimization for Customer Service

Configure the data that you want to collect, modify forecast parameters, and calibrate manual adjustments using Demand Forecast.

Configure the data collection for resources demands

Define the data you want to collect for cases, interactions, or any table to forecast the number of agents that you require for your staffing needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

You must have the MetricBase plugin [com.snc.clotho] enabled to use Demand Forecast in Workforce Optimization for Customer Service. For more information, see Requesting the MetricBase product.

Note:

- When you change the forecast parameters or resource conversion formula, the new values for resource forecasts will not reflect on the team calendar until the **Forecast resources for future** scheduled job is executed. Your administrator can run the scheduled job on-demand to view the changes in the team calendar.
- Once the **Historical data collection** job is run for specific data collection definitions, the column **Is historical data collected** in the Forecast Configurations [sn_agent_forecast_configuration] table is set to **true**. Hence, the historical data collection will not run even if you add data for the past dates from the back-end. Historical data is stored for 1098 days for forecasts set at daily interval. Beyond three years, historical data is cleaned and cannot be saved.

Role required: sn_agent_forecast.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for Customer Service** > **Demand Forecast**.
2. Define the data you want to collect for forecasting agents to resolve cases.
   a. Click **Data Collection Definitions**.

      See the Forecast Configuration table in Scheduling for the list of configurations that are available by default.

   b. Click **New**.
   c. On the form, fill in the fields:

Forecast Configuration form

Field	Description
Name	Unique name for the collection forecast configuration.
Type	Data Collection Definition type is set to **Collection** by default and collects data using a scheduled job.
Table	Table that is used for collecting data. From the list, do one of the following: ▪ To collect data to forecast cases, select **Cases**. ▪ To collect data to forecast interactions, select **Interactions**.
Condition	Conditions that you can set so that you can capture the data that you need.
Date Field	Data that you can add to forecast for the future.

   d. Click **Submit**.
   e. Create an index for the table you have created using the date field and the conditions you have added to the table. For information on creating a table index, see Create a table index.
3. Add parameters to be defined in the formula to calculate agent count per hour in a day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Click **Formula Parameters**.

b. In the **Name** field, enter a name for the parameter.

c. Do one of the following:

- If you need to add a value to be calculated for the formula, in the **Value** field, enter the value.
- If you want to use the performance analytics score card API or a custom API, click **Advanced,** and add the script.

The Average Case Work Time and Average Chat Work Time forecast parameters provided by default are examples of how you can use scripts to add the parameters. For a list of parameters provided by default, see Forecast Parameters in Scheduling.

d. Click **Submit**.

4. Configure the resource conversion formula.

a. Click **Resource Conversion Formula**.

b. Click **New**.

c. On the form, fill in the fields.

Forecast Configuration form

Field	Instructions
Name	Name for the resource forecast configuration.
Type	Type is set to **Resource Conversion Formula**.
Formula	Formula to calculate the forecasted number of agents that you need. In the Related Links section, do the following: ▪ Click **Browse Forecast Configuration**, select the forecast configuration to add to the formula and click **Add**. ▪ Click the Browse Forecast Parameter, select the forecast parameter to add to the formula and click **Add**. **Note:** **FC** refers to Forecast Configuration and **FP** refers to Forecast Parameter.

d. Click **Submit**.

5. Associate an assignment group with a Resource Conversion Formula.
You can assign a forecast configuration to multiple assignment groups, but an assignment group can have only one forecast configuration.

a. Click **Group Forecast Configurations**.

b. Click **New** and do the following:

- In the **Assignment Group** field, click the search icon and select the group to which you want to associate a forecast configuration.
- In the **Forecast Configuration** field, click the search icon and select a **Resource Conversion Formula**.

What to do next

Run the *`Collect historical data for demand forecast data collection definitions`* scheduled job. For more information, see Schedule jobs for Demand Forecast.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related topics

Use Demand Forecast

Modify forecast parameters to visualize forecast data

Configure and tweak forecast parameters to see how the forecast behaves when you vary the period length, periods to forecast, or algorithm. You can view the modified forecast on the time-series visualization at intervals of 15-, 30-, and 60-minute intervals and daily interval.

Before you begin

Role required: sn_agent_forecast.admin and sn_csm_wfo_workspa.manager

The user with these roles must also be a manager of the assignment group that is associated with the resource conversion formula.

About this task

You can define the start and end dates for which you want to create the forecast data. The start date is always the current date. The end date is calculated based on the period length and the periods to forecast. The periods to forecast is represented in days or hours. For example, if the period length is 1 day and the period to forecast is 30 days, then the end date is 30 days including the current day.
For 15-, 30-, and 60-minute intervals, managers can generate forecast up to 28 days. For daily interval, managers can generate forecast up to 365 days.

Forecast results are displayed with the historical data so that the user can compare the patterns of historical data with the forecast. The historical data of 14 days prior to the current date will be displayed with forecasts of 15-, 30-, and 60-minute intervals. The historical data of four weeks to the prior date will be displayed with forecasts of daily intervals. You can customize and configure historical data to be displayed using the *sn_agent_forecast.number_of_historical_days_in_timeseries_chart* and *sn_agent_forecast.number_of_historical_days_in_daily_timeseries_chart* system properties..

The published forecast is reflected on the team calendar only when the **Forecast resources for future** job is executed.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click **Forecasts**.
4. Select the forecast model for which you want to view the time-series data.
   You can visualize each of the forecast parameters that were created for the forecast model.
5. Click the gear ( )icon.
6. Click the plus (+) sign.
7. Configure the forecast parameter.
   a. From the **Period length unit** list, select the unit for the length of the period to forecast.
   b. In the **Period length** field, enter the duration of the period to forecast.
   c. In the **Periods to forecast** field, enter the number of seasons, which is the period length, for which you want to forecast.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. In the **Interval** field, select 15-, 30-, and 60-minute intervals or Daily interval value of the period to forecast.

e. Click **Update**.
The forecast is created in **Draft** state. The forecast is calculated and displays in the forecast model. You can analyze the forecast with the new forecast parameters before you publish it.

8. To preview a forecast before publishing it, click **Preview**.
he forecast is calculated using the algorithm and parameters configured in the forecast parameter. When you create a manual adjustment to predict future resources, Demand Forecast overlays the adjustment in the time-series chart.

9. Publish the forecast parameters.

a. To publish a newly created forecast parameter, click **Save** and then click **Publish**.

b. To publish an active forecast parameter, click **Publish**.

Note:
You can only have one forecast in **Published** state, which is used to calculate the resources.

When the forecast parameter is published:

- The state of the record changes to **Published**.
- The **Forecast resources for future** job runs daily and uses the published forecast parameters to calculate the agent forecast. The calculation uses the resource conversion formula to calculate the forecast data from the current point forward. You can view the updated resources in the team calendar.
- Any other forecast parameters that were created would be unpublished and inactive.

What to do next

Create a manual adjustment for a forecast

Adjust forecasts manually to fine-tune them for greater accuracy. Create the adjustment for a specified time period and analyze how it impacts your forecast.

Before you begin

Role required: sn_agent_forecast.admin and sn_csm_wfo_workspa.manager

The user with these roles must also be a manager of the assignment group that is associated with the resource conversion formula.

About this task

Managers can make manual adjustments to the forecasts for 15-, 30-, and 60-minute intervals and daily interval. Managers can generate forecasts with manual adjustments at daily interval and can view the adjustments at a more granular level for that same period at 15-, 30-, and 60-minute intervals.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click **Forecasts**.
4. Select the forecast model for which you want to make a manual adjustment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Click the Manual Adjustments ( ) icon.
6. Make a manual adjustment.
   a. Click the plus (+) sign.
   b. Fill in the following fields.

Manual adjustment form field

Field Name	Description
Name	Unique name for the manual adjustment.
Start Date Time	Date and time when the manual adjustment for the forecast must start.
End Date Time	Date and time when the manual adjustment for the forecast must end.
Adjustment Unit	Unit for the manual adjustment. Available values: ▪ Percentage—adjustment value percentage. For example, if the forecast data shows case count and if the adjustment value is 15, the manual adjustment shows a 15% increase in case count than the forecast data. ▪ Number—adjustment value count. For example, if the forecast data shows case count and if the adjustment value is 15, the manual adjustment shows 15 more cases than the forecast data.
Adjustment Value	The numeric value for which you want to adjust the forecast. The value is applied to each group in the Groups [sys_user_groups] table. The manual adjustment visualization on the time-series chart displays the data for your groups. For example, let's assume that the value is 15 and the unit is number. If you have two groups for a forecast model and both have 2 agents each before you do the manual overlay, when you enter the value as 15, it is applied to each of the two groups and the total value displays as 34. This is calculated as follows: ▪ Two agents for group A + the adjustment value 15 = 17 ▪ Two agents for group B + the adjustment value 15 = 17 The total is 34. If you have two groups for a forecast model and both have a volume (for example: Cases/ Chats) of 2 before you do the manual overlay, when you enter the value as 15, it is applied to each of the two groups and the total value displays as 34. This is calculated as follows: ▪ Two cases/chats for group A + the adjustment value 15 = 17 ▪ Two cases/chats for group B + the adjustment value 15 = 17 The total is 34.

   c. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The manual adjustment is created in **Draft** state. The manual adjustment is calculated and displays as a green line in the forecast model. You can analyze or update the forecast with this manual adjustment before you publish it.

7. Publish the manual adjustment.
   a. Click the saved manual adjustment that you want to use for forecasting resources.
   b. Click **Publish**. The state changes to **Ready to Publish**.
   When the **Forecast resources for future** job is run, it calculates the forecast, checks for manual adjustments, applies those values if any, and moves it to the **Published** state.

Note:

- When you unpublish a forecast, it moves to **Draft** state. You can delete a forecast that is in **Draft** state.
- If you want to end a manual adjustment after it has started and before its end date, you can click **End Now**.

The forecast will no longer be used in the resource conversion formula.

When the manual adjustment is published:

- The state of the record changes to **Published**.
- The adjusted values will be used in the resource conversion formula and the demand forecast displayed on the calendar.
- Any other manual adjustment configurations that were created would be unpublished and moved to **Draft** state.

Migrate to 15-minute forecasting

Migrate to 15-minute demand forecasting that enables managers to view their agent staffing forecast at 15-minute intervals on the team calendar.

Before you begin

Role required: admin

About this task

Starting with the Tokyo release, 15-minute forecasting is the default forecasting feature. Existing customers can migrate from the 60-minute forecasting to 15-minute forecasting using the following procedure.

Procedure

1. Set the *sn_agent_forecast.forecast_interval* system property value to `15`.
   a. Set the application scope to Agent Forecast using the application picker.
   b. Enter `sys_properties.list` in the navigation filter, and then open the *sn_agent_forecast.forecast_interval* property.
   c. In the **Value** field, enter `15`.
   d. Click **Update**.
2. Deactivate the existing demo data definitions.
   a. Navigate to **All** > **Workforce Optimization** > **Demand Forecast** > **Data Collection Definitions**.
   b. Set the **Active** value of **Cases Assigned** and **Chat Interaction Created** demo definitions to **false**.
3. Create new data collection definitions, formula parameters, and group forecast configuration.

   For more info, see Configure the data collection for resources demands.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Run the *Collect historical data* on-demand job to collect historical data at 15-minute interval.
   a. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
   b. Search for *Collect historical data* and select it.
   c. Click **Execute Now**.
5. Run the *Forecast resources for future* scheduled job for staffing forecast that can be viewed on team calendar.
   a. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
   b. Search for *Forecast resources for future* and select it.
   c. Click **Execute Now**.

Setting up Work scheduler in Workforce Optimization for Customer Service

Customize an existing work scheduler card based on your need. You can also create a work configuration and work scheduler card from scratch and associate them so that managers can view the cards in their work queue.

Customize a Work Scheduler card using the Next Experience UI Builder

Customize the Work Scheduler card components, such as adding an extra field, or changing the color or order of a field, to display them in the Work scheduler queue.

Before you begin
Role required: admin, workspace_admin, or ui_builder_admin

About this task
You can duplicate an existing work item variant such as an Incident, Problem, Change Request and customize it based on your needs.

Procedure
1. Navigate to **All** > **Now Experience Framework** > **UI Builder**.
2. In the **My experiences** list, select **Manager Workspace**.
3. Select the Pages icon.
4. In the **Page** menu, select **Work scheduler**.
5. In the left pane, go to the **Content** section and navigate to **Body (Flex)** > **Work queue (Flex)** > **Sidebar**.
6. In the right pane, select the icon ( ) in the **Work item cards default** sub-page.
7. In the left pane, select **Body (Flex)** > **Viewport1**.
8. In the right pane, select the icon ( ) next to a card, for example, **Incident default**, that you want to configure.
9. To duplicate the selected variant, in the left pane, in the **Variants** section, hover over the variant you want to duplicate, select the ( ) icon and select **Duplicate**.
10. Hover over the variant you have duplicated, select the ( ) icon and select **Edit conditions**.
11. In the **Order** field, set the order to be the lowest value so that this variant will display in manager workspace.

Tip:
You can only display one variant for a work item type.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

12. Click **Save**.
13. Customize the variant you've created using any of the tasks or steps listed in Create a Work scheduler card using the Next Experience UI Builder.

Example:

If you'd like to configure this in the Work Scheduler card	Refer to
Add fields	Create page scripts for Work scheduler and refer to the Create the **Transform workItem to cardProps** page script steps.
Add an avatar	Configure an avatar component for Work scheduler

Related topics

Create a page in UI Builder

Set up a work configuration

Create a work configuration for a work item. Add filters that display key information that the manager wants to analyze. This work configuration will determine how the work items display on the Work scheduler calendar in manager workspace.

Before you begin

Role required: sn_wfo_work_sched.admin

Procedure

1. Navigate to **All** > **Work Scheduler** > **Work Configurations**.
2. Click **New**.
3. On the form, fill in the fields.

Field	Description
Name	Unique name for the work configuration.
Table	Table for which you want to create the work configuration. Case table is available by default to create work configurations.
Description field	The field from the selected table that you want to use for describing the work item.
Assigned to field	The field from the selected table that you want to use for assigning an agent to the work item.
Assignment group field	The field from the selected table that you want to use for assigning a group to the work item.
Start date field	The field from the selected table that you want to use to display the start date for the work item.
End date field	The field from the selected table that you want to use to display the end date for the work item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Default color	The preferred color to display the work item card in the manager workspace.
UX app route	The route where the card layout is defined for this work item type. The route displays in UI Builder in the list of experiences. This UX app route determines the layout of the work item card. By default, it is set to **Default card**, which displays the following fields: ○ Description field ○ Assigned to field ○ Assignment group field ○ Start date field ○ End date field If you need additional fields, you must add them in the **Extra fields** field. For information on defining a card layout, see Create a Work Scheduler card using UI Builder.
Order	The display order of the work item.
Extra fields	**Important:** If you need additional fields on the selected table that you would like to display in the work item card in the manager workspace, you must add it in this field.
Matching rule	Select a matching rule for the work configuration.

4. Right-click the form header and click **Submit**.
5. Create a work configuration filter.
   a. In the **Work Configuration filters** related list, click **New**.
   b. In the **Name** field, enter a unique name for the filter.
   c. Right-click and save the form to add the selected table.
   d. Add the desired conditions for the work configuration filter.
   For information on adding conditions, see Condition builder.
   e. Select **Update**.

Create a Work scheduler card using the Next Experience UI Builder

Create a work scheduler card and add the components that you want to display based on your needs in the Work Scheduler application in manager workspace.

Before you begin

Role required: admin, workspace_admin, or ui_builder_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Now Experience Framework** > **UI Builder**.
2. In the **My experiences** list, select **Manager Workspace**.
3. Select the Pages icon.
4. In the **Page** menu, select **Work scheduler**.
5. In the left pane, go to the **Content** section and navigate to **Body (Flex)** > **Work queue (Flex)** > **Sidebar**.
6. In the right pane, select the icon ( ) in the **Work item cards default** sub-page.
7. In the left pane, select **Body (Flex)** > **Viewport1**.
8. In the right pane, select **+Add** and enter a name for the card.
   The **Path** field is automatically populated.
9. Select **Create**.
   A new card is created.

> **Important:**
> After you create the work scheduler card, you must select the name of this card in the **UX app route** field in the work configuration you have created. For information on setting up a work configuration, see Set up a work configuration .

10. Select **Done**.
    Follow the steps listed in each of the topics below in the given sequence to customize Work scheduler.

Related topics

Create a page in UI Builder

Create a client state parameter for Work scheduler

Add custom client state parameter values to add properties to the card components.

Before you begin

Role required: admin, workspace_admin, or ui_builder_admin

Procedure

1. Select the Client state icon ( ).
2. In the Client state parameters section, click **+Add**.
3. Create the client state parameter.
   a. In the **Name** field, enter *cardProps*.
   b. From the **Type** menu, select *JSON*.
   c. In the **Initial value** field, select **Edit**.
   d. In the **Initial value** pop-up screen, enter the following code:

```
{
    "tagline": {},
    "heading": {},
    "dropdowns": [],
    "content": [],
    "assignedTo": null,
```

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    "aria": {}
  }
```

e. Select **Apply**.

Here's a demo on how to create client state parameters. Create client state parameters

What to do next

Create page scripts for Work scheduler

Related topics

Create and bind a client state parameter to a component

Create page scripts for Work scheduler

Add custom page scripts for the Work scheduler so that you can update the client state through events or update transform workItem object to properties.

Before you begin

Role required: admin, workspace_admin, or ui_builder_admin

About this task

Add the *Handle card clicked* and the *Handle card action clicked* page scripts to handle events that are generated when the card and its actions are clicked.

Add the *Transform workItem to cardProps* page script to transform the *workItem* object in the Work queue to properties for the card components.

Note:
If you have customized a Work scheduler card, you can follow the steps below to add client scripts.

Procedure

1. Select the Client Scripts icon (</>).
2. Create the *Handle card clicked* page script.
   a. In the **Page scripts** section, click **+Add**.
   b. In the **Script name** field, enter *Handle card clicked*.
   c. In the **Script Includes** section, add the following script:

```
/**
* @param {params} params
* @param {api} params.api
* @param {any} params.event
* @param {any} params.imports
* @param {ApiHelpers} params.helpers
*/
function handler({api, event, helpers, imports}) {
  const {workItem} = api.context.props;
  api.emit('CARD_CLICKED', {workItem});
}
```

3. Create the *Handle card action clicked* page script.
   a. In the **Page scripts** section, click **+Add**.
   b. In the **Script name** field, enter *Handle card action clicked*.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. In the **Script Includes** section, add the following script:

```
/**
* @param {params} params
* @param {api} params.api
* @param {any} params.event
* @param {any} params.imports
* @param {ApiHelpers} params.helpers
*/
function handler({api, event, helpers, imports}) {
  const {workItem} = api.context.props;
  const {action: actionItem} = event.payload;
  api.emit('CARD_ACTION_CLICKED', {workItem, actionItem});
}
```

4. Create the **Transform workItem to cardProps** page script and attach the *WorkSchedulerUIBCardUtils* script include.

   a. In the **Page scripts** section, click **+Add**.

   b. In the **Script name** field, enter *Transform workItem to cardProp*.

   c. In the script editor, add the following script:

```
/**
* @param {params} params
* @param {api} params.api
* @param {any} params.event
* @param {any} params.imports
* @param {ApiHelpers} params.helpers
*/
async function handler({api, event, helpers, imports}) {
    const {workItem} = api.context.props;
    const {mappingFields, recordFields} = workItem;
    const cardUtils =
 imports['sn_wfo_work_sched.WorkSchedulerUIBCardUtils']();
    const fallbackValueLabel = await helpers.translate('<not
 defined>');
    const dropdownItems = workItem.tableMetadata.canDelete
        ? [{id: 'delete', label: await
 helpers.translate('Delete')}]
        : [];
    // Fields for getContent() and getAria()
    const contentFields = [{
        name: 'assigned_to',
        label: await helpers.translate('Assigned to')
    },
    {
        name: 'assignment_group',
        label: await helpers.translate('Assignment group')
    },
    {
        name: 'start_date',
        label: await helpers.translate('Start date')
    },
    {
        name: 'end_date',
        label: await helpers.translate('End date')
    }];
```

```
    // Create cardProps
    const cardProps = {};
    cardProps.tagline = {
        label: workItem.recordFields._row_data.displayValue
|| null
    };
    cardProps.heading = {
        label: mappingFields.description ?
mappingFields.description.displayValue : fallbackValueLabel
    };
    cardProps.dropdowns = dropdownItems.length > 0
        ? [{id: 'dropdown1', items: dropdownItems, icon:
'ellipsis-v-outline'}]
        : [];
    cardProps.content = await cardUtils.getContent(helpers,
contentFields, workItem, null, null, true);
    cardProps.aria = await cardUtils.getAria(helpers,
contentFields, workItem, null, true);
    cardProps.assignedTo = mappingFields.assigned_to ?
mappingFields.assigned_to.displayValue : null;
    api.setState('cardProps', cardProps);
}
```

Create extension points for Work scheduler

Create extension points to customize your implementation in Work scheduler. For example, if you want your team members to work on an on-site task, you can configure the location of your team members to the work items assigned to them so that they can get to the tasks quickly.

Before you begin

Role required: admin

You must set the application scope to Work scheduler (sn_wfo_work_sched).

About this task

The *WorkItemSkillsRecommendationManager* extension point is available by default.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Open the *sn_wfo_work_sched.WorkItemRecommendationManager* extension point.
3. In the Related Links section, select **Create Implementation**.
4. Define the functions based on your needs to customize your implementation.

Using Workforce Optimization for Customer Service

Enhance the quality and efficiency of your teams using channel management capabilities, smart scheduling, team structure, and real-time refreshing single scores. Monitor chat conversations and help agents on cases. Assess the quality of tasks completed, recommend skills for agents, and train them to address skill gaps.

Channel Management in Workforce Optimization for Customer Service

Use Channel Management to keep a track of the real-time performance of work done by your team members through channels and queues views. You can also drill down into specific cases and chats and collaborate with your team members to achieve better results.

Using Channel Management in Workforce Optimization for Customer Service

Route work items to assigned groups using channels. Use skill-based routing to ensure that the right work goes to the right agent. Review real-time performance as your team is actively working on tasks across channels. When you see escalations, you can help your agents resolve issues without the requester being aware of it.

Monitor ongoing work and track your agents' performance of your direct reporting teams and teams that you manage additionally. Work items are allocated to qualified agents using work item queues, routing conditions, and assignment criteria that you define.

Review real-time performance as your team is actively working on tasks across channels in the following sections.

- The **Overview** section displays the most important key performance indicators (KPIs) for each of the service channels in the form of cards. The KPIs appear as per the configuration order in the service channels. The KPI scores are real-time information and automatically refreshed at a regular interval of 5 seconds or as configured in the *sn_channel_mgmt.kpi_auto_refresh.interval.seconds* system property. Also, the service channel cards refreshes automatically in 2 minutes as configured in the *sn_channel_mgmt.channel_card_auto_refresh.interval.seconds* system property or you can manually refresh by clicking the Refresh ( ) icon.
- **Assignment Group** refines reports on all pages of channels and queues as per the groups selected. Interactive filter based on the assignment group configuration, you can select the assignment group on which you want to refine the data directly from the dashboard. You can disable the **Assignment Group** interactive filter using the *sn_channel_mgmt.filter_config.enable* system property.
- The **Queued Work** tab displays the active work interactions being done within each service channel and queues.
- The **All Queues** tab displays the list of work items from queue-based routing. You can drill into specific queues and see the active interactions, work items and agents. Track real-time performance of your teams using key performance indicator reports in service channels and queues. Respond to incoming support requests by changing queues as per the priorities.
- The **All Agents** tab displays your agents' ongoing work, presence statuses, channels, work load, and open capacity. You can drill into specific agents to view the agent's profile, on-going tasks, presence state's history, and override channel capacity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- All lists display the real-time information and are automatically refreshed at a regular interval of 30 seconds or as set in the *sn_channel_mgmt.list_auto_refresh.interval.seconds* system property. You can also refresh the service channel cards manually by clicking the Refresh ( ) icon.
- The **All Queues** and **All Agents** lists offer a default sorting and filtering mechanism that lets you to view the records of the selected fields based on a default sort order. Click a column heading to toggle between ascending and descending order. The sorting order turns to the default configuration as you leave the page. Administrator can customize the default sort order by creating an implementation using the extension points. For more information, see Use extension points to configure the sort order.
- You will also receive an email notification of your agents' work summary at the end of each day if a scheduled report is configured.

Assist agents by joining their chat conversations with their end users

Assist agents in real time by joining their chat conversation and collaborate on any record by connecting with the right people instantly to achieve faster resolution.

Before you begin

Role required: sn_csm_wfo_workspa.manager

About this task

View the work-in-progress chat interactions and see if any of the agents has set the **Help Requested** flag as **Yes**. You can then open the interaction record and view all messages exchanged between the end user and agent, gain the context and choose to join the conversation by either sending private messages or joining the conversation in public.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Do one of the following:
   - Click the **Help Requested** indicator's score on the landing page.
   - Click the Channels ( ) icon, select a queue and then click the **Active Interactions** tab.
   - In the **Lists** page, click **Conversation Monitoring** > **Help Requested**.
3. Click the interaction record for which you want to join the conversation.
4. Click **Join Conversation** to start an interaction with the agent or click **Send Private Message** to send a private message only to the agent.

Result

A chat conversation is established.

Track and analyze the queue health

Monitor your agents' workload and the status of their work items against each service channel and queue so that you can get an idea of how efficiently work is moving through the queue and to your agents.

Before you begin

Role required: sn_csm_wfo_workspa.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Track the real-time performance of each queue within your service channels. You can drill into specific queues so that you can see the real-time reports, waiting work items, available agents, and status of the on-going work. This information can give you an idea of how efficiently work moves through the queue and to your agents. With this information, you can determine which queues are doing well and which queues could use a few more agents on board. For example, if you see lots of agents and not much work, you can recommend skills for your agents for other queues.

Note:

- The records in the list appear based on the column's default sort order. Click a column heading to toggle between ascending and descending order. The sorting order turns to the default configuration as you leave the page. For example, the **Available agents** column is by default in descending sort order. The administrator can change it to ascending order by creating an implementation using the *sn_channel_mgmt.ChannelMgmtExtensionPoint* extension point. For more information, see Use extension points to configure the sort order.
- The records in the list refresh at a regular interval of 30 seconds. The administrator can change the interval using the *sn_channel_mgmt.list_auto_refresh.interval.seconds* property.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Channels ( ) icon.
3. Click the **All Queues** tab.

Records for tracking agents' workload and status

Field	Description
Name	Queue name that was used to assign and route the work to the agent. Click to view the work items and agents that are associated with the queue.
Service Channel	Service channel name to which the queue is categorized. Click to view the work items and agents that are associated with the channel.
Waiting work items	Number of waiting work items in the queue.
Average wait time	Average amount of time that the work items are waiting for an agent.
Available agents	Number of available agents.
Agents not available	Number of non-available agents.
Work items assigned today	Number of work items that were assigned on a particular day.
Work items canceled today	Number of work items that were canceled on a particular day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Average Agent Utilization	Agent workload/capacity in percentage. The percentage is calculated from the **Total Capacity** and **Total Capacity in Use**.
Service Level	Number of work items that were accepted faster than the Queue's Target Wait Time.

Allocate work items manually to agents

Allocate pending work items to agents to complete the work.

Before you begin

Role required: sn_csm_wfo_workspa.manager

Ensure that the agent has the relevant skills, availability, and access to at least one queue in the service channel.

About this task

The active work items remain in the queue and are pending manual allocation for one of the following reasons:

- The agent has already reached the maximum capacity.
- Available agents have not accepted the allocated work items.
- Agents with required skills are not available.

Procedure

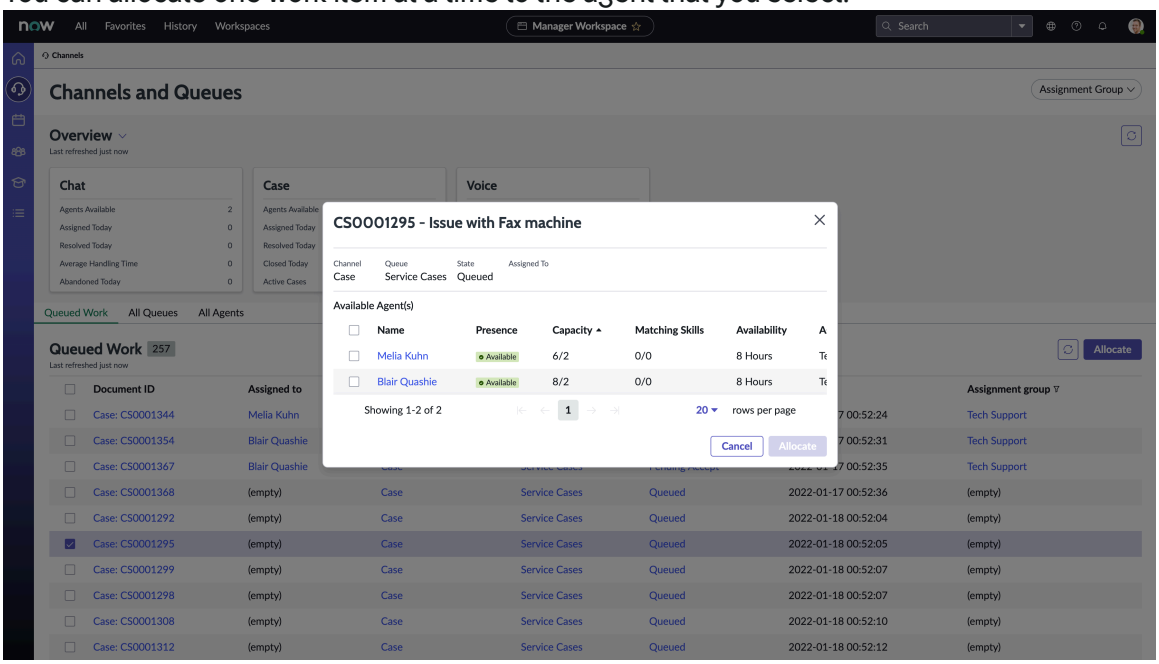
1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Channels ( ) icon.
3. Select the work item using one of the following actions.
   The list of available agents appears with details such as presence state, availability, capacity, assignment groups (common groups between manager and agents), and matching skills.

   Note:
   The availability hours are the current shift timings of an agent, excluding the break time. However, if the shift hasn't started, then the next shift available hours are displayed.

4. Select the agent that you want to assign the work item to.
   For example, if the capacity is 0/4, it means that the agent's maximum capacity is four work items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can allocate one work item at a time to the agent that you select.



5. Click **Allocate**.
   A confirmation message appears that shows that the work item is allocated to the selected agent. You can customize the confirmation message by adding the [glide.awa.manual_assignment_message] system property to the sys_properties.list [sys_properties] table. The agent gets an alert on the assigned work item as follows:
   - If the agent accepts the work item, the status changes from **Pending Accept** to the **Accepted** state. The **Assigned To** field is updated with the agent's name and the relevant KPI is updated.
   - If the agent rejects the work item, the status changes to the **Queued** state.
   - If the agent does not accept the work item for a long time, the status remains in the **Pending Accept** state. You then need to reallocate the work item.

Track and analyze agents' performance

Track your agent's performance in overview so that you can analyze and review how that agent is doing.

Before you begin
Role required: sn_csm_wfo_workspa.manager

About this task
View all agents and their real-time status. Drill down into a specific agent to view the following details.

- Real-time information of KPIs such as active cases, interactions, and other rejections.
- Override channel capacity.
- Agents' availability and their presence states' history.
- Work items which are in **Pending Accept** state.
- Interactions that are new, work in progress, and on hold states.
- Cases that are in new, open, and awaiting info states.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Skill set, schedule, and profile.
- Assigned training tasks.
- User details and groups assigned.

Note:

- The records in the list appear based on the column's default sort order. Click a column heading to toggle between ascending and descending order. The sorting order turns to the default configuration as you leave the page. For example, the agent's **Presence State** column is by default in ascending sort order. The administrator can change it to descending order by creating an implementation using the *sn_channel_mgmt.ChannelMgmtExtensionPoint* extension point. For more information, see Use extension points to configure the sort order.
- The records in the list refresh at a regular interval of 30 seconds. The administrator can change the interval using the *sn_channel_mgmt.list_auto_refresh.interval.seconds* system property.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Channels ( ) icon.
3. Click the **All Agents** tab.
4. Track and analyze agents' performance.

Field	Description
Agent	First and last name of the agent. Click the agent's name to view the agent's profile summary.
Service Channel	Agent's associated service channel, so you know what type of work the available agent can handle. Click the channel to view the list of work items.
Total Capacity	Number of maximum work items that can be automatically assigned to agents (pending overrides). ○ Chat: The default is 4. ○ Incident: The default is 2.
Capacity in use	Number of ongoing work items. Click the score to view the ongoing work of an agent.
Utilization	Agent workload/capacity in percentage. The percentage is calculated from the **Total Capacity** and **Capacity in Use**.
Presence State	Agent's current presence status. For example, Online or Offline.
Can Take Work	Agent's status to accept the work item.
Time in State	Amount of time the agent has been in the current presence status.

5. Select an agent to drill down to view the details.
   Agent profile page appears. The **Current Work** displays the data of the configured key performance indicators (KPIs). For more information, see Configure KPIs for agents.

© 2026 ServiceNow, Inc. All rights reserved.

Override channel capacity for an agent

Change the default number of work items that an agent can handle for a service channel.

Before you begin

Role required: sn_csm_wfo_workspa.manager

About this task

By default, the override capacity is valid for 12 hours. Administrator can change the duration using the *sn_channel_mgmt.awa_agent_temporary_override_time.minutes* system property. The capacity resets to the previous value after the specified time. The scheduled job Reset Temporary Capacity Override is executed every two minutes to check the invalid or expired overridden capacity and resets to the previous value. You can override the channel capacity for a single agent at a time. Ensure that an agent to whom you want to override the channel capacity needs to be associated with Advanced Work Assignment and the required channels.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Navigate to an agent's profile page.
   The agent profile page appears.
3. Click the **Overview** tab.
4. In the **Channels** section, select the service channel for which you want to override the capacity.
5. Click **Capacity Override**.
   The **Agent Capacity Override** page appears.
6. In the **Override Capacity** field, enter the new capacity.
7. Click **Apply**.

Result

The following snapshot shows an example of an agent' capacity override. A message appears indicating the capacity update is valid for the defined duration. The capacity resets to the previous value after the specified time.

Using Voice with Workforce Optimization for Customer Service

Use Voice to deflect cases away from your human agents using bots. You can record phone interactions when agents resolve issues. Also, you can monitor those interactions to evaluate and improve the quality of case resolutions.

With the Voice application, you can:

- Enable your workforce to work using the voice channel and get call recordings, call transcripts, and reports of sentiment analysis when agents interact with callers. You can visualize all of this information within the Channel Management application in Workforce Optimization for Customer Service.
- Analyze the call transcripts and sentiments of users after an interaction is complete so that you can create assessments, provide feedback, and training for agents.
- Synchronize agent presence within the queue.
- View the Amazon Connect channel on Channel Management. You can view the performance metrics and reports of the agents using the voice channel. To access the reports, your application administrator must install Amazon Connect Spoke.

  Note:
  The following reports on the Amazon Connect channel are chargeable:
  - Contacts in ACW State
  - Oldest Contact Age
  - Average Abandon Time

  These reports are collected from Amazon Connect using `GetMetricData` and `GetCurrentMetricData` APIs. For more information on the prices of these reports, see Amazon CloudWatch Pricing.

Note:
You can integrate any third-party telephony service with the ServiceNowVoice application. By default, ServiceNowVoice provides you with the ability to integrate with the Amazon Connect application.

You can visualise the metrics from the Amazon Connect phone queues that are routed through Voice using the Channel Management application in Workforce Optimization for Customer Service. The Voice application uses Advanced Work Assignment to report data from the Amazon Connect queues.

Benefits of using Voice with Workforce Optimization for Customer Service

As a manager, you can:

- Monitor your agent's calls as they resolve customer issues.
- View synchronized agent presence states within the Channel Management application in Workforce Optimization for Customer Service.
- Assess your agents by reviewing recordings of agent interaction and call transcripts.
- Analyze sentiments from the call transcripts and use that to coach and train your agents.

As an agent, you can:

- Get information about the caller before you answer an incoming call.
- Analyze call transcripts and listen to recordings after you complete an interaction.
- Place outbound calls using automated outbound dialing.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Associate Amazon Connect queues for CSM to a ServiceNow instance

Set up phone queues for Amazon Connect to gain visibility into the queues using Workforce Optimization for Customer Service.

Before you begin

Enable the Advanced Work Assignment plugin (com.glide.awa) to create the Amazon Connect queues. You must activate this plugin before you activate the Cloud Call Center Core (sn_cti_core) plugin so that you can successfully integrate the two applications.

After you Install ServiceNow Voice applications, when you enable the Advanced Work Assignment plugin (com.glide.awa), the Amazon Connect (phone) service channel appears in the Workforce Optimization for Customer Service.

Role required: sn_csm_wfo_workspa.admin and sn_cti_amzn_cct.admin

About this task

After an agent completes a call, using Workforce Optimization for Customer Service, you can learn:

- Who was on hold and how long they were on hold
- How long calls are taking
- Which agents are available and when
- How many agents are available and what is their current utilization

You can see the Basic queue when you install the demo data with the sample contact flow:

Amazon Connect Phone Queues

Calls get routed to this queue	When
Basic Queue	An utterance is generic, such as, "I want to talk to an agent."
VIP Queue	A user who has the VIP field enabled calls Support.
IT Equipment Support	An utterance includes IT equipment support or hardware issues.
Application Support	An utterance includes application support.

For example, the Basic queue is available when you install the demo data to get the calls routed to this queue when an utterance is generic, such as, "I want to talk to an agent".

A routing profile links queues to agents. Every agent must have a routing profile in the Amazon Connect instance that is integrated with the ServiceNow instance. For more information, see create a routing profile.

Note:

- You can associate each profile with multiple Amazon Connect agent queues.
- You must associate each of these agent queues with the corresponding agent queue in your ServiceNow instance using an Amazon Connect ARN number. This association enables you to report on queue statistics and call metrics within Workforce Optimization for Customer Service.

Procedure

1. Create placeholder queues for an Amazon Connect (phone) service channel if you need additional queues.
   For more information on creating the queue, refer to Create a work item queue.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Do not add work item routing conditions when you create the placeholder queues.

2. Associate the ServiceNow Advanced Work Assignment (AWA) queue record with the Amazon Web Services (AWS) queue ARN.
   a. In the Amazon Connect instance, navigate to **Routing** > **Queues**.
   b. Select a queue.
   c. Copy the ARN for the queue.
   d. In the ServiceNow instance, navigate to **Advanced Work Assignment** > **Queues** and select the corresponding queue.
   e. In the **Cloud Call Center Source ID** field, enter the ARN number.
   f. Click **Update**.
   g. Repeat these steps for each queue.
3. Add assignment groups to a queue.
   a. Select a work item queue.
   b. Click **Group Queue Priorities** related list.

      Note:
      You must configure the form to display this related list.

   c. Click **New**.
   d. In the **Group** field, add an assignment group that include agents who can handle this queue.
   e. In the **Order** field, select the order number for the assignment group. This is the order of assignment group priority in which the incoming calls are handled.
   f. Click **Submit**.

Listen in to an agent call

Monitor your customer service agents' calls when they are resolving issues for external callers by using Workforce Optimization for Customer Service.

Before you begin

Role required: sn_csm_wfo_workspa.manager

You must also have an active session with Amazon Connect and be able to monitor live conversations. For more information, refer to Monitor live conversations

About this task

When the Amazon Connect application answers a call from an external source, an interaction record is created.

Procedure

1. Monitor your agent's call queue when an agent is talking to an external caller in Workforce Optimization for Customer Service.
2. Open the active interaction when the phone call is in progress.
3. Click **Monitor Call** and listen into the call in Amazon Connect.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Analyze transcripts and sentiments for the Amazon Connect phone channel

Analyze your agent's call recordings, transcripts, and sentiment reports. With this information, you can assess the call quality and train your agents to handle calls better in the future.

Before you begin
Role required: sn_cti_core.user_manager

About this task
When an agent interacts with an external caller, the call gets recorded and transcribed. The application tags every statement within a transcript with a sentiment score. After a call has been completed, a sentiment report is automatically generated.

Note:
The manager must have an active session with Amazon Connect to view the transcripts and sentiments. The transcripts and sentiments are generated in the Amazon Connect application. They are then displayed in the Channels application in Workforce Optimization for Customer Service.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select an interaction record to analyze transcripts and sentiments.
3. Click **Call Analysis**.
   The Amazon Connect application generates the interactions and sentiment analysis of those interactions and displays them as a report in Workforce Optimization for Customer Service.
4. **Optional:** Analyze transcripts and sentiments for the Amazon Connect phone channel and assign training to coach the agents.

Analyze skills for your teams in Workforce Optimization for Customer Service

Add skills to groups and view skill assignments for your teams.

Before you begin
Role required: skill_admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Teams icon ( ).
3. Select a team for which you want to analyze skills.
4. Add a skill to the team.
   a. In the **Skills** tab, click **New**.
   b. Select a skill in the **Skill** field.
   c. In the **Skill level** field, select a level for the selected skill.
   d. In the **Inherited from** field, select the skill from which this skill is inherited.
   e. Click **Save**.
   You can click on a skill to analyze skill data such as the number of users or tasks with that skill, the overall skill coverage, and how many experts you currently have with that skill.

© 2026 ServiceNow, Inc. All rights reserved.

Assigning work using Work Scheduler in Workforce Optimization for Customer Service

Manage your teams' work assignments easily by customizing your work queue to display the most relevant work items.

Gain insights into which agents have been recommended to work on a task based on the mandatory and optional skills they have.

Assign work based on your teams' skills and capacity

Plan your teams' work and assign work items such as incidents, problems, change requests, or interactions to them based on their skills, availability, and capacity. View your teams' shifts, events, and work assignments and assign or reassign the work items from a central location.

Before you begin

Note:
Your administrator must add sys ids for event categories that you want to display in the calendar to the *sn_wfo_work_sched.shift_data_categories* system property. For more information, see Work Scheduler components in Workforce Optimization for Customer Service reference.

Role required: sn_wfo_work_sched.manager

About this task

Analyze the tasks that your agents are assigned to and their actual shift plans. If the agent doesn't work during the duration the task has to be completed, you can reassign the task based on agent availability.

Note:

- Each type of task is displayed in the color defined in the queue configuration.
- You can enter keywords in the **Search** field in the sidebar to search a card.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the **Work Scheduler** icon.
   - You can view the work shifts of all of your agents for all teams you manage. When you select the shift, the pop-up displays the shift details such as the shift time span and agent break times.
   - In the contextual side panel, select the Filter icon ( ) and then select any filter, add the desired criteria, and select **Apply** to narrow down the display of the team members in the calendar. You can filter based on your team's assignment group, skills, location, schedule plan, or shift plan.
3. **Optional:** If you don't have any queue configurations in the Work scheduler, select the queue settings icon ( ) and then enable up to five work item types.
   The application creates a queue configuration and corresponding filters for each enabled work item type.
4. **Optional:** Create a queue configuration.
   a. Select **Queue configurations**.
   b. In the **My queue configurations** list, select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the form, fill in the fields.

Name	Description
Name	Name for the queue configuration.
Work configuration	The type of work configuration you want to use for the queue configuration.
Color	The work item color that displays in the calendar.
Order	The order number in which you want the queue configuration displayed in Work scheduler.
Matching rule	The matching rule for the work item type.

d. Select **Save**.

5. Analyze your teams' work and schedule.

a. From the **Queue** menu, select a work item to view related tasks.

For example, if you select **Unassigned Incidents**, you can see all tasks related to the Unassigned Incident queue.

You can select a time zone to view the agent schedule in that time zone.

b. Analyze the tasks and work shifts for each agent in the calendar.
You can use the pagination to scroll through the work shifts.

6. Assign a work item to an agent.

a. Select a task that you want to assign to an agent.

When you enable the **Show suggested only** option, by default, you can choose to display team members based on their availability, skills, or time zone. The ranking of the team members are based on matching assignment rules set for each criteria. Work scheduler uses Assignment workbench to evaluate agents to work on tasks.

You can select one or more of these criteria and the ranking of the team members will be based on the selected criteria:

- **WFO - Availability**—The number of hours the team member is available.
- **WFO - Mandatory skills**— If the task has mandatory and optional skills associated with it, the work scheduler displays agents who have all of the mandatory skills first and then the agents who have the optional skills.
- **WFO - Optional skills**— If the task only has optional skills associated with it, then the list displays the agents with the optional skills.
- **WFO- Timezone overlap**—The delta between the task time zone and the user's time zone. For example, if the user is located in the Pacific time zone and if the task location is in the Eastern time zone, then it will display as **+3**; if the task location is Hawaii, then it will display as **-3**.

To add your own matching rule, see Create a criteria for a matching rule in Work scheduler.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

All of these criteria are based on the **More is better** ranking method where a higher value is better. For example, when the WFO-Mandatory skills criteria is enabled, team members that have more skills that are mandatory to work on the work item will be ranked higher.

For each criteria, if there is 100% match, then the values are displayed in green color; if not, the values are displayed in yellow color. If all criteria match a 100% then the matching details are displayed in green color; if not, they're displayed in yellow color.

b. Select an agent from the work scheduler calendar to whom you want to assign the task.

c. Click and drag your mouse device for the time span on the calendar for which you want the agent to work on the task.
The task is assigned to that agent. You can also edit the duration of the time span or drag the time span and reassign the task to another agent.

Note:
From the work queue, when you select a task that has been assigned to an agent, the application auto-scrolls to the page that has the time span for the task and displays the schedule for the agent.

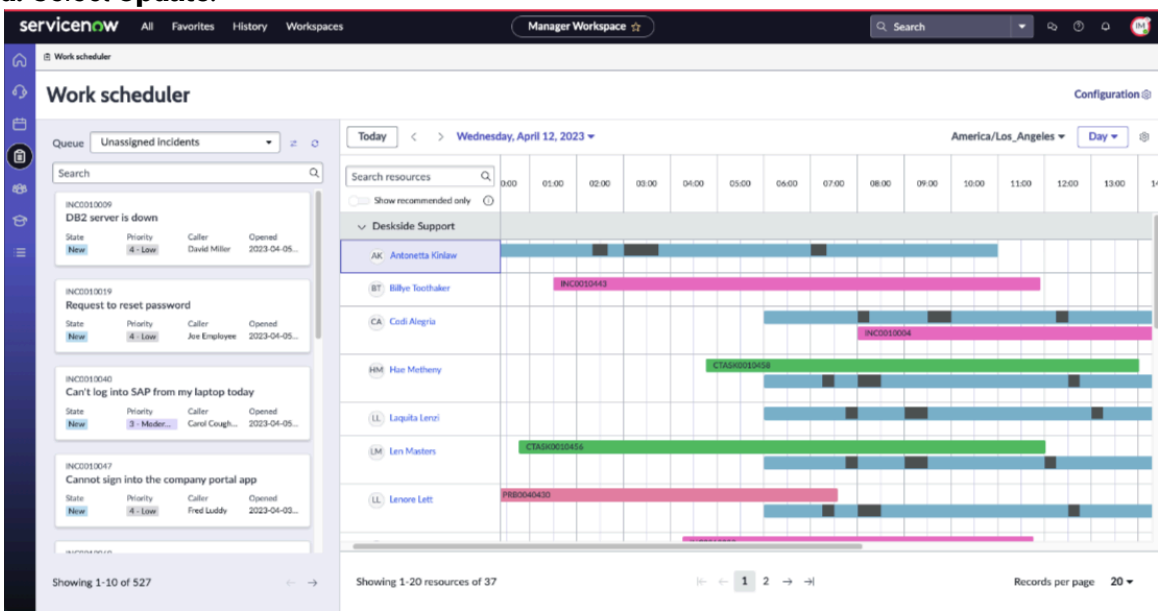
7. Optional: Update a work item from the calendar.

a. Select a desired task on the calendar that you want to update.

b. Select the Edit icon to access a work item record.

c. On the form, make the necessary updates.

d. Select **Update**.



Create a criteria for a matching rule in Work scheduler

Add a criteria for a matching rule to enable assignment of work items to team members based on the rule.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The following matching rules, which are available by default, are based on the selection criteria matching type:

Rule name	Work configuration name	Table	UX app route
Incident Matching rule	Incidents	Incident [incident]	Incident
Problem Matching rule	Problems	Problem [problem]	Problem
Requested item Matching rule	Requested items	Requested Item [sc_req_item]	Requested item
Request Matching rule	Requests	Request [sc_request]	Request
Catalog Task Matching rule	Catalog Task	Catalog Task [sc_task]	Catalog task
Change Request Matching rule	Change Request	Change Request [change_request]	Change requests
Change Task Matching rule	Change Task	Change Task [change_task]	Change task

For information on how matching criteria works, see Matching criteria for work items in Work scheduler.

The following four criteria are available by default:

- WFO-Mandatory skills
- WFO-Availability
- WFO-Optional skills
- WFO-Timezone overlap

Procedure

1. Navigate to **All** > **Work scheduler** > **Matching Rules**.
2. In the Matching Rules list, select a matching rule; for example, the **Incident matching rule**.
3. In the Select Criteria related list, select **New.**
4. Fill in the fields on the form.
   For information on creating a new matching criteria, see Create assignment workbench matching criteria.
5. Select **Submit**.

Matching criteria for work items in Work scheduler

The assignment workbench uses configurable matching criteria, such as skills and availability, to evaluate the agents in a selected group and provide an overall ranking.

There are three types of matching criteria:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Simple Match**: creates one-to-one matching, such as matching the time zone of an agent with the time zone of a task location.
- **Aggregate**: uses a simple query and returns an aggregate result. For an aggregate type, select a table and create a filter, and then select an aggregate field such as the **Assigned to** field. This type of query returns a set of users.
- **Scripted**: uses a scripted query which returns a list of users.

Several matching criteria are provided with the assignment workbench:

- **Availability Today**: Availability is calculated based on the agent's work schedule, assigned work, and personal time off. The more availability an agent has, the higher the contribution to the agent's overall rank.
- **Matching Skills**: The number of agent skills that match the skills required for the incident. The more skills that match, the higher the contribution to the agent's overall rank.
- **Matching Skills - Mandatory Skills Support** Calculates the number of agent skills that match the mandatory skills. It does this by filtering out all agents who do not have the mandatory skills and ranks the remaining agents. The more skills that match, the higher the contribution to the agent's overall rank.

  Note:
  If using the mandatory skills feature, use the **Matching Skills - Mandatory Skills Support** criterion to match agents with the Configuring Mandatory Skills identified for an incident.

- **Assigned Incidents**: The number of incidents already assigned to this agent. The more incidents assigned, the lower the contribution to the agent's overall rank.
- **Last Assigned**: For the sake of balancing assigned work, prioritized the agent based on the last assigned work.

To create matching criteria, select the type and use the fields related to that type to build the query. After creating matching criteria, you can create a configuration for the assignment workbench by creating a matching rule of the type **Selection criteria** and selecting the desired matching criteria.

As part of selecting the matching criteria for the workbench configuration, you can specify the following settings for each individual criterion:

- ranking and display usage
- ranking method
- ranking weight
- threshold
- active/inactive

Ranking and display usage

In the **Use for** field, specify how you want that matching criterion to be used:

- Ranking and display: uses the criterion to determine agent ranking and displays it in a column on the workbench.
- Display only: displays the criterion in a column on the workbench but does not use it to determine agent ranking.
- Ranking only: uses the criterion to determine agent ranking but does not display it on the workbench.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ranking method

There are two ranking methods:

- More is better: for example, more availability is better when determining the agent ranking.
- Less is better: for example, fewer assigned incidents are better when determining agent ranking.

Weight

Each matching criterion has an assigned weight. By default, the matching criteria has an assigned weight of 10. You can assign a higher weight to the criteria that's more important.

Threshold

A threshold sets a minimum requirement for a criterion. For example, set the threshold of the Matching Skills criterion to 3 if you want to see only those agents who have at least three of the required skills for a task. For availability, set the threshold to the desired number of hours to display only those agents who have that minimum number of work hours available. You can set the threshold in the **Select Criteria** related list on the Matching Rule form. If necessary, personalize the list and add the **Threshold** column.

Active/Inactive

There can be several matching criteria associated with the matching rule that determines the assignment workbench configuration. Each individual criterion can be set to active or inactive. Changing this setting has an immediate impact on the agent ranking. You can make this change in the **Select Criteria** related list on the Matching Rule form. If necessary, personalize the list and add the **Active** column.

Calculating the agent ranking

The assignment workbench adds the values of the matching criteria and their respective weights and uses these values to determine the overall agent ranking.

1. Calculate a number for each criterion.
2. Multiply that number by the criterion weight.
3. Divide the result by the total of all criterion.
4. Repeat for each criterion and add the results.

The following example shows how the ranking is determined for an agent with these matching criteria values:

- Matching Skills with Mandatory Skills Support: 5/6
- Availability Today: 7 hours
- Assigned Incidents: 2

Calculations:

- **Matching Skills**: `2 / 3 = 0.666` (with 3 being the maximum number of skills)
- **Availability Today**: `7 / 8 = 0.875` (with 8 being the maximum number of hours)
- **Assigned Incidents**: `2 / 26 = 0.0769` (with 26 being the total number of tasks in the table)
- **Weight**: each matching criteria has an equal weight of 10

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
((0.666 x 10) / Total of criterion weight (10+10+10)) + ((0.875
 x 10) / Total of criterion weight (10+10+10)) + ((0.0769 x
 10) / Total of criterion weight (10+10+10))
```

```
(6.66 / 30) + (8.75 / 30) + (0.769 / 30)
```

```
0.222 + 0.291 + 0.0256 = 0.53
```

This calculation is performed for each agent in the assignment group. Agents are ranked based on the value of this calculation, with the highest number earning the highest ranking.

Scheduling in Workforce Optimization for Customer Service

By using Scheduling, you can manage your workforce resources efficiently by planning and managing schedules, staffing, and shifts across your teams all from one location. You can also integrate with on-call scheduling and create shifts and schedule for on-call rotations.

With Scheduling, you can do the following:

- Add meetings, training, time-off requests, or ad hoc work shifts by using the team calendar.
- Filter agents in the team calendar based on their location, region, assignment groups, or any field in the agent's record.
- Create shift and schedule plans for agents.
- Approve or reject agents' time-off and shift-swap requests.
- Track and manage the team's schedule on the team calendar by viewing the planned shifts versus the actual clock-in and clock-out times for the selected day, week or month.
- Analyze whether your team members are following the schedules. If you see a potential issue, you can easily alert your team so that they can take immediate action.
- Use historical adherence reports to analyze and recommend coaching opportunities for your agents.

To delve into more information behind your key performance indicators, filters and sidebars, see Exploring indicators with KPI Details

Create a shift plan

Schedule shifts for your team so that you can make sure that you are covering all work assignments and breaks. You can also specify the days of the week that you might need to override scheduled shifts.

Before you begin

Role required: sn_shift_planning.admin

About this task

In the **Shifts** tab, the shifts are grouped by active and inactive shifts. The contextual side panel displays the active and then the inactive shifts in the order it is displayed in the **Shifts** tab.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click the **Shifts** tab.
4. Click the plus (+) icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Create a shift.

6. Click **Submit**.

Create a schedule plan

Manage your team's schedule by creating a schedule plan that covers a span of time and includes your team's work shifts. You can also assign agents to shifts based on their skills and availability. This way, you can make sure that you are using your resources in the best way possible for your organization.

Before you begin
Role required: sn_shift_planning.admin

About this task
You can set the number of days to cache agent schedules using the *sn_shift_planning.number_of_days_to_cache* system property. The **Total coverage/demand** row displays the number of agents covering each shift in a day. The day view displays the demand for the number of agents forecast for every hour in a day. For example, 4/5 shows that you have four agents scheduled for an hourly time slot, 11 AM to 12 PM and the agent demand forecast for that hour is 5.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Create a schedule plan.
   a. Click the **Team Calendar** tab.

      Note:
      You can analyze the staff alignment for a day, week, or month.

   b. In the contextual side panel, click the show schedules icon to display the schedules.
   c. In the Schedules panel, click + icon.
   d. In the **Name** field, enter a name for the schedule plan.
   e. From the **Start Date** field, select a date to start the schedule plan and click **OK**.
   f. From the **End Date** field, select a date to end the schedule plan and click **OK**.
   g. Click **Save schedule**.
   You can view the schedule of all agents in the assignment group that you directly or additionally manage.
4. Add a work shift to the schedule plan.

   Note:
   To add more shifts to an existing schedule plan, select the schedule plan and then add the work shift.

   a. In the contextual side panel, click **Add Shift**.
   b. In the **Shift** field, select the work shift that you want to add to the schedule plan.
   c. In the **Event type** field, select the work event that categorizes the work shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Add agents to the work shift.
   a. In the **Agents** field, search for agents and add one or more agents to add to the shift.
   b. Click **Save**.

> **Note:**
> It may take a few minutes for the screen to refresh.

Result
The schedule plan is created in Draft state.

What to do next
Publish a schedule plan for visibility into team coverage.

Publish a schedule plan for visibility into team coverage

Generate a preview of your schedule plan and publish it so that your agents can see their shifts and schedules ahead of time. You can unpublish a schedule to make changes and then publish it again.

Before you begin
Role required: sn_shift_planning.admin

About this task
You can make a copy of a schedule and update it to create a new schedule. Updates could include modifying the schedule start and end dates as well as adding or removing shifts or agents.
When you make a copy of the schedule, the following updates are automatically made to the schedule copy:

- The start date is set to the current date and the end date to 30 days from the current date.
- The schedule state changes to **Draft**. You can make the necessary changes to the shift and select **Save**.
- The schedule only displays agents in the assignment group of the current logged in user.

You can also unpublish a schedule make updates, and then publish it again.

- If the start date is the either the current date or had occurred in the past, the schedule state remains as **Published** and the end date changes to tomorrow.
- If the start date is in the future, the scheduler changes the schedule state and agent schedules to **Draft**.

Procedure
1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the Schedule icon ( ).
3. Generate a schedule preview.
   a. Select the **Team Calendar** tab.
   b. Select the Show Schedules ( ) icon to display in the contextual side panel.
   The team calendar refreshes and generates the preview when you save a work shift.
4. Publish a schedule.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select a schedule and edit the schedule if necessary.

b. Edit the schedule if necessary and select **Save**.

c. Select **Publish**.

> **Note:**
> You can select **Delete** in **Draft** state and delete the schedule if you no longer need it.

Result

All the schedules that are in **Draft** state move to **Published** state. You can view the published schedule on the team calendar for the assigned agents. You can also analyze the scheduling gaps and staffing information by switch between the day, week, and month views in the drop-down. Agents can view their published schedules and approved leaves on MS Outlook after synchronizing their team calendars and events with Microsoft Outlook.

Track and manage your team schedule

Create, update, or monitor the schedule for your team from one location. You can approve or reject requests for swapping shifts or time off for agents within your assignment group.

Before you begin

Role required: sn_shift_planning.admin

About this task

Using the calendar, you can do the following:

- View all of your agents by assignment group.
- Get insights into team compliance with published schedules.
- View an agent's work schedule that is actual shift time vs clock-in and clock-out times.
- Filter the team calendar based on the **Assignment Group**, **Location**, **Skills**, **Shift Plan**, and **Events** for a customized view.
- Modify the agent's shift, clock-in, and clock-out timings, if necessary.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the Schedule ( ) icon.
3. Modify an agent's shift.
   The schedule that includes this shift must be in **Preview** or **Published** state.
   a. In the Team Calendar tab, navigate and hover over the shift for the agent that you want to modify the schedule for, in Day, Week or Month view.
   b. In the shift pop-up window, select the **Edit** ( ) icon.
   c. Modify the agent's shift or the shift time.

> **Note:**
> If the existing shift has a break, you can add more breaks to the shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Select shift times** and modify the **Start time** or **End time** fields to change the timing of the shift.
- Select the **Select preset shift** option and from the Shift plan list, select an existing shift to assign another shift plan to the agent. For more info on creating a shift plan, see Create a shift plan.

d. Select **Save**.

4. Approve or reject an agent's time off or shift-swap with another agent.

Note:
You must approve a request two days before the time-off or shift-swap start date. If not, the approval is auto-rejected. An administrator can change this default setting. For more information, see Setting the due date for time-off and shift-swap request approvals in Components installed with Workforce Optimization for Customer Service Overlapping time-off requests by an agent is rejected.

If you approve the request, the schedule gets updated in the team calendar based on the approvals.

Create recurring meetings

Set recurring meetings or training sessions for your team from the Schedule tab. You can create daily, weekly, monthly, or yearly meetings.

Before you begin

Role required: sn_shift_planning.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the Schedule ( ) icon.
3. Navigate to **+New** > **Meeting**.
4. Enter the title of the meeting in the **Title** field.
5. Enter the name of the participants in the **Attendees** field.
6. Enter the start and end dates of the meeting in the **Start date** and **End date** fields.
7. Enter the start and end time of the meeting in the **Start time** and **End time** fields.
8. Select the **All day** option if the meeting duration is for the entire day.
9. Select one of the following options from the Repeats list.
10. Enter some details and agenda about the meeting in the **Description** field.
11. Select **Save**.
    The meeting invite is sent to the participants selected in the Attendees field.

What to do next

You can view the meeting series on your team calendar. You can select the meeting invite on the team calendar and edit the whole meeting series or a particular meeting in the whole series.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Monitor schedule adherence of your agents

Use schedule adherence to evaluate whether or not your agents are adhering to their assigned schedules. You can look for areas where low-value activity can be eliminated or reduced and further analyze staffing levels throughout the day.

Before you begin

Role required: sn_shift_planning.admin

About this task

- Adherence is a metric to analyze how closely agents follow their schedule in completing the work assignments. Conformance measures the work completed, regardless of when it was completed.
- A high adherence rate indicates that agents are sticking to their schedules and offering customer service when expected. Low adherence suggests changing the processes or decisions to manage the team efficiently. The numbers are highlighted in red for non-adherent agents.
- Schedule adherence and conformance calculations are based on the formulas, agents' actual and planned work timings. The following are the default formulas that are used to calculate adherence and conformance for agents. However, your administrator can change the formulas, as required. The following components and formulas are used to calculate adherence and conformance:
  - The *shift_planning_clock-in* and *shift_planning_clock-out* scripts generate the agents' clock-in and clock-out events from the login and logout sessions. The business rule *Agent Time Work Event Trigger* generates clock-in and clock-out events whenever there is a change in agent's presence state.
  - **Schedule Adherence**= (Minutes worked in shift/Scheduled shift time in minutes + Overtime)
  - **Conformance**= (Minutes worked in shift + Overtime)/Scheduled shift time in minutes
- The ideal adherence percentage by default is above 70, and conformance is between 80 to 120. However, your administrator can change the threshold values. For more information, see Configure properties for schedule adherence and conformance. The agents who do not qualify to the defined threshold values are considered as non-adherent and are highlighted in red.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. Monitor the schedule adherence of your agents.

To	Do this
View schedule adherence at the organization or team level	**a.** Click the **Schedule Adherence** tab. The bar chart appears with the schedule adherence percentage and conformance percentage of your teams. **b.** View the graph and drill down further to view the analytics of your team members by clicking on the bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To	Do this
Analyze planned vs. actual scheduling for your team members	**a.** Click the **Team Calendar** tab. **b.** Select the date. **c.** View the **Time Worked** summary by clicking on the bar representing the agent's actual time worked. **Note:** The clock-in and clock-out timings are the actual work timings of your agents. The events are generated based on the agent's login, logout actions, and presence state. If an agent forgets to clock out, the system automatically generates the clock-out event after 60 minutes by default. However, your administrator can change it using *`Default threshold time for clock-out event generation (in Minutes)`* system property. Example: A clock-in event gets generated when an agent logs in or changes the presence status to **Available**. Similarly, a clock-out event gets generated when an agent logs out of the system or changes the presence status to either Offline or Break. If an agent fails to clock-out past 60 minutes of the shift end time, the system automatically generates the clock-out event.

The following team calendar snapshot illustrates how to measure how well your team members are adhering to their work schedules. The blue bar indicates the planned work shift time and next to that is the actual worked time. The default representations are purple for clock-in time, green for agent's available duration, red for the clock-out time, and grey for agent's non-available time.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Analyze adherence and conformance from the time worked summary

View the time worked summary of your team members to determine if your teams are adhering to the planned schedules. You can also use historical adherence, which is a reporting view of real-time adherence, to see how well your agents have followed their schedules in the past.

Before you begin

Role required: sn_shift_planning.admin

About this task

Adherence and conformance calculations are based on the defined configuration and your agents' actual and planned work schedules.

Note:
Your administrator can disable schedule adherence or change the configuration for adherence and conformance. For more information, see Configure properties for schedule adherence and conformance.

For information about schedule adherence, see the "Schedule adherence" section of Scheduling in Workforce Optimization for Field Service.

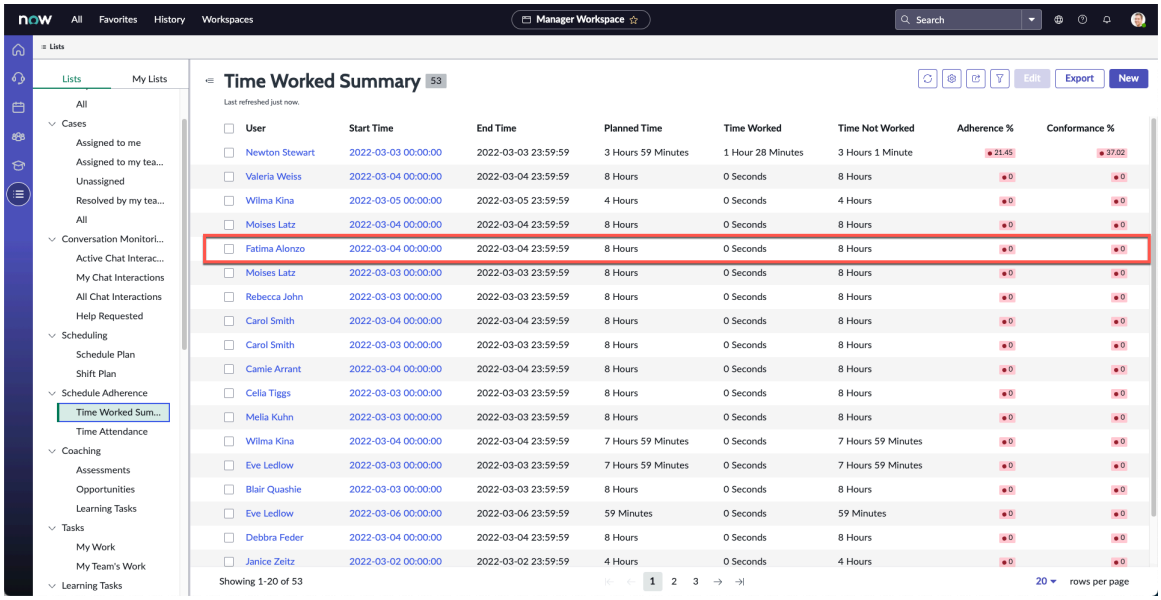
Procedure

1. Navigate to **All** > **Workspaces** > **Manager Workspace**.
2. Drill down to view the time attendance and time worked summary of your agents.

To	Do this
Analyze time worked summary of your team	**a.** Click the Lists icon ( ). **b.** Under Schedule Adherence, click **Time Worked Summary**. **Note:** The **Available Non Planned** time captures the time the agent was available and clocked in outside of the agent's scheduled work events. For example, if an agent is scheduled to attend a training from 13:00 to 14:00 but forgets to clock out that attendance, that time is considered the clocked-in time. The training time from 13:00 to 14:00 is captured as the available non-planned time.
View your agents' time attendance	**a.** Click the Lists icon ( ). **b.** Under Schedule Adherence, click **Time Attendance**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following schedule adherence example shows how to measure how well your team is adhering and conforming with their work schedules.



Example:
To understand the computations of the fields in a time worked summary, consider Fatima Alonzo's work day:

- Shift time begins at 8 a.m. and goes to 4 p.m. = 8 hours
- Planned time = 8 hours = 480 minutes
- Clocks in 8 a.m. and clocks out at 12 p.m. for a break. Back from the break, clocks in at 12:30 p.m. and clocks out at 4 p.m.
- Minutes worked in shift = 480 - 30 = 450 minutes
- Schedule adherence= (minutes worked in shift/scheduled shift time in minutes + overtime) = 450/(480+65) = 82.57%
- Conformance= (minutes worked in shift + overtime)/scheduled shift time in minutes = (450 + 65) / 480 = 107.29 percent.

Note:
Fatima Alonzo is adherent because the schedule adherence and conformance are within the threshold. To see which agents are non-adherent, look for the numbers highlighted in red.

Analyze staff alignment using Demand Forecast

Use Demand Forecast to plan the number of staff members that you require so that you have enough agents to do the job.

Before you begin
Role required: sn_agent_forecast.user

About this task
Using Demand Forecast, you can:

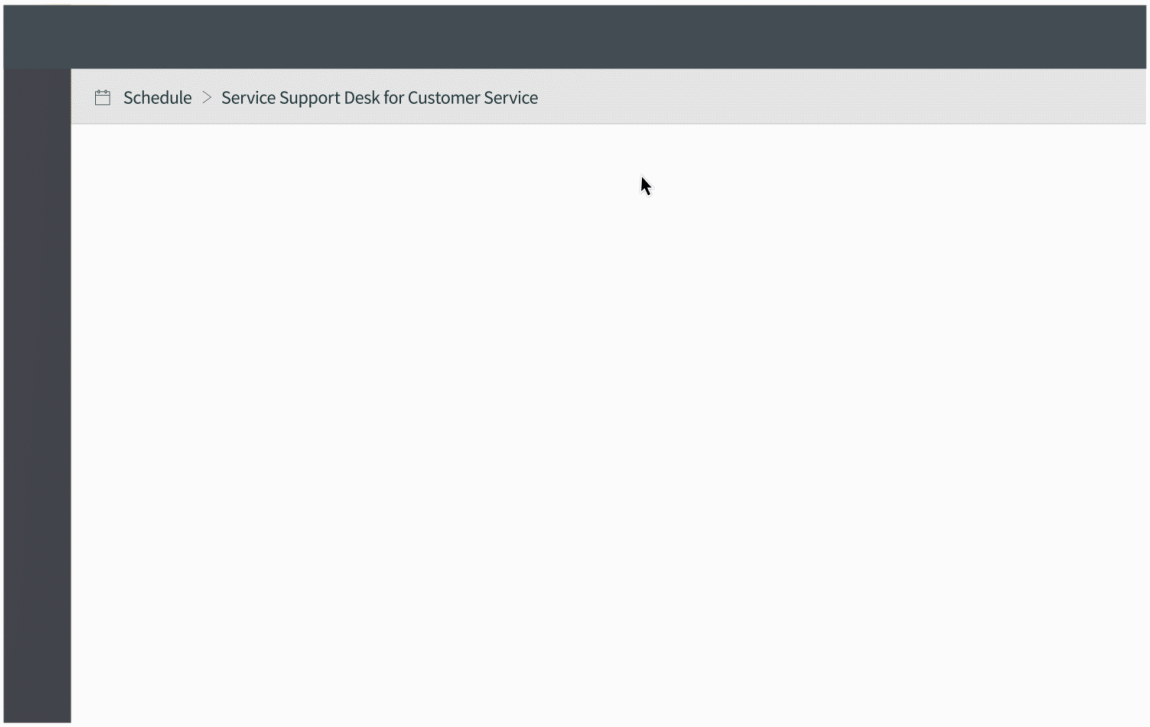
- Monitor agent or team shift coverage for any day, week, or month.
- Analyze if you are overstaffed, understaffed, perfectly staffed, or not aligned well with your staffing needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Adjust the staff alignment depending on the coverage you need and the schedule of your teams.
- Analyze staff alignment as you are creating a schedule.
- You can analyze the agent coverage you have and the actual demand for the number of agents based on assignment groups and work shifts in a day.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click the **Team Calendar** tab.
4. Analyze staff alignment for each shift.
   You can click the filter icon and select the assignment groups and shift plans for which you want to view the staff alignment.
   The following scheduling snapshots provide you an example to analyze staff alignment using Demand Forecast. The misaligned staffing indicator in the pop-up shows that the forecast manager has scheduled certain number of agents for each shift but they need more agents to cover them.



Add events to the team calendar

Create a meeting, training, time-off request, or an ad hoc work event from the team calendar.

Before you begin

Role required: sn_shift_planning.admin

About this task

You can create custom event types and add or remove the desired fields. For more information, see Create event types to display them on the team calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. Click the **Team Calendar** tab.
4. Click **+New**.
5. Create an event.
6. Click **Save**.

Swap agent shifts in Workforce Optimization for Customer Service

Swap an agent's shift in an assignment group with another agent who can work on that shift and skip the approval process.

Before you begin
Role required: sn_shift_planning.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. In the **Team Calendar** tab, navigate and point to the shift for the agent that you want to swap with another agent in day, week or month views.
4. In the shift pop-up window, click the Shift Swap icon (↑↓).
5. In the **Requested Shift** section, click the **Agent** field and select the agent who can work on that shift.
6. Click **Submit**.
   The team calendar displays the updated schedule.

Enable your teams to sign up for work shifts

Empower your teams to sign up for work shifts based on their availability and preference.

Before you begin
Role required: sn_shift_planning.admin

About this task
When a schedule plan is enabled for sign-up, you can receive notifications. You can also receive notifications when the schedule plan that's open for sign up is due on the current day or when it's due soon.

> **Important:**
> The maximum number of agents who receive notifications is controlled by the `glide.ui_notification.max_recipients` system property. Notifications are sent only up to the configured limit.

Procedure

1. Navigate to **All** > **Workforce Optimization for CSM** > **Manager Workspace**
2. Select the Schedule icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Add a schedule plan.

   a. Select the **Team Calendar** tab.

   b. In the Contextual side panel, click the Show Schedules icon to display the schedules.

   Tip:
   Select the filter icon ( ) and then select the desired sign-up state and sign-up dates to narrow down the schedule plans enabled for sign-up.

In the filters, to add the desired	Do this
Sign-up state	i. Double-click one or more sign-up states in the **Available** column to move them to the **Applied** column. ii. Select **Apply**.
Sign-up dates	i. Select a predefined option such as **Last 7 days** or select the start and end date for which you want to see the schedule plans enabled for sign-up. ii. Select **Apply**

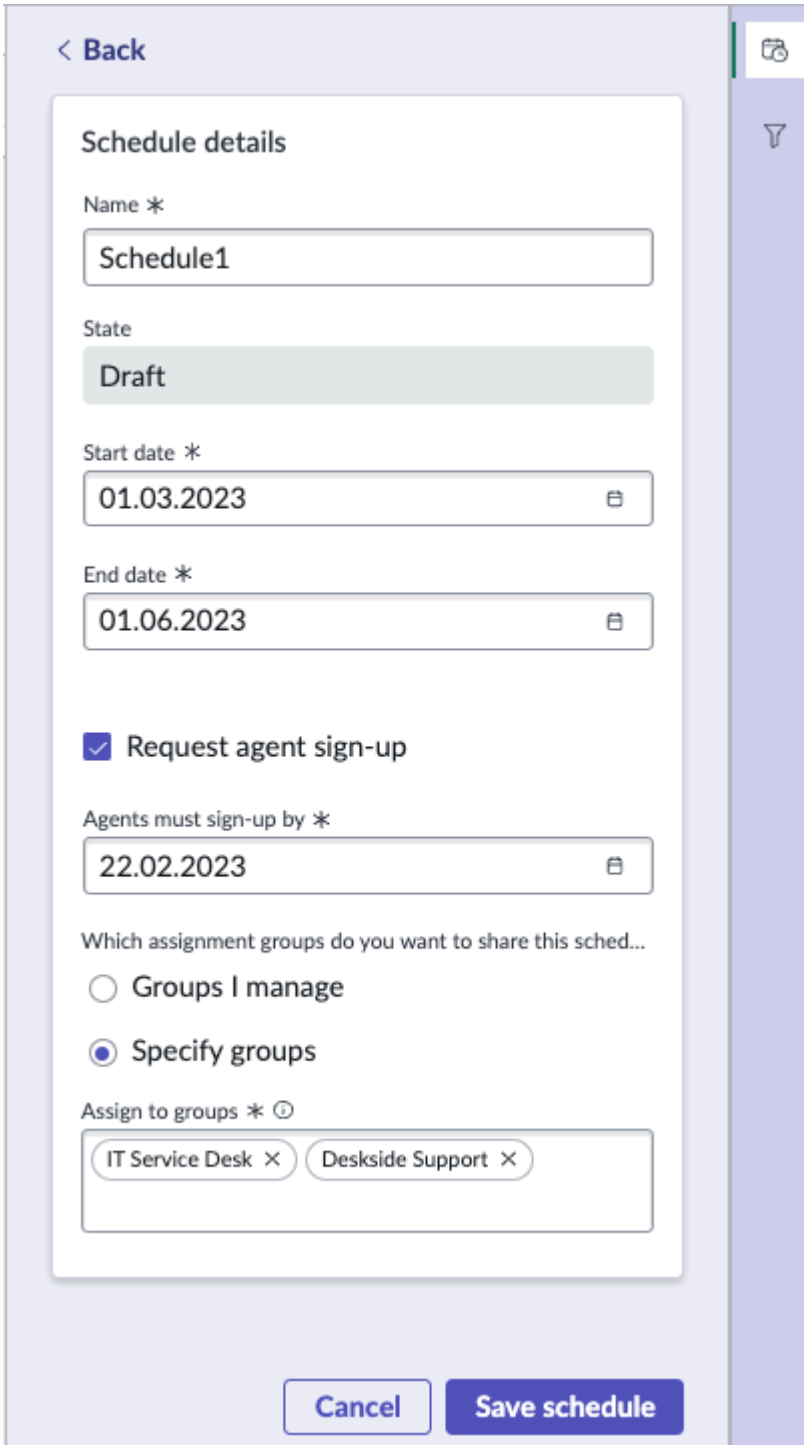
   c. In the Schedules panel, select the + icon.

   You can duplicate an existing schedule to create another one. After you duplicate a schedule that has the shift sign up enabled, you can update the start date, end date, and the date for which the agents must sign up for the schedule.

   Note:
   If there are no agents associated with the schedule, then the shifts associated with the schedule aren't duplicated.

   d. Fill in the required fields on the form.
   The image below shows an example of a filled-in Schedule form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



e. To enable your agents to sign up for work shifts, do the following:

i. Enable the **Request Agent Signup** check box.

ii. In the **Agents must sign-up by** field, enter the date by which they must sign up for shifts within that schedule.

Tip:
If your agents have signed up for their preferred shifts, the **Assigned To** field is auto-populated with those agents.

f. Select **Save schedule**.

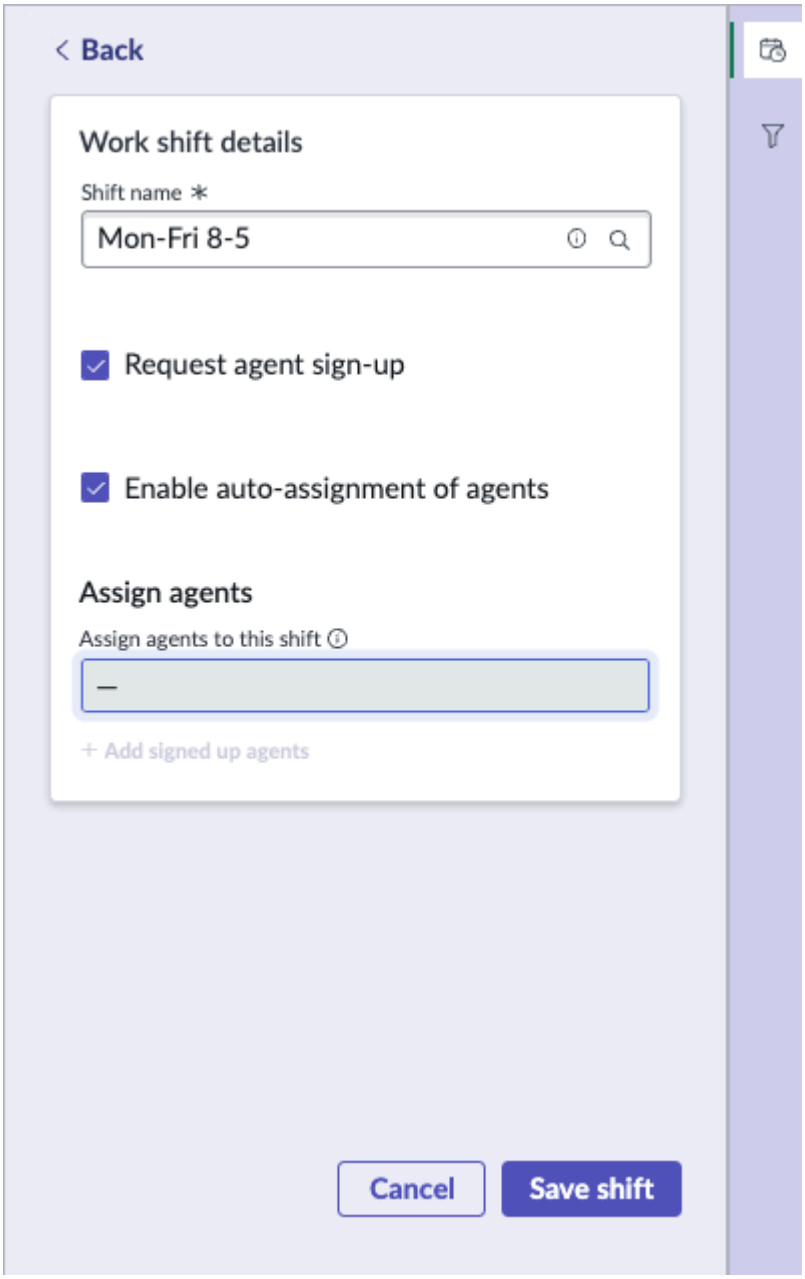
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Add a work shift to the schedule plan.

   a. Select the schedule plan you've created.
   The image below displays the schedule plan that was created.

   b. Select **Add Shift**.
   The image below provides an example of a form to enter the details for a shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



c. In the **Shift** field, select the work shift that you want to add to the schedule plan.

Note:
If the schedule plan has been enabled for agents to sign up for shifts, the following fields are automatically enabled:

- **Request agent sign-up**
- **Enable auto-assignment of agents**

If you want to assign agents manually, you can disable these check boxes at any time.

d. If the shifts are enabled for sign-up, you can select **Send for signup**.
All shifts that have been enabled for sign-up are sent to the agents to sign up for their shifts. You can select **Close sign-up** to close agent sign-up for a shift before the sign-up due date and manually assign the agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Enabled for sign-up** highlighted label changes to **Closed for sign-up**.
- The system will automatically close the sign ups after the sign-up due date.

5. Add agents to the work shifts.

6. Select **Save shift**.
   The state for the schedule plan changes to **Generating Preview**.
7. To publish the schedule plan, select **Publish**.

Note:
It may take a few minutes for the screen to refresh.

The table describes the different shift sign-up states in the schedule plan.

Schedule plan sign up state	Description
Sign-up not enabled	The schedule plan isn't enabled for sign-up.
Enabled for sign-up	○ Schedule plan is enabled for sign-up but isn't yet ready for agents to sign up for shifts. ○ Schedule plan can't be published when enabled for sign-up.
Open for sign-up	○ Schedule plan is enabled for sign-up and is ready for agents to sign up. ○ Schedule plan can't be published or deleted when it's open for sign-up. ○ When open for sign-up: ▪ The sign-up due date can't be changed. ▪ The work shift details can't be changed. ▪ New shifts can't be added. ▪ If enabled for auto-assign, the agent assignment in a shift can't be changed.
Closed for sign-up	Schedule plan is closed for agents to sign up.

Sign up for your preferred shifts

Specify one or more shifts in a schedule plan for which you would prefer to sign up.

Before you begin
Role required: sn_shift_planning.agent

About this task
You can receive notifications when your manager makes a schedule plan available for sign up. You can also receive notifications when the schedule plan that's open for sign up is due on the current day or when it's due soon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workspaces** > **Service Operations Workspace**.
2. Select the Schedule icon ( ).
3. Select the **Sign up shifts** tab.

   You can use keywords to search the schedule plans, and view all schedules with active shifts for your assignment groups that you can sign up for. Use the pagination to scroll through all available schedule plans.

   The current state of each schedule plan displays as a highlight in each card. The table below describes the highlighted value.

Highlighted value	Description
Available	Shifts for the schedule plan are available for sign up.
Draft	Shifts you've considered for sign-up but have not completed the sign-up process.
Completed	Submitted one or more preferred shifts within the schedule plan.
Closed Incomplete	The schedule plan currently does not have shifts for which you could sign up.
Closed Complete	The schedule plan has at least one preferred shift for which you've signed up.

4. Select the Overlapping time off icon ( ) to analyze if the time off you have requested or the ones that have been approved overlap with the schedule plan available to you for sign up.
5. To sign up for your preferred shifts, select **Add shifts**.
   You can only sign up for shifts in the schedule plan that have not been published yet.
   The Add shifts pop-up appears. You can search for shift using the search bar and select shifts to save as draft.

   You can sign up for a maximum number of shifts that your administrator has set up in the *sn_shift_planning.max_shifts_allowed_for_signup* system property.
6. To save the selected shifts for sign-up, select **Save Shifts** and then select **Save as draft**.
7. Select the plus (+) sign and sign up for additional shifts.
   When you have more than one shift, you can reorder them by using the up or down arrows in card for each shift.
8. Select **Submit**.
   All shifts you have added for sign up will be submitted.

Understanding user criteria for event types in Workforce Optimization for Customer Service

Manage user access for any event type such as meeting, training, and time-off requests in the team calendar.

You can include or exclude Create, Read, Write or Update, and Delete (CRUD) rights for event types using the inclusion and exclusion user criteria access. You can perform the CRUD operations for users, groups, or roles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
By default, team members don’t have read-access to events of type **Actual work**.

For additional flexibility around managing the CRUD access, you can set the user criteria for each event type. For example, if team members don't have access to edit their work shifts using their role-based access, you can set that access using user criteria. You can set this access for specific team members or for the whole group.

Inclusion and exclusion logic for event types

How inclusion and exclusion user criteria access works

When the user criteria rules get evaluated, it's done in the following order:

1. The system first evaluates the exclusion access for each criteria.
   - If the exclusion access for a CRUD operation is set to **true**, then the system evaluates the user criteria.
     a. If the user doesn’t have access based on their role, then the user is denied access for the specific CRUD operation.
     b. If the user isn’t denied access, then the system evaluates the inclusion criteria.
   - If the exclusion access for a CRUD operation is set to **false**, then the system evaluates the inclusion criteria.
2. For the inclusion access, for a specific CRUD operation such as Create, the system checks if at least one of the inclusion user criteria is set to **true**. If yes, then the system evaluates the user criteria based on the user's role access.
   - If the user:
     - Has access for the CRUD operation based on their user role, then the user can perform that action. For example, if the event type is training and the CRUD operation is **Create** then the user can create the training event types.
     - Doesn’t have access for the CRUD operation based on their user role, then the user can’t perform that action.
   - If at least one of the inclusion criteria isn’t set to **true**, the user doesn’t have access to the specific CRUD operation. In this example, the user can’t create the training event types.

Note:
The exclusion access always takes precedence over the inclusion access. If no inclusion or exclusion access is set, then the role-based access is used for managing event types.

© 2026 ServiceNow, Inc. All rights reserved.

Create user criteria for event types in Workforce Optimization for Customer Service

Add a user criteria record to specify which users, roles, and groups can access event types in Workforce Optimization for Customer Service.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Definitions** > **User Criteria**.
2. Select **New**.
3. On the form, fill in the fields.

User criteria form field

Field	Description
Name	Unique name for the user criteria
Users	Users who can access event types.
Groups	Groups who can access event types.
Roles	Roles who can access event types when you apply the user criteria.
Advanced	Option to create a script for the user criteria.
Active	Enabling the check box makes the user criteria available.
Companies	Companies who can access event types.
Location	Locations that can access event types.
Departments	Departments that can access event types.
Match All	Option to make every condition that is set required when the user criteria are applied.

4. Select **Submit**.

Include or exclude user access for event types

Add or remove access to users for any event type so that they can view event types that are relevant only to them.

Before you begin

Role required: sn_shift_planning.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for CSM** > **Scheduling** > **Event Configuration**.
2. Select an event.
3. Exclude or Include specific CRUD access for users to events.
4. Click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Verify access criteria for a group or a team member in Workforce Optimization for Customer Service

Check what create, read, update, and delete rights your groups or your team members have for events to make sure that they have the correct permissions that they need.

Before you begin

Role required: sn_shift_planning.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. In the lists module, go to **Scheduling** > **Event type**.
3. Select an event for which you want to verify user access.
4. Select the **User access** tab.
5. Do any of the following.
   The screen displays the create, read, write, and delete columns as **true** for each team member that has access to the specific type of access to the selected event.

Teams in Workforce Optimization for Customer Service

Use Teams to track and analyze performance trends for your teams from a single location. You can monitor the trends for each agent within your team and compare your agents or team members with one another.

With Teams, you can do the following:

- Identify skill gaps so that you can recommend which skills are needed to coach your agents.
- Organize your teams into assignment groups. You can add a set of key performance indicators (KPIs) to help you measure team performance consistently across the groups. For example, the Customer Service Desk unit contains multiple teams, such as Hardware and Network Support. You can create a KPI group for the Customer Service Desk unit and then add Hardware and Network Support as assignment groups to this KPI group. Next, you add a set of KPIs to the KPI group. With this data, you can measure the performance trends across the Hardware and Network Support teams.
- Compare KPIs between multiple teams belonging to the same KPI group.
- View the KPIs between the selected date range.
- Drill down into a Team level KPI to view the split of KPIs across all individual team members.
- View the KPI trend to analyze the future forecasts for each of the KPIs, if the date range has the latest values.
- Targets can be set on the KPIs through the team performance page at the global or individual level. When such targets are set, the trendline reflects the targets.
- Drill down to the individual agent level to view a 360 degree view of the current work, historical KPIs, presence history, channel capacity utilization, skills, and upcoming time-offs.

Analyze the performance trends for your teams

Analyze trends to monitor your team's performance and adherence within a KPI group.

Before you begin

About this task

Analyze the data by drilling down into the data for a team, a specific team member, an indicator, or a case.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Teams icon.
3. Select a date range to view your teams' performance for that time period.
   You can set the default date range using the *sn_team_perf.default_date_range* system property.
4. Analyze team performance.
   a. Select a team.
   b. In the **Performance** tab, track and analyze the overall indicator performance for all members in the team.
   c. Drill down into the data for this team:

Performance indicators

To	Do this
Analyze indicator performance	▪ To analyze the indicator performance for the team, click an indicator value for the team in the header row. ▪ To analyze indicator performance for a team member, click an indicator value for the team member.
Track cases	Click the **Tasks** tab and analyze all cases related to the team. ▪ To view the cases details, select a case. ▪ To view the a team member's details, select a team member.

You can also review cases, details of assignment groups, additional managers, and information relevant to the team.

Setting up Teams Workforce Optimization for Customer Service

Coaching in Workforce Optimization for Customer Service

By using Coaching in Workforce Optimization for Customer Service, you can assess your team's abilities to efficiently resolve cases by reviewing their work at critical moments of customer service.

With Coaching, you can do the following:

- Recommend training for your agents to address skill gaps.
- Use the coaching opportunities that are available by default to coach your agents. You can also create a coaching opportunity using the Coaching application specific to your agent needs.
- Use assessments and surveys to apply consistent, measurable scores across teams.
- Use Predictive Intelligence to recommend skills for your agents and provide training to address those skill gaps.

Skills Overview in Workforce Optimization for Customer Service

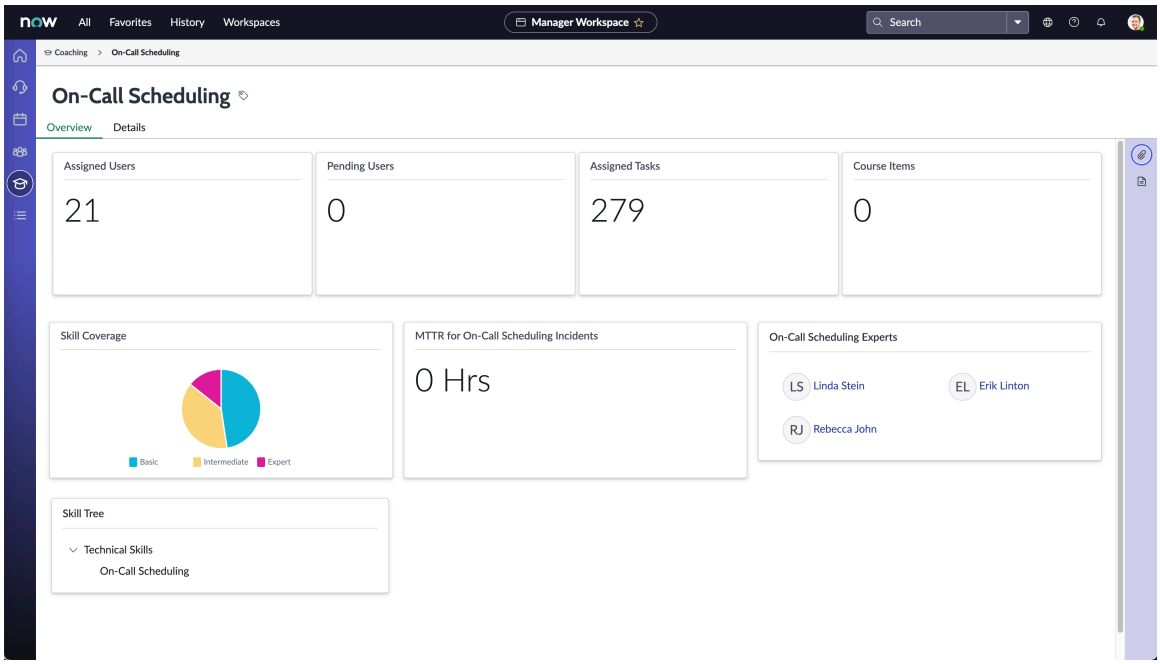
Use Skills Overview to analyze skill data such as how many skills are assigned to users and tasks. You can also see how many experts you have for a particular skill and the overall skill coverage by your teams.

Access Skills Overview from the Teams application:

1. Go to **Workspaces** > **Manager Workspace**.
2. Click the Teams icon .
3. Select a team.
4. Click the **Skills** tab.
5. Select a skill.

You can access the Skills Overview page when you click on a skill in a user profile page in any Workforce Optimization for Customer Service application.

Note:
You must enable the Coaching With Learning application to view the reports from the application. For enabling this application, see Activate Workforce Optimization for Customer Service.



Use cases

Use Cases

User	Landing page use
Skill Admin [skill_admin]	• Analyze all experts available for each skill. • Drill down into the skill hierarchy. • Number of skills assigned to users and tasks.

KPIs

Title	Type	Source table	Description
Assigned Users	42	User Skill [sys_user_has_skill]	The number of users who have the selected skill assigned to them.
Assigned Tasks	42	Task Skill [task_m2m_skill]	The number of tasks for which this skill has been assigned.
Pending Users	42	Pending Users [sn_lc_learning_task]	The numbers of users who are yet to be assigned the selected skill from the learning task.
Course Items	42	Learning Course Item [sn_lc_course_item]	The number of internal and external courses that have the skill associated with the course item.

Assess the quality of completed tasks

Assess the ability of your agents to resolve cases or the quality of their completed tasks.

Before you begin

You can create an assessment from an interaction or any task type.
When you manually create an assessment, you can add a survey to it. Coaching assessments also get created and assigned to the coach based on the trigger conditions that are defined in coaching opportunities.

Role required: sn_coaching.coach

Watch this short video to get an overview on coaching, assessments, and trainings.

Workforce Optimization for Customer Service Coaching Overview.

About this task

If the coaching opportunity includes a survey, you can opt to take the survey and the assessment. When you use a survey to assess a trainee, the score for the survey is automatically calculated when you complete the survey. The assessment rating is then updated based on that score.

The Coaching Overview screen displays the average quality of the tasks that were completed in the past 30 days for your assignment groups.

- The donut chart displays the number of assessments in various states of completion. You can point to one of the states and click to open all assessments in that state.
- The bar chart displays assessments created by coaching opportunities. You can click on any of the data in the graph to access the assessments.
- You can click on the graph that displays the indicator data and access detailed information on the indicator.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.
3. Do any of the following.

4. On the form, fill in the fields to assess the agent.

Assessment form

Field	Description
Opportunity	Coaching opportunity that is associated with the coaching assessment.
State	State of the assessment. ○ **Open**: New coaching opportunity ○ **Work in progress**: Trainee is being coached ○ **Resolved**: Trainee is assigned coaching programs and training modules. ○ **Closed Complete**: Assessment has been resolved and closed. ○ **Closed Incomplete**: Assessment that has been closed but not completed, typically because the coaching assessment **Due Date** has expired.
Assessment Rating	How well the agent resolved the incident. The Coaching application automatically populates this field when a coach completes a survey for the trainee.
Follow up	Whether the coach must take further action to improve the trainee performance.
Comments	Notes, if any, to add about the assessment.
Survey taken by coach	Survey for the trainee taken by the coach. You can add a survey for an assessment when you create the assessment manually or when the coaching opportunity triggers an assessment that does not have a survey. When a coaching opportunity triggers an assessment and contains a survey, the survey is automatically added to the assessment and cannot be changed by the coach.
Survey taken by trainee	Survey for the coach taken by the trainee.
Add skills	Skills to add to the trainee profile when the assessment is complete. When you click this field, it displays all skills and the skill levels that are not in the trainee profile.
Add training	Training to assign to the trainee. You can also assign learning tasks from course items.

5. Do the following:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To complete the adhoc assessment, click **Save**.
- To complete assessments creating using coaching opportunities, click **Complete assessment**.

Manage skills using Workforce Optimization for Customer Service

Add or update skills for an agent. You can approve predicted skills if the skill is necessary for the agent to complete assigned tasks. You can also reject a skill if it doesn't apply to the agent.

Before you begin

Role required: skill_manager

About this task

The Predictive Intelligence application for skills displays the recommended skills on each agent's profile. The application uses sample cases that the agent has worked on to recommend skills for an agent.

You can view skills for all users grouped by assignment group and the overall skill coverage for each group.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.
3. Click the **Skills** tab.
   You can view the list of all assigned skills and the skill level for each agent on your team. For more information on skills and skills levels, see Skills Management .

   You can also filter the skill matrix based on users, groups, skill type, skill level, or skill category. Reset the filter if you want to view the skills for all users.
4. Add a skill or skill level.
5. Approve or reject a skill that is recommended by Predictive Intelligence.
   a. In the skill matrix, click **Recommended** to approve and recommend a skill for the user.
   b. In the **Details** tab, review the request for skill approval, the sample case resolutions that were used to predict the skill, and the activity stream.
   - To approve a skill, click **Approve**. The skill is added to the agent and the lowest level for the skill is automatically associated with the added skill. The state for the request changes to **Approved** and the skill is added to the agent.
   - To reject a skill, click **Reject**. The state for the request changes to **Rejected**. Predictive Intelligence does not recommend the skill for the user again and the field changes to **Add**.
   - Click the More Options ( ) icon and select **Save**.

   The application assigns the skill to the user. If the assigned skill does not have a skill level, the application adds the basic skill level to the user.

Coaching with Learning

Use Coaching with Learning to train your agents with internal and external learning content. Organize similar content in catalogs. Assign learning tasks and track completion.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Coaching with Learning is available when you enable the Coaching with Learning application from the ServiceNow® Store. To enable this application, see Activate Workforce Optimization for Customer Service.

Create a learning catalog

Create a catalog to organize related content into categories.

Before you begin
Role required: sn_lc.catalog_manager

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.
3. Click the **Learning** tab.
4. Click **Learning Catalogs** and select **My Catalogs**.
5. Create a catalog.
   a. Click **New**.
   b. In the **Title** field, enter a unique name for the catalog.
   c. In the **Description** field, enter a description for the catalog.
   d. Click **Save**.

   Note:
   The catalog is visible to all groups that you directly or additionally manage.

6. Add course items to the catalog.
   a. Click the **Content** tab.
   b. Click **Add**.
   c. In the **Add Learning Courses** pop-up window, select all course items you want to add to the catalog.
   d. Click **Add**. The course items are added to the catalog.

   Note:
   To remove any course item you have added, select the course item and click **Remove**.

7. Add a group to a catalog.
   a. Click the **Applicable Groups** tab.
   b. Click **New**.
   c. In the **Group** field, select a group that you want to associate with the catalog.
   d. Click **Save**.

Create a learning task

Create learning tasks for agents to keep track of their learning activities.

Before you begin
Role required: sn_lc.task_creator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Set learning task completion due dates to include or exclude weekends using the *exclude_weekends_on_learning_task_due_date* system property. For more information, see Workforce Optimization for Customer Service Reference.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.
3. Click **Learning Tasks** and select **All Tasks**.
4. Create a learning task.
   a. Click **New**.
   b. Fill in the following fields.

All tasks form fields

Name	Description
Assigned to	Name of the agent to whom you want to assign the learning task.
Course item	The course that needs to be completed by the agent.
Due date	Date when the agent must complete the course. Default is 5 days after the creation of the learning task. This value is calculated from the **Days to Complete** field for the course item. The due date field is highlighted as follows: ▪ Green—if the task is due before the current day. ▪ Yellow—if the task is due on the current day. ▪ Red—if the task is due after the current day.
Catalog	The catalog that contains the course item for the learning task.

5. Click **Save**.

Create internal learning content

Add internal courses so that agents can learn new content and enhance their skill set.

Before you begin

Role required: sn_lc.content_creator

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.
3. Click **Learning Courses** and select **Internal Courses**.
4. Create an internal learning course.
   a. Click **New**.
   b. Fill in the following fields in Details tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Internal courses form field

Name	Description
Title	Name of the course.
Internal source	Select the type of content for the course. Here are the available types of courses: ▪ URL—Youtube, Vimeo, or any link for a video ▪ Knowledge article ▪ Free form
Days to complete	The number of days required to complete the course. Default value is set to 5.
Estimated duration	Length of time when the course has to be completed. For example, for a video, it is the duration of the video. For a KB article, the duration is estimated based on the length of the article.
Description	Description of the course.

5. Click **Save**.
6. Add a skill to the internal content.
   a. Click the **Associated skills** tab.
   b. Click **New**.
   c. In the **Skill** field, select a skill you want to associate with the internal content.
   d. In the **Skill level** field, select a skill level for the selected skill.
   e. Click **Save**.
7. Add a learning task to the internal content.
   a. Click the **Learning Tasks** tab.
   b. Click **New**.
   c. In the **Assigned to** field, select a trainee to whom you want to assign the learning task.
   d. In the **Catalog** field, select the catalog to associate with the learning task.
   e. In the **Due date** field, click the calendar icon and select the date and time when you want to trainee to complete the learning task.
   f. Click **Save**.

Add external courses to coaching with learning

Add courses from external sources such as Udemy, Pluralsight, or Cornerstone to enable your users to gain skills from external content.

Before you begin

Role required: sn_lc.learning_admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Coaching ( ) icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click the **Learning** tab.
4. Go to **Learning Courses** > **External Courses**.
5. Select a course.
6. Click **Go to course**.
   You can review and learn the external course.

Mobile experience for Workforce Optimization for Customer Service

Manage customer service cases from your mobile device with the Now Mobile Agent application. You can stay connected and access information in real time so that you can complete your tasks quickly.

If you're an agent (sn_customerservice_agent) or a manager (sn_wfo_csm.manager), you both can use real-time notifications from the application to take action on an issue. Before you can do so, you must activate the Customer Service Mobile Plugin (com.sn_csm_mobile). For more information about the Now Mobile for Customer Service Management, see Mobile experience for Customer Service Management

- To get started with this application, follow the instructions in Get started with the Customer Service mobile application.
- You can learn about the agent and manager tasks that you can perform in Use the mobile application to perform agent and manager tasks. Additionally, you can also perform the following tasks for Workforce Optimization for Customer Service.

Agent tasks

Agent tasks	Action	Description
Approve or reject shift-swap request	• Tap the notification. • **Approve** or **Reject** the shift-swap request.	Agent receives notification that the shift swap request is either approved or rejected.

Manager tasks

Manager tasks	Action	Description
Approve or reject time-off request	• Tap the notification. • **Approve** or **Reject** the time-off request.	Agent receives notification that the time-off request is either approved or rejected.
Approve or reject shift-swap request	• Tap the notification. • **Approve** or **Reject** the shift-swap request.	Agent receives notification that the shift swap request is either approved or rejected.
View critical and high priority cases that breached SLA	Tap the notification. The case record appears.	Review the case record and take appropriate action.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Furthermore, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect case information (for chat summarization, resolution notes generation, knowledge generation, call summarization), chat transcripts (for chat recommendation), and email information (for email response). Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist for Customer Service Management (CSM)

With the Now Assist for Customer Service Management (CSM) application, your agents can use generative AI to summarize the customer chat conversations and case details to get the context of the case. They can also generate the case resolution notes to share with the other agents and wrap up cases faster.

Summarize a chat with Now Assist for Customer Service Management.

Now Assist for Customer Service Management (CSM) overview

The following generative AI capabilities are available for an agent:

- An interaction chat summary provides the context about the chat conversation between your agents and customers at different points of the handoff, such as when a Virtual Agent chat history is handed off to a live agent, or when one live agent hands off a chat history with a customer to another live agent.
- A case summary enables an agent to gather the case context on long-running or complex cases. Because these cases can contain a lot of information, including the conversations with the customer or other agents, an agent can generate a summary to gain understanding faster.
- The case resolution notes can assist an agent to help wrap up cases faster and provide the context about the case resolution to the other agents who might encounter similar issues.
- A call summary assists an agent with obtaining the key details that were discussed during the conversations between the live agents and customers. It provides a high-level overview of the conversation in a clear format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Knowledge generation can help an agent to streamline content creation. An agent can automatically generate knowledge articles by using the relevant data from the case record after proposing a resolution or closing the case. By not having to generate knowledge articles manually, this feature can save your agents valuable time and effort.
- Sidebar summary captures discussions between agents, requesters, and experts, and can be posted to case notes for further troubleshooting.
- Chat recommendation generates reply suggestions for agents using the Now Assist context menu.
- Email response generates reply suggestions for agents from existing or new emails using the Now Assist context menu.
- Sentiment analysis helps reduce escalated cases by providing agents with the most current sentiment on a case, based on customer interactions and the latest trends. It also offers insights into why the sentiment is what it is today.
- Suggested steps generation resolves cases and boosts agent productivity by automatically outlining the next best actions for unfamiliar cases in the Recommended Actions tab.
- Sentiment analysis on an account uses filters and sorting dashboards to track sentiment, providing valuable insights and reducing escalated cases.
- Conversational subflows and actions in the Now Assist panel use natural language to trigger subflows or actions, improving agent productivity and allowing them to complete tasks efficiently within the panel.
- The Portal case form guides requesters through a self-service flow using Genius Results, helping them find solutions and reducing the number of cases created.

Now Assist for Customer Service Management (CSM) skills

The Now Assist for CSM application includes the generative AI skills that enable your agents to understand the chat and case context so that they can propose resolutions to the customer more quickly.

Chat summarization

Provides an agent with a summary of a customer's Virtual Agent chat history, live agent chat history, and the interaction history. Agents can view or create the following summaries:

- Virtual Agent chat handoff summary: Summarizes the conversation when Virtual Agent hands off a chat to a live agent and displays the summary in the Active Chat window. An agent can view a summary of the actions that were taken by a customer before engaging with a live agent.
- Live Agent to Live Agent handoff summary: Summarizes the conversation when a live agent hands off a chat to another live agent and displays the summary in the Active Chat window. An agent can view a summary of the actions that were taken by a customer before hand off to another live agent.
- Quick action summary: Provides a summary when an agent uses the `/summarize` quick action in the Active Chat window.
- Chat wrap up summary: Populates the **Chat Summary** and **Short description** fields on the interaction record when a live agent wraps up a chat with a customer.

> **Note:**
> If a chat summary isn't available for the interaction, the **Chat Summary** field doesn't appear on the interaction record.

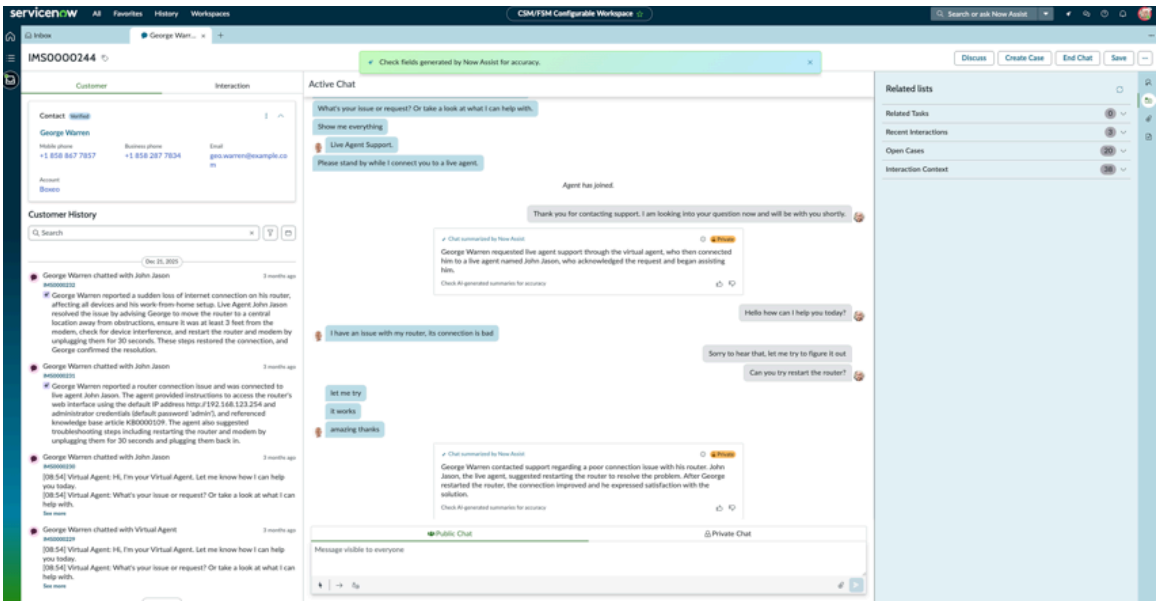
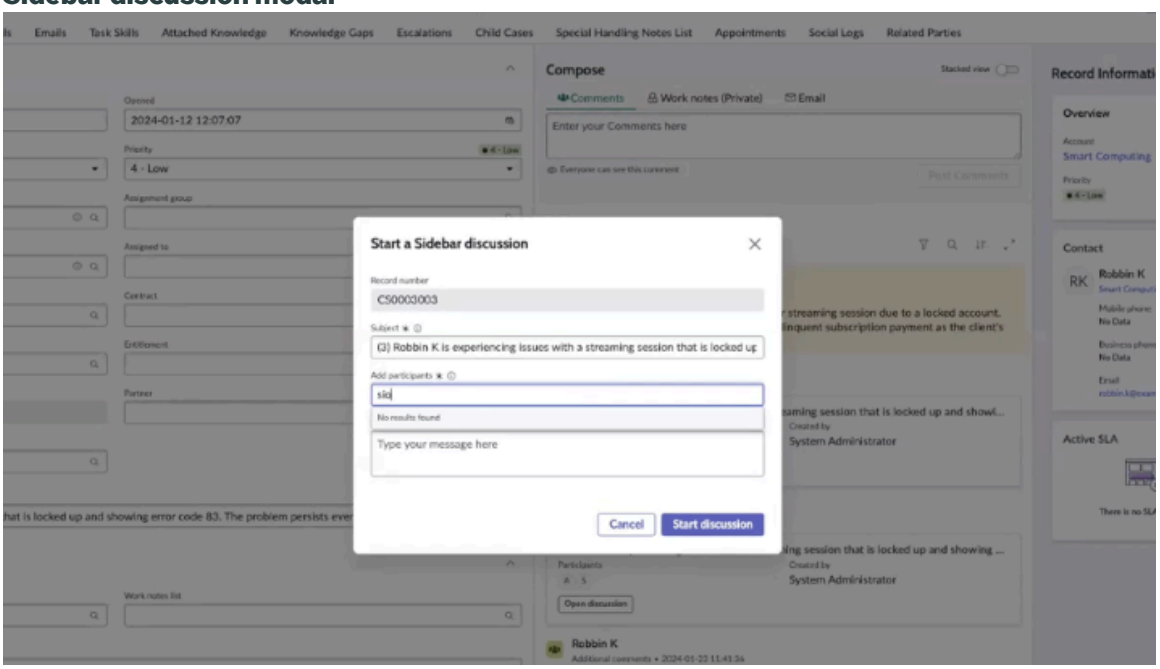
Interaction record with chat summaries



Sidebar discussion summarization

Provides an agent with a summary of the sidebar discussions between agents, requesters, and subject matter experts. An agent can also post the summary to the case work notes for further troubleshooting before or after the chat ends.

Sidebar discussion modal



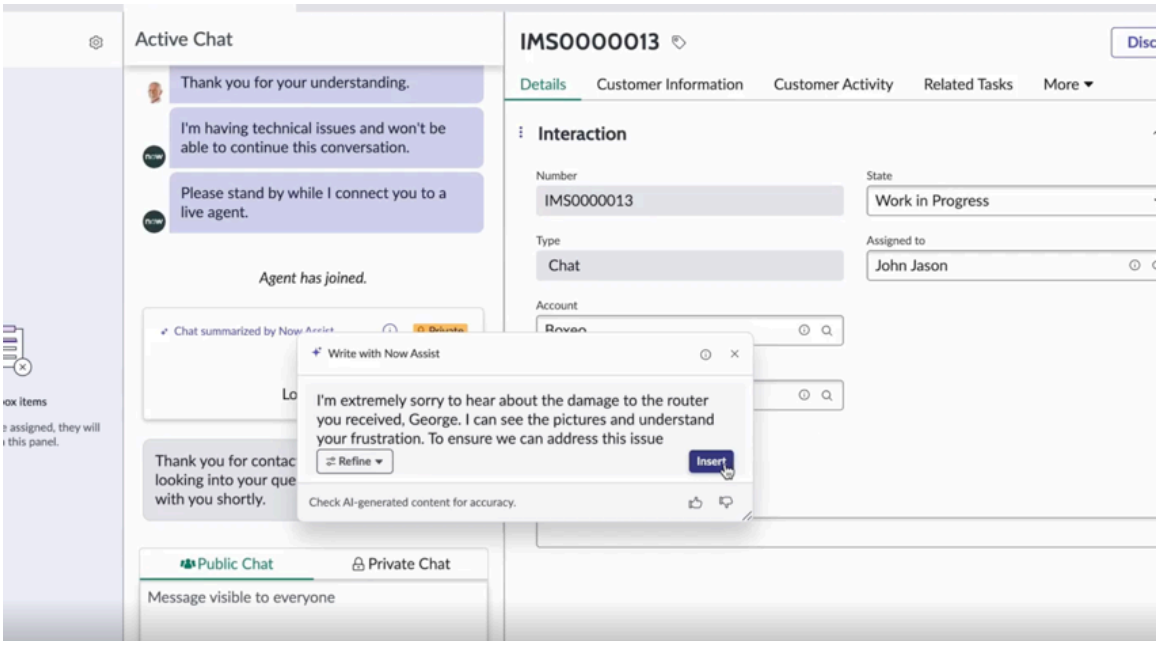
Chat reply recommendation

Enables an agent to generate a reply recommendation from a chat using Now Assist context menu.

The chat reply recommendation skill displays a pop-up window that an agent can use to generate a recommendation and review it before sending it as a reply.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist context menu



Case summarization

Provides an agent with a summary of a customer service case, including the issue and the actions taken. An agent can generate a summary of a case to understand the case context, refresh the summary so that it includes the latest updates to the case, and post the summary to the case work notes.

The case summarization skill generates a case summary and displays it above the activity stream. The summary includes the information that the agent enters in the following case record fields:

- Short description
- Description
- Work notes
- Additional comments
- Email
- Service level agreement (SLA)

© 2026 ServiceNow, Inc. All rights reserved.

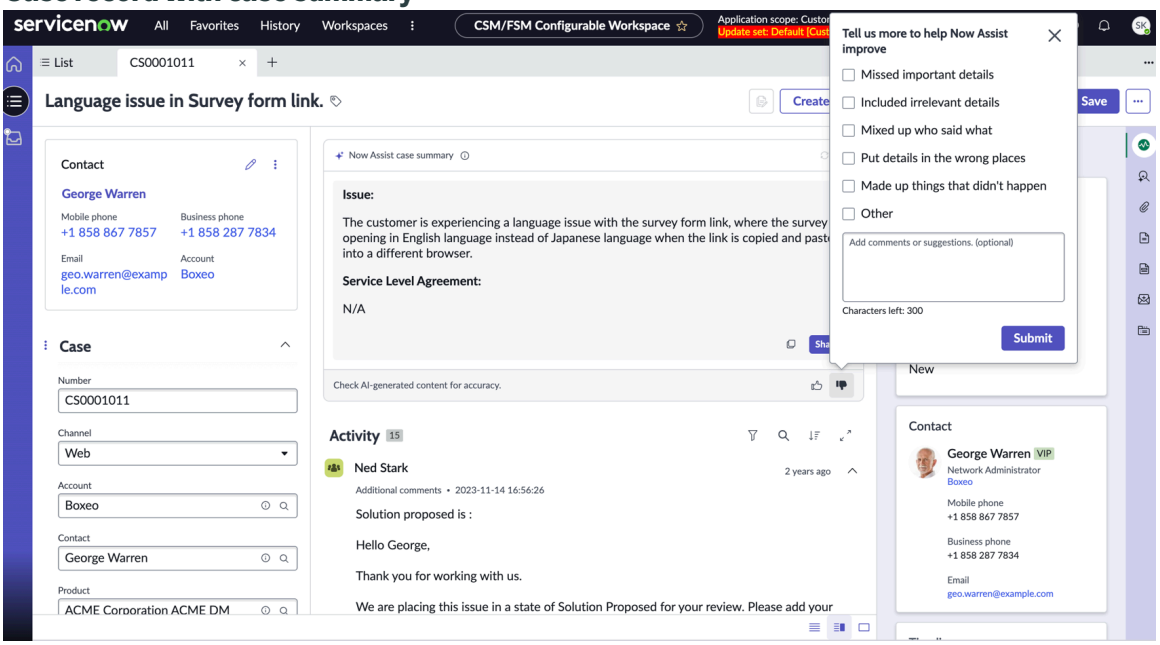
Case record with case summary

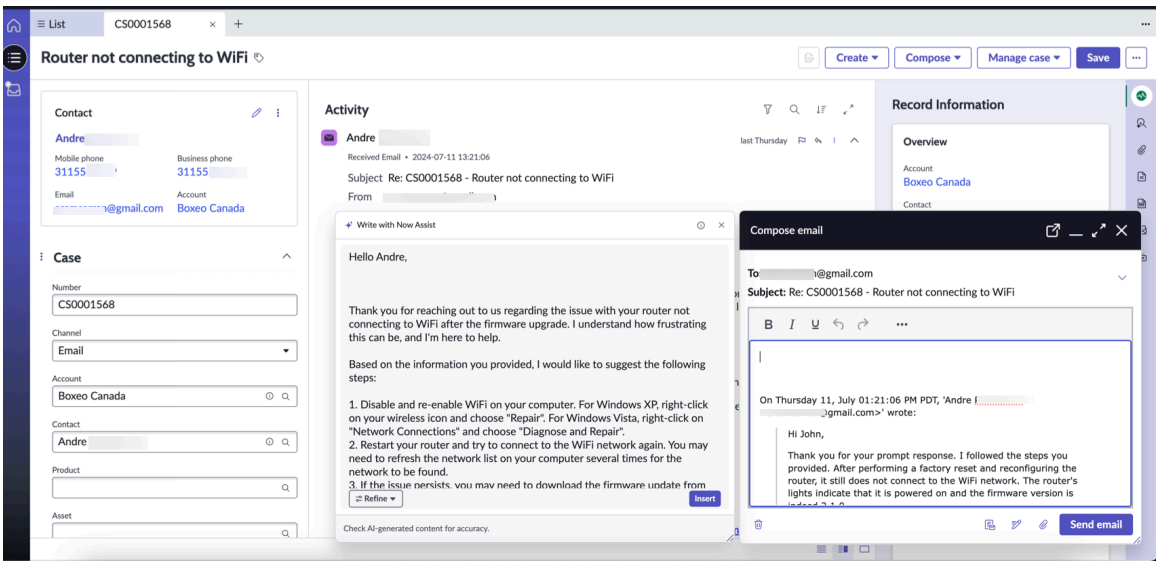


Email response

Enables an agent to generate an email response from an existing or new email using Now Assist context menu.

The email response skill displays a pop-up window that an agent can use to generate a recommendation and review it before sending it as a reply.

Now Assist context menu modal



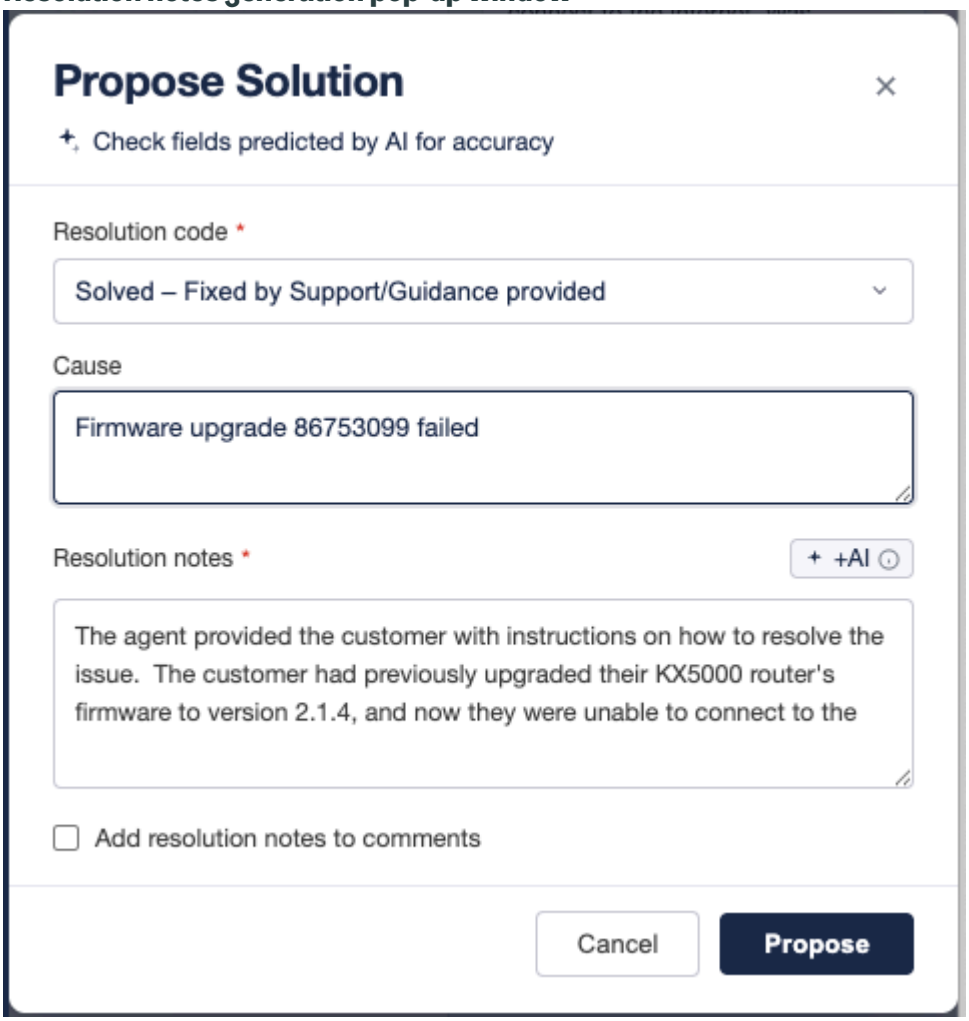
Resolution notes generation

Enables an agent to generate the resolution notes for a case, propose the resolution to the customer, and add the information to the case record.

The resolution notes that generation skill displays a pop-up window that an agent can use to select a resolution code and review the resolution notes text before proposing a resolution to a customer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Resolution notes generation pop-up window



Note:
The resolution notes generation skill requires a minimum of 50 words in the case record to generate the resolution notes. If the resolution notes can't be generated, the system displays a message below the **Resolution notes** field.

Knowledge generation

Enables an agent to generate a knowledge article from a case after proposing a resolution or closing the case.

The knowledge generation skill displays a pop-up window that an agent can use to generate a knowledge article that is based on similar cases and review it before publishing the knowledge article draft.

© 2026 ServiceNow, Inc. All rights reserved.

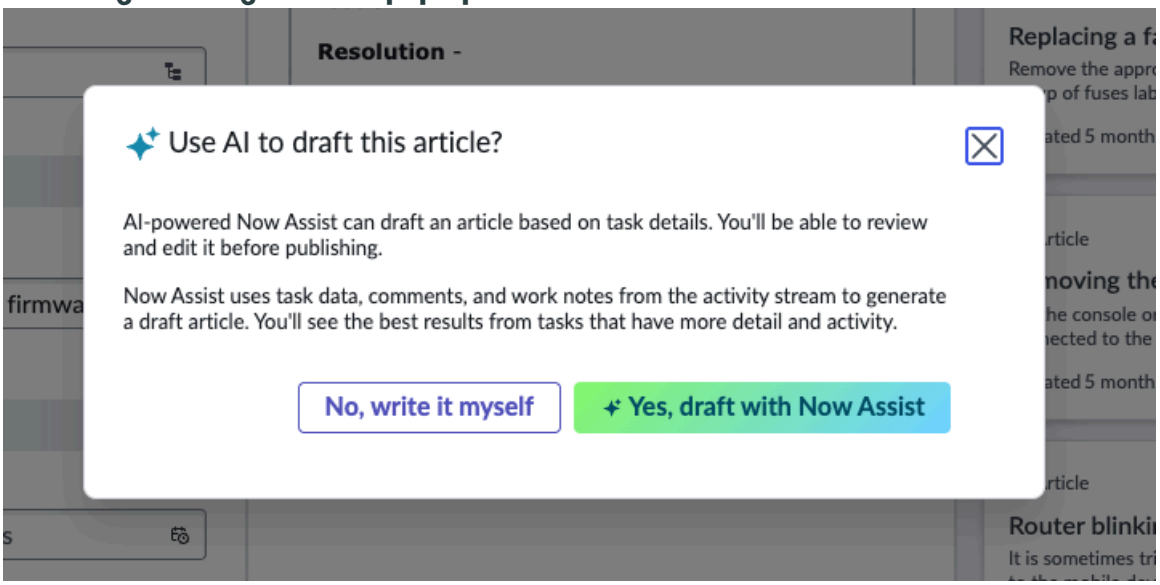
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge article generation pop-up window



Call summarization

Provides an agent with a call summary when the call ends and includes the main points discussed during the call, including the issue and the actions taken. An agent can generate a call summary of the interaction to understand the case context and post the summary to the case work notes. An agent can view or create the following summaries:

- Chat wrap up summary: Populates the **Chat Summary** and **Short description** fields on the interaction record when a live agent wraps up a chat with a customer.

  Note:
  If a call summary isn't available for the interaction, the **Chat Summary** field doesn't appear on the interaction record.

- Call summary from the Now Assist panel: Creates a summary of the conversation between the agent and customer from the Now Assist panel by selecting **Summarize conversation**.

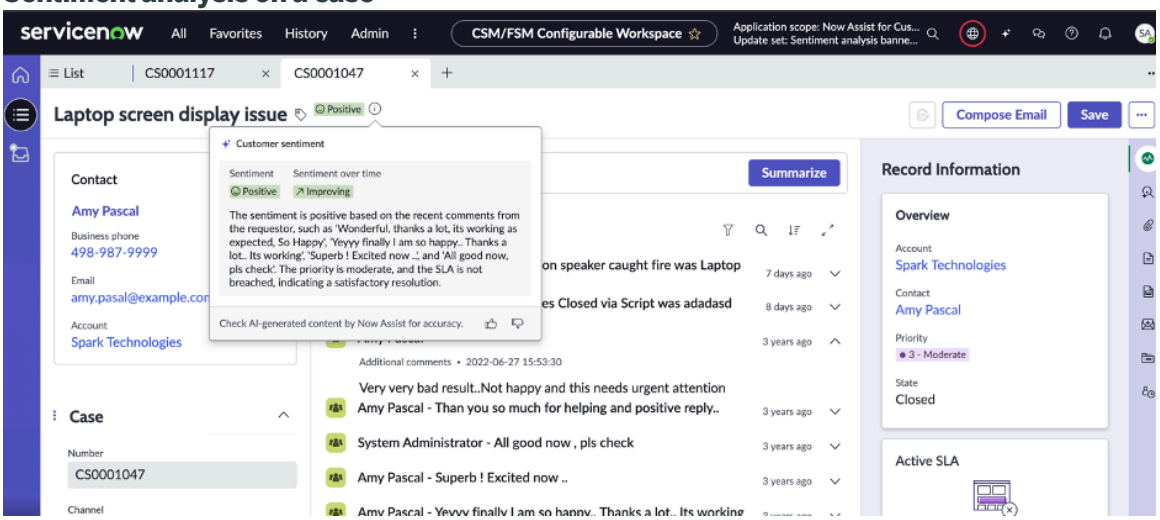
Sentiment analysis on a case

Sentiment analysis helps reduce escalated cases by providing agents with the most current sentiment on a case, based on customer interactions and the latest trends. It also offers insights into why the sentiment is what it is today.

Sentiment analysis on a case



Conversational subflows and actions in Now Assist panel

Use natural language to trigger subflows or actions, enhancing agent productivity and allowing them to complete tasks efficiently within the Now Assist panel. For more info, see Request the generative AI capabilities in Customer Service Management by using the Now Assist panel.

Now Assist in Portal case form

Guide requesters through a self-service flow using Genius Results to find solutions and reduce the number of cases created. For more info, see Using Now Assist in portal case form.

Suggested steps generation

Suggested steps generation may help resolve cases and boost agent productivity by outlining the next best actions for unfamiliar cases in the Recommended Actions tab.

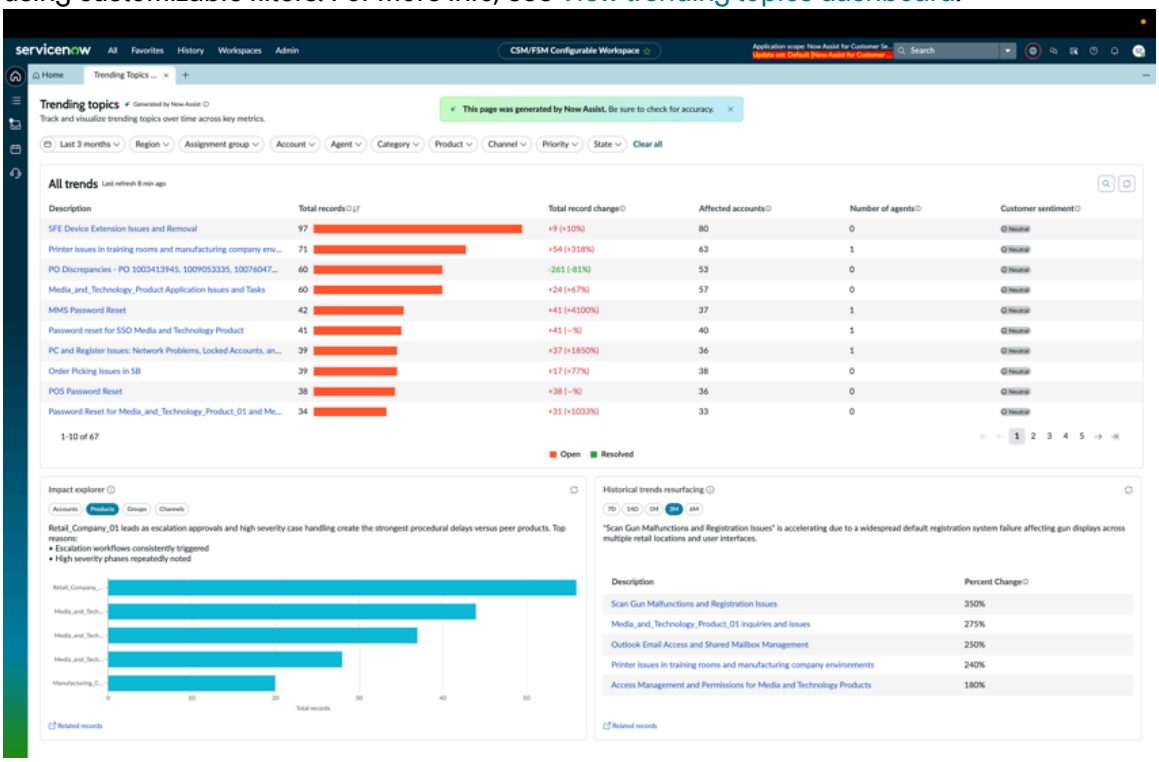
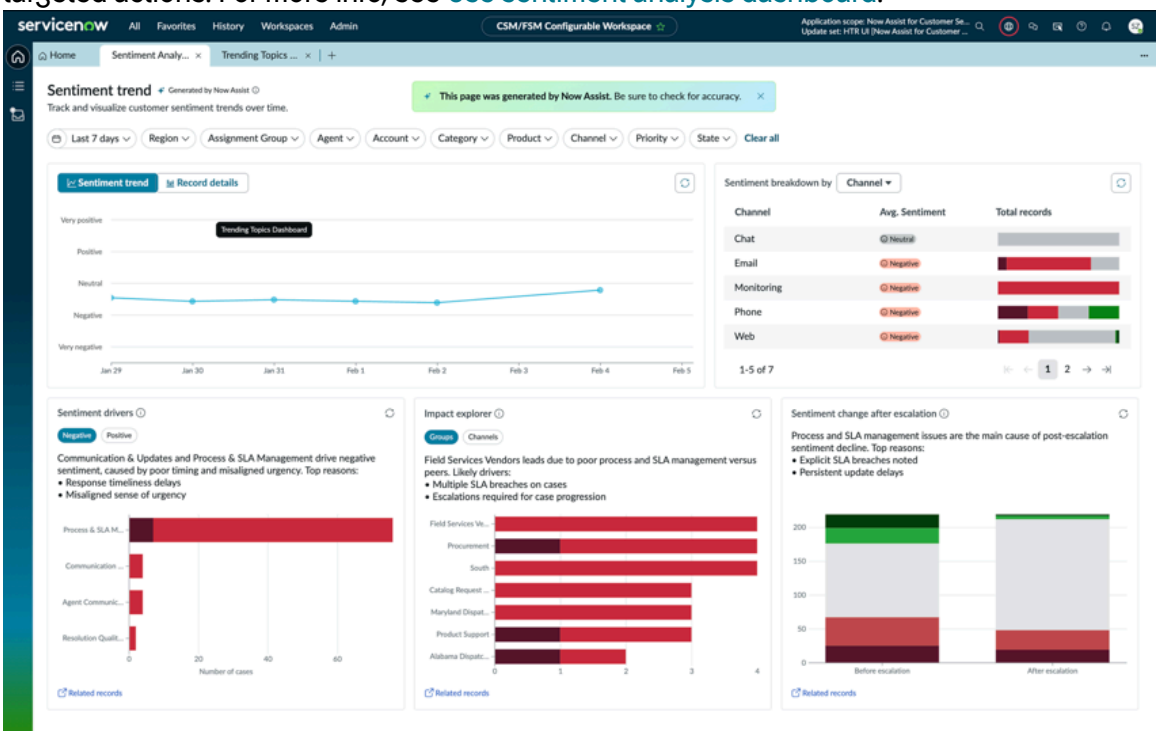
using customizable filters. For more info, see View trending topics dashboard.



Sentiment analysis dashboard

Get a comprehensive view of customer sentiment across cases and accounts. The dashboard uses Now LLM Service insights to explain sentiment changes and lets you drill down to find root causes—helping teams take targeted actions. For more info, see Use sentiment analysis dashboard.



Now Assist in AI Search

The Now Assist in AI Search application uses Now LLM Service to extract actionable Q&A Genius Result answers from the knowledge articles that are found in Service Portal, Virtual

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agent, Employee Center, and global searches. By using this application, an agent can improve the customer's experience by retrieving the relevant content from the knowledge base and generating concise answers. For more information, see Now Assist in AI Search.

Now Assist in Virtual Agent

Now Assist in the Virtual Agent guided setup can reduce the time and effort needed to deploy Now Assist within Virtual Agent. Your administrators can configure features and skills as well as sources of information such as knowledge bases and catalogs. For more information, see Configure Now Assist in Virtual Agent.

With the Now Assist Multi-Turn Catalog Requests skill, your customers can engage with Virtual Agent in a conversational manner to request catalog items. A customer can request an item and then refine their search by providing additional information. For more information, see Multi-turn catalog ordering.

Sensitive data handling

Personally identifiable information and other sensitive data can be masked so that it does not appear in generative AI prompts. Placeholder text is sent with the prompt instead, and that placeholder text is replaced with the original text after the response has been received. This two-way masking ensures that your users see the correct values, but the Now LLM Service is not exposed to any sensitive information. For more information, see Multi-turn catalog ordering.

Supporting information for Now Assist for Customer Service Management (CSM)

Get a quick overview of the important information that is related to the Now Assist for Customer Service Management (CSM) application.

Supported versions

Now Assist for CSM is supported starting with Vancouver Patch 4.

Supported language models

You can use Now LLM Service, Now LLM Long Term Stable models (LTS), Azure OpenAI, Google Gemini or Anthropic Claude on AWS as the AI model provider for all Now Assist skills and AI agents. Use the Configuration Controls in AI Control Tower to define which options are available, then set the skill-level preferences in the Now Assist Admin console. For more information, see Large language models on the ServiceNow AI Platform®.

Supported user interfaces

The Now Assist for CSM application includes the skills that are listed in the following table.

Now Assist for CSM supported interfaces

Interface	Skill
CSM Configurable Workspace	• Chat summarization • Case summarization • Resolution notes generation • Knowledge article generation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for CSM supported interfaces (continued)

Interface	Skill
	• Call summarization • Sidebar discussion • Chat recommendation • Email response • Sentiment analysis • Suggested steps generation • Sentiment analysis dashboard • Trending topics dashboard • Activity response generation
Core UI	• Case summarization • Resolution notes generation • Knowledge article generation • Sentiment analysis • Activity response generation

Languages supported

Now Assist for CSM supports the following languages across all skills:

- German
- French
- Japanese
- Dutch
- French Canadian
- Spanish
- Brazilian Portuguese
- Italian

For more info, see Configure multilingual service for Now Assist applications

Role masking for Now Assist for CSM agentic workflows, AI agents, and skills

Role masking is used to restrict user access to agentic workflows, standalone AI agents, and skills. This ensures that users only receive the permissions necessary for their tasks, enhancing security and reducing the risk of unauthorized access.

How Role Masking Works

Imagine a user assigned roles A, B, and C, where each role grants access to a specific set of data. Normally, only if using Access Control Lists (ACLs), the user could access any data or

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

functions available to roles A, B, and C. With role masking applied, the user can only access data tied to the active role, limiting exposure to unnecessary information.

Role Masking Considerations for Now Assist in CSM Skills

When a CSM skill runs, its features are initially controlled by ACL permissions, ensuring users only access authorized data and functions. If the skill uses a Large Language Model (LLM) to perform its task, role masking adds an extra layer of control by filtering the LLM-generated output according to the user's active role.

Consider a user with roles A, B, and C, each granting different privileges. If the ACLs defined in the Case Summarization are roles A, B, and C and the masking role defined is role A, If the user activates the Case Summarization skill, and selects Summarize, the process occurs in two steps:

1. **Data Retrieval**

   ACL permissions for role A are applied to fetch relevant case data. This ensures the user only sees data they are authorized to view.

2. **Data Summarization**

   After data retrieval, an LLM summarizes the case. Role masking is then applied to the output, tailoring the summary to the access privileges defined for role A.

By applying both ACL permissions and role masking, the system ensures a secure and granular access control mechanism for CSM skills, protecting sensitive information while providing users with the insights they need to perform their tasks effectively. For information on role masking, see.

AI color gradient support

Now Assist for CSM supports the AI color gradient across the following skills and workflows:

- Case summarization
- Resolution notes generation
- KB generation
- Call summarization
- Sidebar discussion
- Chat recommendation
- Email recommendation
- Sentiment analysis case
- Suggested steps generation
- Sentiment analysis dashboard
- Trending topics dashboard
- Now Assist context menu activities- tone and refining options

Application information

Activate the Now Assist for CSM store app (sn_csm_gen_ai) to use the chat and case summarization skills and to generate case resolution notes.

This store app has the following dependencies:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Customer Service (com.sn_customerservice)
- UXC Generative AI (sn_uxc_gen_ai)

Activate the applications in the following order:

1. Customer Service
2. UXC Generative AI
3. Now Assist for CSM

For more information, see Configuring Now Assist for Customer Service Management (CSM).

Configuring Now Assist for Customer Service Management (CSM)

If you have the admin role, you can configure the Now Assist for Customer Service Management (CSM) application so that your agents can use the generative AI skills in CSM Configurable Workspace and in Core UI.

Use the Now Assist Admin console to configure Now Assist for CSM. This console contains everything that you need to install the plugins and configure the generative AI skills. For additional information, see Overview tab in Now Assist Admin.

The following table lists the features and skills that you can access from the Now Assist Admin console.

CSM features and skills in the Now Assist Admin console

CSM features	Skills
Chat	• Chat summarization • Chat recommendation • Sidebar summarization
Case	• Case summarization • Resolution notes generation • Email recommendation • Suggested steps generation • Sentiment analysis case • Trending topics dashboard • Activity response generation • Sentiment analysis dashboard
Knowledge	KB generation
Call	Call summarization

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- Now LLM Service is currently the only provider for this Now Assist application's skills.
- The minimum version of the workspace required to support Now Assist for CSM features:
  - CSM and FSM Configurable Workspace Foundation (sn_cwf_wrkspc): 24.2.1.
  - CSM Configurable Workspace (sn_csm_wrkspc): 24.2.0.

For earlier versions, go to Application Manager to upgrade it to a later version.

Install Now Assist for Customer Service Management (CSM)

Install required plugins and enable Now Assist for Customer Service Management (CSM) to configure and use generative AI skills in Configurable Workspace and Core UI.

Before you begin

Role required: Admin

About this task

To get started with Now Assist, you must install at least one Now Assist application on your instance. The Now Assist Admin console can guide your implementation, starting with installation.

For information about the plugin dependencies and plugin activation order, see Supporting information for Now Assist for Customer Service Management (CSM).

For information about CSM Configurable Workspace, see Set up CSM Configurable Workspace. For information about Now Assist AI agents, see Install Now Assist AI Agents.

To access AI agents in the Now Assist panel, you need to turn on the Now Assist panel and ensure that the case summarization is active on the instance.

To install the Now Assist for CSM plugin (sn_csm_gen_ai), follow the procedure below.

Procedure

1. Navigate to **Admin > Now Assist Admin > Settings**.
2. On the **Settings** page, select**Plugins**.
3. Select **Get plugins** on the card for the plugin that you want to install.
4. In the confirmation window, select Install Plugin to open the ServiceNow Store page for the plugin in a new browser tab.
5. Install the plugin from the ServiceNow Store page.
6. Return to the Now Assist Admin console.
7. In the dialog box, select **Refresh**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Either close the dialog box to review all of your plugins or select **View all <Plugin> Assists and Skills** to review the features of your new plugin.

   For more detailed information about the installation process, see Install Now Assist plugins.

Activate Now Assist Skills

Enable Now Assist generative AI skills to provide AI-driven capabilities such as summarization, response suggestions, and sentiment analysis.

This video provides an overview of how you can set up skills and monitor and analyze usage via the Now Assist Admin console.

https://url.us.m.mimecastprotect.com/s/j3ebC5yz70hgOm7YWfzfZikEhy0?domain=player.vimeo.com

Each skill is configured separately, and tailored to support agents across various platforms. The following Now Assist skills are available to be configured for use within CSM.

Now Assist skill overviews

Skill	Description
Chat Summarization	Generate condensed summaries of conversations between agents or Virtual Agents and highlight key points for quick reference. For more information, see Configure chat summarization.
Call Summarization	Generate summaries of agent-customer calls within the Active Chat window to capture key call details for better agent follow-up and record keeping. For more information, see Configure call summarization.
Resolution Notes	Create summaries of case resolutions to help agents quickly understand resolution details and reference notes in future similar interactions. For more information, see Configure resolution notes generation.
Knowledge Generation	Draft knowledge articles based on resolving case tasks for agents to review and edit before publishing. For more information, see Configure knowledge generation.
Chat Recommendation	Help agents generate replies for chat messages based on conversation context. For more information, see Configure chat recommendation.
Email Recommendation	Generate and refine efficient email responses based on conversation context. For more information, see Configure email recommendation.
Sentiment Analysis	Analyze case sentiment, trends, and reasoning from case inputs, helping agents resolve cases more efficiently. For more information, see Configure sentiment analysis case.
Suggested steps	Generate suggested steps automatically by analyzing clusters of closed cases with similar case resolution. For more info, see Configure Suggested Steps Generation.
Sidebar summarization	Generate a summary of Sidebar discussions between agents, requesters, and subject matter experts quickly. For more info, see Configure Sidebar Summarization.
Case summarization	Summarize the case details and display this information on the case record, helping the agents to come to speed quickly on cases. For more info, see Configure Case Summarization.

Now Assist skill overviews (continued)

Skill	Description
Activity response generation	Automatically generate recommendations for resolution notes, work notes and comments, helping agents add informative updates to case records For more info, seeConfigure activity response generation.
Trending topics dashboard	View trending topics across cases with insights and visualizations, helping track trend progression, regional impact, and drill down into specific trends using customizable filters. For more info see, Configure trending topics dashboard.
Sentiment analysis dashboard	Gain a complete picture of customer sentiment across all cases. This dashboard leverages LLM-powered analysis to explain sentiment trends and their underlying drivers. Drill down into specific patterns to identify root causes and access real-time insights that enable managers to take precise, informed action. For more info, see Use sentiment analysis dashboard
Automated quality assurance	Use generative AI to automatically score agent performance across customer interactions- eliminating manual review by evaluating every conversation against configurable quality criteria. For more info, see Automated quality assurance.

General Configuration Steps

Each skill has it's own configuration process. However, skill activation follows the same guided setup. What configuring steps are required varies depending on the skill.

Common Configuration components:

- **Trigger:** Allows you to configure the circumstances in which a skill is generated. For example, chat summarizations can be configured to generate when the chat handoff is done from a live agent to a live agent.
- **Input:** Configure the data used to create the information generated by the skill. For example, resolution notes information is generated from the description, short description, work notes, and the additional comments fields of existing case notes.
- **Availability:** customize how and when the skill capability is active and accessible. For example, email reply recommendations can be configured to be always available, or defined using the condition builder to determine whether or not a user can activate the skill.
- **Access:**determine who can access this skill. By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.
- **Display:** determine where the skill appears. For example, the call summarization skill can be configured to display on forms and workspaces or in the Now Assist panel.

Saving and activating the configuration setup process is the same across all Now Assist skills.
Finalize and Activate Setup

1. After selecting **Review and Activate** to examine changes, select **Done** to close the skill configuration settings.
2. Select **Skill** to turn on the skill for agents and complete the configuration.

Configure chat summarization

Configure Chat Summarization to generate condensed summaries of conversations between agents or with a Virtual Agent, highlighting key points for quick reference.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

https://player.vimeo.com/video/1102593484?h=b893388394&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin

Role required: Admin

Chat summarizations are generated when:

- The conversation ends.
- The agent uses the summarize quick action in Agent Chat.
- The user selects chat summarization or enters summarize chat in the Ask Now Assist field on the Now Assist panel.
- A live agent transfers an interaction to a different live agent.

  When an interaction is transferred from a Virtual Agent to a live agent and is at least six lines long, the chat summarization displays in a summary card in the conversation and populates the interaction's summarization and short description fields.

Procedure

1. Navigate to **Admin > Now Assist Admin > Now Assist Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Chat Summarization** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Define Triggers** and switch the toggles to choose how and when the summarization is configured.

   Triggers for the chat summarization skill

Trigger	Description
Virtual Agent to Live Agent handoff	Chat summary that is generated when the chat handoff is done from Virtual Agent to a live agent.
Live Agent to Live Agent handoff	Chat summary that is generated when the chat handoff is done from a live agent to a live agent.
Quick action	Chat summary that is generated when the live agent performs the `/summarize` quick action.
Chat wrap-up	Chat summary that is generated when the live agent ends the chat. The **Chat Summary** field is updated for the interaction.
Short description	**Short description** field that is updated for the interaction when the live agent ends the chat.
Task creation	**Short description** and **Description** fields that are auto-populated on the task record when a task is created from an interaction.

   You can also toggle the bulleted list property to display the chat summary as an unordered list.
5. Select **Choose Input** and review the portal and channel selections that determines where data is pulled from.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You cannot modify or deselect the default product portal data source. Additionally, portals that are already in use by other products cannot be selected.

Input	Description
	○ ECKDEMO ○ ESC ○ ESCP

6. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
7. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:
   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

   Note:
   In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.
8. Select **Display** to determine where the resolution notes appear.
   - Select **In-product desktop** to display Now Assist skills on forms and workspaces.
   - Select **Now Assist panel** to display Now Assist skills in the Now Assist panel.
9. After selecting **Review and Activate** to examine changes, select **Done** to close the Chat Summarization generation settings.
10. Select **Skill** to turn on the skill for agents and complete the configuration.

Configure call summarization

Configure Call Summarization to automatically generate summaries of agent-customer calls within the Active Chat window to capture key details for better agent follow-up and record keeping.

Before you begin

Role required: admin

Call summarization is generated from the information that you enter in the following fields:

- Conversation Transcript
- Short Description (automatically populated at the end of call)
- Chat Summary (automatically populated at the end of call)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Integration setup:

> **Note:**
> Ensure that your telephony or call center system is integrated with ServiceNow if call data needs to be captured directly. For more information, see Interaction Controls Component (ICC) for voice calls and Integrating contact centers with Interaction Controls Component (ICC) for callbacks.Additionally, set your status as **Available** in CSM Configurable Workspace to be able to receive call requests from customers.

Any modifications to the names or labels of these fields can result in issues with summarization generation.

> **Note:**
> You cannot modify a skill's input data source in base system. However, you can clone the skill in Now Assist Skill Kit.

Procedure

1. Navigate to **Admin > Now Assist Admin > Now Assist Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Call Summarization** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Define Triggers** and switch the toggles to choose how and when the summarization is configured.

Table 1: Triggers for the call summarization skill

Trigger	Description
Live Agent to Live Agent handoff	Call summary that is generated when the call handoff is done from a live agent to a live agent.
Call wrap-up	Call summary that is generated when the live agent or the user ends the chat. The **Chat summary** field is updated for the interaction.
Short description	**Short description** field that is updated for the interaction when the live agent or the user ends the call.
Task creation	**Short description** and **Description** fields that are auto-populated on the task record when a task is created from an interaction.

You can also select toggle a property that controls how a call summary is displayed.

Table 2: Property for the call summarization skill

Property	Description
Bulleted list	Call summary as an unordered list.

5. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
- If custom roles were added before the upgrade, they'll be updated automatically by a script.
- If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

> **Note:**
> In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

6. Select **Display** to determine where the resolution notes appear.
   - Select In-product desktop to display Now Assist skills on forms and workspaces.
   - Select Now Assist panel to display Now Assist skills in the Now Assist panel.
7. After selecting **Review and Activate** to examine changes, select **Done** to close the Call Summarization generation settings.
8. Select **Activate** to turn on the skill for agents and complete the configuration.

Configure resolution notes generation

Configure the Resolution Notes skill to create concise summaries of case resolutions, helping agents to quickly understand resolution details and support future similar interactions using notes generated by Now Assist.

https://player.vimeo.com/video/1102610959?h=a8ec16d88d&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin
Role required: admin

Case resolution notes are generated from the information that you enter in the following fields:

- Short Description
- Description
- Work Notes
- Additional Comments

Any modifications to the names or labels of these fields can result in issues with notes generation.

> **Note:**
> It is recommended to revert to the default field name and field label for the affected fields. To remove incompatible fields from summarization, ensure a copy of the skill has been created, as not all fields are removable/configurable.

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Resolution Notes Generation** skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.

4. Select **Choose Input** and review the tables and fields to create prompts that determines where data is pulled from.

   Note:
   You cannot modify the input data source.

   Inputs for the resolution notes generation skill

Input	Description
Input table	Case [sn_customerservice_case]
Input fields	○ Description ○ Short description ○ Work notes ○ Additional comments ○ Email

5. Select **Define Triggers** and switch the toggle to require user input before resolution notes are created.
6. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
7. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

     Note:
     In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

8. Select **Display** to determine where the resolution notes appear.
   - Select In-product desktop to display Now Assist skills on forms and workspaces.
   - Select Now Assist panel to display Now Assist skills in the Now Assist panel.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. After selecting **Review and Activate** to examine changes, select **Done** to close the Resolution Notes Generation settings.
10. Select **Activate** to turn on the skill for agents and complete the configuration.
    Skill is activated for agents and a success modal shows up with the option to **Return to CSM** and to **Go to Now Assist content menu**.
11. Select **Go to Now Assist context menu** to configure the activity response generation skill's Now Assist Context Menu in Now Assist Experience.

Related topics

Generate the resolution notes for a case by using Now Assist for Customer Service Management (CSM)

Configure knowledge generation

Configure the Knowledge Generation skill to draft knowledge articles on resolving case tasks for agents to review and edit before publishing.

Before you begin

Ensure that the following is set up before you activate the skill:

1. Install the Required Plugin- Now Assist for CSM plugin.
2. Enable KCS system properties: The visibility of the **Create Knowledge** action in CSM Configurable Workspace depends on specific system properties and differs from its implementation in the Core UI UI.
   - In Core UI, the action is implemented as a UI Action.
   - In CSM Configurable Workspace, it is implemented as a Declarative Action.

   The visibility and behavior of the **Create Knowledge** button in the CSM Configurable Workspace depends on two system properties:
   - sn_customerservice.enable_knowledge_kcs: If this property is true, the button appears in the CSM Configurable Workspace.
   - sn_customerservice.kcs.enable_template_on_case_workspace
     - If this property is false, the button is a UI Action and clicking it does not open a template selector.
     - If this property is true, the button is a Declarative Action and clicking it opens a template selector modal.

   If either property is disabled, the action will not appear in CSM Configurable Workspace—even if it is visible in Core UI.
3. Activate the KCS template.
   a. Navigate to **All** > **Knowledge** > **Administration** > **Article Template**.
   b. Locate the **KCS Article**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Set its status to **Active**.

> **Important:**
>
> - For Now Assist panel, if property sn_customerservice.enable_knowledge_kcs and KCS Article Template is not enabled then it will create article using standard template for cases.
> - For Core UI / Workspace, if sn_customerservice.enable_knowledge_kcs and KCS Article Template is not enabled then it will not show **Create Knowledge** button on case form.

Role required: admin

The knowledge generation skill incorporates information that you enter in the following fields:

- Short Description
- Description
- Resolution Notes
- Work Notes
- Comments

Any modifications to the names or labels of these fields can quality the generation and quality of knowledge generation articles.

> **Note:**
> It is recommended to revert to the default field name and field label for the affected fields. To remove incompatible fields from generation, ensure a copy of the skill has been created, as not all fields are removable/configurable. Additionally, ensure that the Knowledge Management advanced installer plugin is enabled and the following system properties are set to TRUE:
>
> - sn_customerservice.enable_knowledge_kcs
> - kcs.enable_template_on_case_workspace

Procedure

1. Navigate to **Admin > Now Assist Admin >Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **KB Generation** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Choose Input** and review the tables and fields to create prompts that determines where data is pulled from.

> **Note:**
> You cannot modify the input data source.

Table 1: Inputs for the knowledge article generation skill

Input	Description
Input table	Case [sn_customerservice_case]

Input	Description
Input fields	○ Short description ○ Description ○ Resolution notes (for cases and incidents) ○ Work notes ○ Comments

5. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
6. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:
   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

   Note:
   In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.
7. Select **Display** to determine where the KB generation appears.
   - Select In-product desktop to display Now Assist skills on forms and workspaces.
   - Select Now Assist panel to display Now Assist skills in the Now Assist panel.
8. After selecting **Review and Activate** to examine changes, select **Done** to close the KB generation settings.
9. Select **Activate** to turn on the skill for agents and complete the configuration.

Configure chat recommendation

Configure chat recommendation by defining triggers, specifying inputs, setting the display location, and activating the feature.

https://player.vimeo.com/video/1102629744?h=8ef1126c0e&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin
Role required: admin

Using the chat recommendation skill, you have the options to:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Generate a recommended reply based on the context of the conversation.
- Refine the recommendation by elaborating or shortening the response.

Procedure

1. Navigate to **Admin > Now Assist Admin >Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Chat reply generation** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Define Triggers** and switch the toggle to choose how and when the summarization is configured.
5. Select **Choose Input** and review the portal and channel selections that determines where data is pulled from.

   Note:
   You cannot modify or deselect default skill input data sources.

6. Select any additional data sources that you want the Large Language Model (LLM) to take into account when generating a recommendation.
7. Select a portal for the data source to allow chat recommendation to be generated for the conversation occurring on that portal.

   This is a mandatory step. The admin must specify a portal and enable a specific channel on the Choose Input page to enable the skill for chats sent in the selected portal or channel. Otherwise, the agent will receive an error message: “Chat summaries won’t appear until your IT administrator completes all the required steps involved in the setup".

8. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
9. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they’ll be updated automatically by a script.
   - If new roles are created after the upgrade, you’ll need to manually add them in both the **Define Access** and **Select Display**.

     Note:
     In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. Toggle **Display** to determine if chat recommendation appears in In-product desktop, displaying Now Assist skills on forms and workspaces.
11. After selecting **Review and Activate** to examine changes, select **Done** to close the Chat reply generation settings.
12. Select **Activate** to turn on the skill for agents and complete configuration.

Result
Chat recommendation for the workflow is active on the instance.

Configure email recommendation

Configure email reply recommendation to help agents generate and refine efficient email responses based on conversation context.

https://player.vimeo.com/video/1102601949?h=60957c119c&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin
Role required: admin

Email reply recommendations are generated from the information that you enter in the following fields:

- Short description
- Description
- All journal fields
- Emails

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Email Recommendation** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Choose Input** and review the tables and fields to create prompts that determines where data is pulled from.

Note:
You cannot modify the input data source.

Table 1: Inputs for the Email Recommendation generation skill

Input	Description
Input table	Case [sn_customerservice_case]

5. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
6. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:
   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

   Note:
   In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.
7. Toggle **Display** to determine if email recommendation appears in In-product desktop, displaying Now Assist skills on forms and workspaces.
8. After selecting **Review and Activate** to examine changes, select **Done** to close the Email Reply generation settings.
9. Select **Activate** to turn on the skill for agents and complete configuration.

Configure extended table support for the email reply recommendation skill

Create a child skill variant of the Email reply recommendation skill to generate AI-powered email replies tailored to a specific case subtype or extended table.

Before you begin

Role required: **Admin** to copy and configure the skill in Now Assist Admin.
sn_skill_builder.admin to edit input configurations in Now Assist Skill Kit (NASK).

Confirm the following prerequisites are met before you begin:

- Your instance must be running **uxc-generative-ai** version 12.0.3 or later.
- The base Email reply recommendation skill must already be activated.

About this task

When you copy the Email reply recommendation skill in Now Assist Admin, a child skill is created that inherits the parent skill's configuration. You then open the copied skill in Now Assist Skill Kit to select the target child table and configure the additional input fields that are injected into the AI prompt for that table. Once configured, the platform automatically uses the child skill when

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

an agent triggers Email Reply Recommendation on a case record that belongs to the extended table.

Procedure

1. Navigate to > > **Admin** > **Now Assist admin** > **Skills**.
2. Select the **Customer** workflow and **CSM** as the product.
3. Locate the **Email Reply Recommendation** skill and select **Make a copy**.
4. In **General Details**, enter a name for the child skill that reflects the target case subtype.
   For example, enter **Email Reply Recommendation- Complaint**.
5. **Optional:** Enter a short description specific to this child skill.
6. Select **Save and continue**.
   The child skill is created and inherits the parent skill's configuration. You cannot change the table name of the copied skill in Now Assist Admin. Table selection is performed in Now Assist Skill Kit as the next step.
7. Navigate to **Now Assist Skill Kit** > **ServiceNow skills**.
8. Locate the copied skill you created earlier and open it.
9. Select **Choose Input** by clicking Edit Skill Input pencil icon available under Skill contents.
10. Select the child or extended table that this skill variant should apply to.
    For example, select **Complaint [sn_customerservice_complaint]** from input table drop-down.
11. Add one or more additional input fields from the selected table to include in the AI prompt.
    For example, add **Account**, **Additional comments**, or **Address**. These fields are appended to the base prompt inputs inherited from the parent skill.
12. Select **Save and continue**.
13. **Optional:** Select **Clone prompt** to edit the prompt.
14. Complete skill configuration in Now Assist Admin, by selecting **Define Availability** to set conditions for when this child skill is active.
    - Select **Skill is always available** to apply no restrictions.
    - Select **Customize skill availability** to define conditions using the condition builder.
15. Select **Define Access** to control which roles can use this child skill.
16. Toggle **Display** to make the skill visible in the in-product desktop for agents.
17. Select **Review and Activate** to review your configuration, then select **Done**.
18. Select **Activate** to turn on the child skill for agents.
    The Email reply recommendation child skill is active for the selected extended table. When an agent triggers **Email Reply Recommendation** on a case record that belongs to the configured child table, the platform automatically uses the child skill and its custom input fields to generate the email reply suggestion.

Configure sentiment analysis case

Configure Sentiment Analysis to evaluate case sentiment, trends, and reasoning from case inputs, helping agents resolve cases more efficiently.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: admin

Sentiment analysis is generated from the information that you enter in the following fields:

- Description
- Short Description
- State
- Priority
- Additional Comments

Any modifications to the names or labels of these fields can result in issues with sentiment analysis.

The Sentiment Reasoning field in the record provides details on which factors were considered for reasoning. This includes:

- Exact tone in the given inputs.
- Feedback in recent comment.
- Task priority.
- SLA consideration.

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Sentiment analysis case** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Define Trigger** and edit the job schedule period to configure how often the skill will be implemented.

   To enable a scheduled job for a custom table, follow these steps:

   a. Navigate to **All** > **System Definition** > **Scheduled Jobs**.

   b. Search and select **Sentiment analysis scheduler job CSM**.

   c. Replace the table name sn_customerservice_case with the name of your custom table in the script.

   d. Select **Update**.
5. Select **General details** and edit name and description of the skill.
   Additional information regarding details of the skill are displayed, but cannot be edited.
6. Select **Choose Input** and review the tables and fields to create prompts that determines where data is pulled from.

   Note:
   You cannot modify the input data source.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table 1: Inputs for the sentiment analysis skill

Input	Description
Input table	Case [sn_customerservice_case]
Input fields	○ Description ○ Short Description ○ State ○ Priority ○ Additional Comments

7. Select **Role attribution**

Note:
You cannot modify the input data source in base system.

Table 2: Inputs for the sentiment analysis skill

Input	Description
Input table	Case [sn_customerservice_case]
Requestor fields	○ Consumer ○ Contact ○ Created by ○ Opened by

8. Select **Define Availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
9. Select **Enable dashboard** to see sentiment analysis across cases.
10. Select **Define access** to determine who can access this skill.

    By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

    Default and Custom Roles:

    - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
    - If custom roles were added before the upgrade, they'll be updated automatically by a script.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

  Note:
  In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

11. Toggle to determine if chat recommendation appears in In-product desktop, displaying Now Assist skills on forms and workspaces.
12. After selecting **Review and Activate** to examine changes, select **Done** to close the Sentiment Analysis generation settings.
13. Select **Activate** to turn on the skill for agents and complete the configuration.

Trouble?
Troubleshooting information:

- Ensure that CSM/FSM Configurable Workspace Foundation plugin version is 25.1.4
- To access the Sentiment field, refer to the information available at these KB links:
  - Sentiment analysis card is missing in case records in both CSM UI16 and workspace UIs upon Now Assist CSM Sentiment Analysis feature activation.
  - Sentiment analysis card display on a record in CSM workspace

Change an insight to use a different field for sentiment analysis

Change a sentiment analysis insight to display sentiment data from a different field, such as changing from channel to consumer, requiring updates to both the UI Builder component and Now Assist Skill Kit.

Before you begin

Role required: admin or maint

General ServiceNow platform knowledge is required for this procedure.

About this task

For sentiment analysis insights, changing the field requires modifications to both the UI Builder component and the associated Now Assist Skill Kit skill. It involves cloning components, creating new skills, and modifying scripts. This procedure ensures proper configuration of the sentiment analysis insight with a different field.

The different UI Builder Component names for Sentiment analysis dashboard are OOB Sentiment Analysis Dashboard, Sentiment Over Time Visualization, Sentiment Breakdown Visualization, Sentiment Top Drivers Insight (Negative sentiment and Positive sentiment drivers), Sentiment by Assignment Group Insight, Sentiment After Escalation Insight, Sentiment by Channel Insight.

Procedure

1. Navigate to **All** > **UI Builder**.
2. Under **Components** tab search for the corresponding component.

   For example, open **Sentiment by Channel Insight**. Make a clone if needed.

3. Duplicate **Sentiment by Channel Insight**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Rename all components to your desired field (for example, Consumer) or create a generalized component name.

   Update the following:

   - UIB component name (in Settings) and **Save**
   - Stylized text title (in Editor)

5. In the **Get Sentiment by Field Data resource**, change the **Field(s)** value to your desired field ID.
   For example, consumer.
6. In a new tab or window, navigate to **All** > **Now Assist Skill Kit**.
7. Under **ServiceNow skills**, search for **Sentiment by Channel Insight**.
8. Select **Clone** to clone the skill under your desired field name.
9. Under the **Tool editor**, select **SentimentChannelScript** and open the tool.
10. Replace every instance of the existing field (contact_type) with your desired field (consumer).
11. Select **Continue** till the **Edit script tool** guided set up reaches summary page.
12. Select **Save changes**.
13. In the **Prompt editor** tab, replace every instance of "channel" except the very last occurrence in {{SentimentChannelScript.output}}.
14. Select **Finalize prompt**.
15. **Publish** the prompt.
16. Navigate to the sys_one_extend_capability table and find the record corresponding to the Now Assist Skill Kit skill you just created.
    Right click to copy the sys_id.
17. Return to the UI Builder page and in the **Get Sentiment Insight by Capability ID** data resource, paste the copied sys_id from previous step into the **Capability ID** field.
18. Select **Save**.
    Now add the newly created component to any base system dashboard page or your own custom page, using other nearby insights as reference for the correct event handler and optimization setup.
    The sentiment analysis insight now uses the specified field to display data and the associated Now Assist skill has been properly configured.

Configure Suggested Steps Generation

Configure suggested steps generation to analyze clusters of similar cases and suggest next steps for case resolution for accelerated and consistent agent case troubleshooting.

Before you begin

Role required: admin

Suggested steps are generated from the records identified based on the information that you enter in the following fields:

- Short Description
- Edited Conditions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Suggested Steps Generation** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Choose Inputs** and review the tables and fields to create prompts that determines where data is pulled from.

   Note:
   You cannot modify the input data source.

   Inputs for the suggested steps generation skill

Input	Description
Input table	Case [sn_customerservice_case]
Input fields	○ Short description ○ Edited Conditions: Edit the conditions to update the filter and ensure that only relevant and up-to-date records are used.

5. Select **Record Clustering** to group records by similarity based on the adjusted inputs in the previous step.

   Note:
   Record clustering allows you to add the job in the queue, providing you with the ability to leave the page while the task is running in the background. You will be notified when the task is complete.

6. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

     Note:
     In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

   - For customizing access control, see Customize access control for suggested steps

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Toggle **Display** to determine if suggested step recommendations appear in In-product desktop, displaying Now Assist skills on forms and workspaces.
8. After selecting **Review and Activate** to examine changes, select **Done** to close the Suggested Steps Generation settings.
9. Select **Activate** to turn on the skill for agents and complete the configuration.

Make suggested steps available on CSM Workspace

Learn how to enable the suggested steps generation in the CSM Workspace after skill activation.

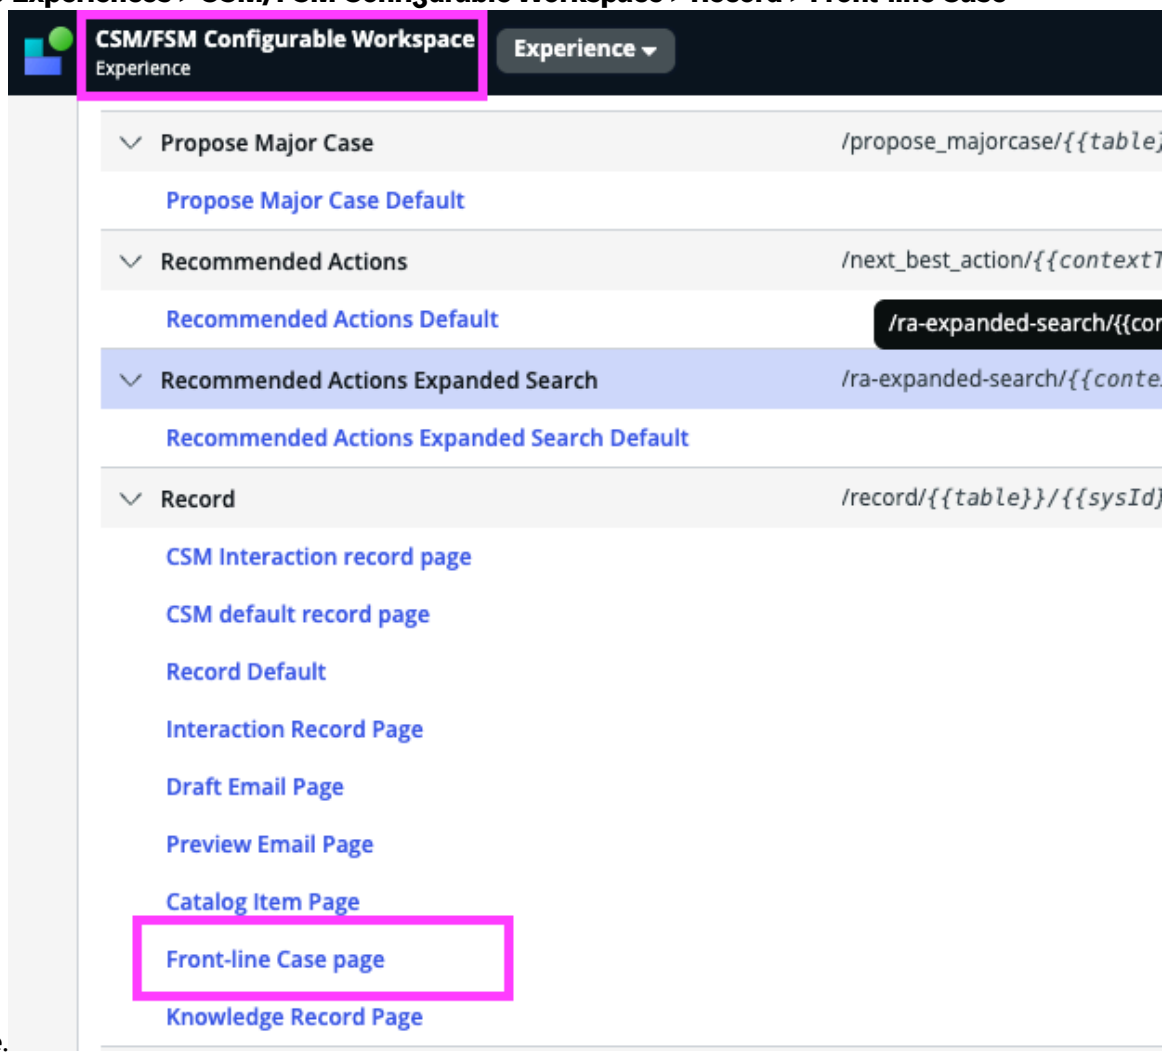
Before you begin

Role required: admin

After activating the Suggested steps generation feature in the Now Assist Admin console, follow the steps outlined to make the skill available in CSM Configurable Workspace.

Procedure

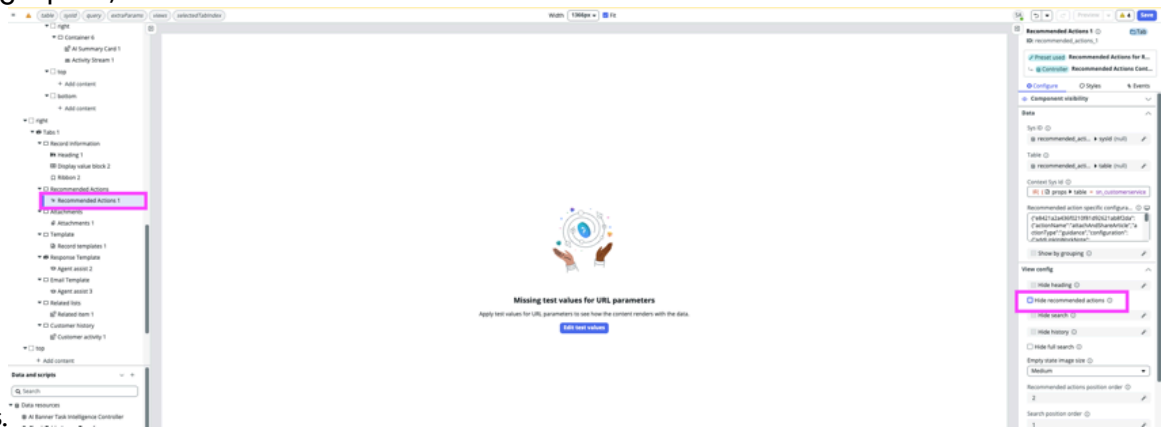
1. Navigate to **All** > **UI Builder**.
2. Go to **Experiences** > **CSM/FSM Configurable Workspace** > **Record** > **Front-line Case Page**.



3. In the left content navigation pane, scroll down and select **Recommended Action 1**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the right pane, clear the checkbox **Hide recommended actions**.



5. Select **Save** to apply the changes.

Result

Recommended Actions will be displayed in the CSM/FSM Configurable Workspace and you can see the Suggested steps generation skill under it.

Customize access control for suggested steps

Replace the default sn_customerservice_agent or sn_customerservice.consumer_agent role with a custom role.

Before you begin

Role required: admin

Procedure

1. Update role permissions
   In the sys_user_role table, open your custom role and add sn_gaf.data_writer to the Contains Role related list.
2. Update ACLs
   In the sys_security_acl table, filter for ACL names starting with gaf_suggested_steps_csm. Add your custom role to each of the four matching records.
3. Configure skill access
   In Now Assist Admin, complete the setup for the CSM Suggested Steps Generation skill:
   - Add your custom role in the **Define Access** step.
   - Add the same role in the **Select Display** step.

Result

By default, the sn_customerservice_agent and sn_customerservice.consumer_agent role is used. These steps allow you to configure a custom role if needed.

Configure Sidebar Summarization

Configure sidebar summarization to generate summaries of sidebar discussions for quick agent understanding, allowing for faster collaboration.

Before you begin

Role required: admin

Sidebar summarization is generated from the information within selected tables containing specific case, incident, or interaction information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate Skill for the **Sidebar Summarization** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **Define triggers** and switch the toggles to choose how and when the summarization is configured.

Table 1: Triggers for the sidebar summarization skill

Trigger	Description
Quick action	Sidebar summary that is generated when the live agent performs the `/summarize` quick action.

You can also select toggle a property that controls how a sidebar summary is displayed.

Table 2: Property for the sidebar summarization skill

Property	Description
Bulleted list	Sidebar summary as an unordered list.

5. Select **Choose tables** to select the tables from which summaries for Sidebar discussions are generated.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they'll be updated automatically by a script.
   - If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

   Note:
   In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

7. Toggle **Select display** to determine if sidebar summarization appears in In-product desktop, displaying Now Assist skills on forms and workspaces.
8. After selecting **Review and Activate** to examine changes, select **Done** to close the sidebar summarization generation settings.
9. Select **Activate** to turn on the skill for agents and complete the configuration.

Configure Case Summarization

Configure case summarization to generate and display case summaries for agents and control who can access them in production.

Before you begin

Role required: admin

Case summarization relies on a base input table and its associated field inputs with descriptions to provide the context for a generated summary. Choose your base table, and view the associated base input fields within the provided input templates. Record state determines which input template is used when generating a summary.

Provided input templates:

- Case new
- Case work in progress
- Case resolved

Any modifications to the names or labels of the fields within these templates can result in issues with notes generation.

Procedure

1. Navigate to **Admin > Now Assist Admin > Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate skill for the **Case summarization** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **General details** and edit name and description of the skill.
   Additional information regarding details of the skill are displayed, but can't be edited.
5. Select **Choose Input** and review the tables and fields to define the prompts that determine where data is pulled from.

   You can modify the rule conditions to determine when the input template is used. Additional data sources can be added via related tables as well.

Table 1: Inputs for the case summarization generation skill

Input template data	Base input field
Base input fields	○ Description ○ Short description ○ State ○ Work notes ○ Additional comments
Listed rule conditions to the input table	Default is determined by record state.
#1 Additional data source: Related table	○ Task SLA -> Task ○ SLA definition ○ Stage ○ Breach time
#2 Additional data source: Related table	○ Case -> Parent ○ Number ○ Short description ○ State ○ Assigned to ○ Additional comments ○ Work notes
#3 Additional data sources	Activity is listed as 'Email.'

6. Select **Customize prompt** to evaluate the generated outputs of case summaries.
   Evaluate the prompt used for each of the input templates by selecting an existing record to test the output. The review and modify the prompt after evaluating the output results, edit it within the Now Assist Skill Kit.
7. Select **Define availability** to customize how and when the skill capability is active and accessible.
   - Select **Skill is always available** so no restrictions are placed on when a skill is available.
   - Select **Customize skill availability** to define conditions and use the condition builder to configure fields and values.
8. Select **Define triggers** to determine how the skill will be triggered.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Automatic** to see the case summary of a record automatically generated when the user lands on a record page.
- Select **User trigger** to create a case summary of a record when the user opens a record page and selects the **Summarize** button.

9. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you are controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent automatically appear in **Define access** and **Select display**.
   - If custom roles were added before the upgrade, they're updated automatically by a script.
   - If new roles are created after the upgrade, you can manually add them in both the **Define access** and **Select display**.

   Note:
   In the **Select display** step, you can only choose roles that were added in the **Define access** step. If you add a role in **Define access**, you still must manually select it in **Select display** to make it active.

10. Select **Display** to determine where the skill appears.
    - Select **In-product desktop** to display Now Assist skills on forms and workspaces. Then, select the roles for whom the skill will be displayed.
    - Select **Now Assist panel** to display Now Assist skills in the Now Assist panel.
11. After selecting **Review and activate** to examine changes, select **Done** to close the case summarization generation settings.
12. Select **Activate** to turn on the skill for agents and complete the configuration.

Summarize a call by using Now Assist for Customer Service Management (CSM)

Configure activity response generation

Set up the activity response generation skill in the Now Assist Admin console to enable automated responses in comments and work notes.

Before you begin
Role required: admin

About this task
Use the Now Assist Admin console for configuring the activity response generation skill by selecting inputs, defining access, and activating the skill.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
   Access the skills configuration page.
   Verify you have admin role.
2. Select the **Customer** workflow and choose **CSM**
   This determines the product context for the skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workflow and product must match your configuration requirements.

3. Activate skill for the activity response generation skill.
   Each skill has a guided setup with multiple steps.
   A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **General details** and review name, description and details of the skill.
   Additional information regarding details of the skill are displayed, but can't be edited.
5. Select **Choose Input** and review the input tables and fields to create prompts that determine where data is pulled from.

   Note:
   You can't modify the input data source.

   Inputs for the Activity response generation skill

Input	Description
Input table	Case [sn_customerservice_case]
Input fields	Description, Short Description, Additional comments, Work notes, State, Priority.#

6. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

   Default and Custom Roles:

   - If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent automatically appear in **Define Access** and **Select Display**.
   - If custom roles were added before the upgrade, they're updated automatically by a script.
   - If new roles are created after the upgrade, you can manually add them in both the **Define Access** and **Select Display**.

     Note:
     In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still must manually select it in **Select Display** to make it active.

7. Toggle **Select display** to determine if activity response generation skill appears in In-product desktop, displaying Now Assist skills on forms and workspaces.

   Additionally, verify the sn_customerservice_agent and sn_customerservice.consumer_agent role(s) you configured in the previous step.

8. Select **Review and Activate** to review the settings.
9. Select **Activate** to turn on the skill for agents and complete the configuration.
   Skill is activated for agents and a success modal shows up with the option to **Return to CSM** and to **Go to Now Assist content menu**.

Configure trending topics dashboard

Configure the trending topic dashboard to identify clusters of related records, visualize their volume and sentiment over time, and leverage AI-generated insights to proactively resolve issues and improve operational efficiency.

Before you begin

Role required: admin

Trending topics dashboard is generated from the information that you enter in the short description field.

> **Note:**
> Any modifications to the names or labels of these fields can result in issues with trending topics in the dashboard.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate skill for the **Trending topics dashboard** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **General details** and edit name and description of the skill.
   Additional information regarding details of the skill are displayed, but can't be edited.
5. Select **Cluster Input** and review the tables and fields to create prompts that determine the source from which the data is pulled.
   You can't modify the input data source.

Inputs for the trending topics dashboard skill

Input	Description
Input table	Case [sn_customerservice_case]
Input fields	Short description

6. Select **Record clustering** to group records by similarity based on the adjusted inputs in the previous step.
   Record clustering enables you to add the job in the queue, providing you with the ability to leave the page while the task is running in the background. You are notified when the task is complete.
7. Select **Define access** to determine who can access this skill.

   By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Default and Custom Roles:

- If no changes are made, the default role sn_customerservice_manager automatically appear in **Define Access** and **Select Display**.
- If custom roles were added before the upgrade, they're updated automatically by a script.
- If new roles are created after the upgrade, you can manually add them in both the **Define Access** and **Select Display**.

> **Note:**
> In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still must manually select it in **Select Display** to make it active.

8. Toggle **Select display** to determine if trending topics dashboard skill appears in In-product desktop, displaying Now Assist skills on forms and workspaces.
9. Select roles for whom trending topics dashboard are displayed.
   The user roles added in the **Define access** step for each ACL(access control list) can be selected in this step.
10. After selecting **Review and Activate** to examine changes, select **Done** to close the activity response generation settings.
11. Select **Activate** to turn on the skill for agents and complete the configuration.
    Skill is activated for agents.

View trending topics dashboard

Add a new filter

Add a new filter to a UI Builder dashboard to enable users to refine data views based on additional fields such as consumer, product, or other custom fields.

Before you begin

Role required: admin or maint

If the Components tab in UI Builder is not available, run provided background script to enable the component view for maint users.

```
var gr = new GlideRecord('sys_properties');
gr.setValue("sys_scope", "e9b68250cdffe4e1c64e494026ec6e9a");
gr.setValue("name", "sn_cb_experiences.uib.enable.cb");
gr.setValue("write_roles", 'maint');
gr.setValue("value", "true");
gr.insert();
```

About this task

Filters allow users to refine dashboard data by specific fields. This procedure demonstrates how to add a new filter to any base system dashboard such as trending topics dashboard or sentiment analysis dashboard by duplicating and configuring an existing filter carousel item.

Procedure

1. Navigate to **All** > **UI Builder** and select a UIB component.
2. Under **Components** tab search for the corresponding component.

   The different UI Builder Component names:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Trending topics dashboard: OOB Trending Topics Dashboard, Top Trends, Trending topics by Field Insight (accounts, products, assignment group, channels), OOB Topic Details Dashboard, Topic Over Time Visualization, Topic Breakdown Visualization, Topic Affected Regions Visualization.
- Sentiment analysis dashboard: OOB Sentiment Analysis Dashboard, Sentiment Over Time Visualization, Sentiment Breakdown Visualization, Sentiment Top Drivers Insight (Negative sentiment and Positive sentiment drivers), Sentiment by Assignment Group Insight, Sentiment After Escalation Insight, Sentiment by Channel Insight.

If working with the base system component, create a clone before making modifications.

3. Select a **Filter Carousel Item 2** in the component tree.
4. Duplicate the component from the context menu.
   Drag the duplicated filter to reorder it as needed within the carousel.
5. Select the newly created filter in the left panel.
   The configuration panel displays on the right side.
6. Under **Filter source**, change the **Table** name to **Trending topic record**.
7. Change the **Field** to your desired field.
   For example, enter **Consumer**.
8. Select **Apply**.
9. Under **UI element**, change the **Filter label** field to match your desired field name.
   For example, enter **Consumer**.
10. Rename the component ID to match the field using lowercase and dashes.
    For example, enter **filter_consumer**
11. Copy this ID to the clipboard for use in subsequent steps.
12. Select **Apply**.
13. Select **Save**.
14. In the top left of the screen, open the hamburger menu and select **Open component record**.
15. In the **Composition** section, search for your component ID.
16. Open the search function using Cmd+F (Mac) or Ctrl+F (Windows).
17. Paste the component ID from step 10 using Cmd+V (Mac) or Ctrl+V (Windows).
18. Press Return (Mac) or Enter (Windows) to search.
19. Open the search function again using Cmd+F (Mac) or Ctrl+F (Windows).
20. Enter **filterId** in the search box.
21. Press Return (Mac) or Enter (Windows) to perform the search.
22. Locate the **value** field under the filterId property.
23. Change the final value to the filterId from step 10.

    For example, enter **filter_consumer**. The filterId can be any unique value.

24. Select **Update** to save.
    The new filter is now configured and ready to use on the dashboard.

Result

The new filter appears in the dashboard filter carousel and enables users to filter data by the specified field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
If you plan to make additional changes to the original component, refresh the UI Builder component page to prevent losing the changes made in steps 6-10.

Related topics

Change graph visualization

Change an insight to use a different field for trending topics

Change graph visualization

Change a graph visualization to a different type within the same graph group, such as converting a horizontal bar chart to a vertical bar chart or an area chart to a line chart.

Before you begin
Role required: admin or maint

About this task
This procedure allows you to change a graph to a different visualization type within the same group. The following are similar groups of graphs:

- Scores: Single score, Dial, Gauge
- Time series: Area, Column, Line, Scatter, Spline, Step
- Bars: Horizontal bar, Vertical bar, Pareto
- Pies and donuts: Donut, Pie, Semi Donut
- Multidimensional charts: Pivot table, Heatmap, Bubble

Tip:
Changing between graphs in the same group is very easy. For example, an area chart can be converted to any other time series chart such as spline, column, or line.

Procedure

1. Navigate to **All** > **UI Builder**
2. Under **Components** tab select the corresponding component that contains the graph you want to change.

   For example, open **Topic Over Time Visualization**.

   If needed, create a clone of the component before making changes.
3. Select the graph on the left panel that you want to change.
4. Locate the **Data visualization type** field.
5. Change the graph type to a different visualization within the same graph group.

   Important:
   Ensure the new graph type is within the same group as the original graph type. Converting across different graph groups is very difficult and may require significant programming changes.

6. Select **Save**.
   The graph visualization type is updated and displays data in the new format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Change an insight to use a different field for trending topics

Change the field used in a trending topics insight to display data from a different field, such as changing from Assignment Group to Consumer or Product.

Before you begin
Role required: admin or maint

About this task
For trending topics insights, it is simple to change the field being analyzed. This procedure allows you to duplicate an existing insight and modify it to use a different field while preserving optimization and formatting.

The different UI Builder Component names for Trending topics dashboard are OOB Trending Topics Dashboard, Top Trends, Trending topics by Field Insight (accounts, products, assignment group, channels), OOB Topic Details Dashboard, Topic Over Time Visualization, Topic Breakdown Visualization, Topic Affected Regions Visualization.

Procedure

1. Navigate to **All** > **UI Builder**.
2. Under **Components** tab search for the corresponding component.

   For example, open **OOB Trending Topics Dashboard**. Make a clone if needed.
3. Select **Insight Carousel Item 1** and duplicate it.
   Drag the newly duplicated component to reorder as needed.
4. Select the component within the carousel item and on the right-hand panel, change the field to your desired field ID.
5. Select **Save**.
   The insight now displays trending topics data based on the newly specified field.

Automated quality assurance

Configure the Automated quality assurance skill to generate quality assurance scores and feedback for closed cases through automatic review based on defined scoring criteria.

Before you begin
Role required: admin

About this task
Add, configure, review, and activate the Automated quality assurance skill, including parameters, display options, and availability checks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
In the base system, administrators can modify the display settings, role assignments, and add the custom parameters in the skill. All other fields are read-only. To customize additional settings, administrators must clone the skill first.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
2. Select the **Customer** workflow, and **CSM** as the product.
3. Activate skill for the **Automated quality assurance** skill.
   Each skill has a guided setup with multiple steps. A check symbol next to each step indicates whether its setup is complete, partially complete, or incomplete. After configuring a step, select **Save and continue** to move forward, or **Back** to return to a previous step.
4. Select **General details** and review the skill name and description.

   Note:
   You can't modify the input data source in the base system.

5. Select **Choose inputs** and review the input tables and fields to create prompts that determine where data is pulled from.
6. Select **Define scoring parameters** to review the parameters and categories used to calculate the quality assurance score.

   Note:
   In the base system, you can only edit weights and disable parameters. An admin can add custom parameters to a skill directly, without cloning it.

- Viewing Parameter Details
  a. Select any parameter to view its detailed scoring rubric. The rubric explains the evaluation criteria and scoring methodology for the parameter.
  b. Review the rubric to understand how interactions are scored for this parameter. The total weight across all the categories and parameters should add up to 100%. For example, If there are 9 categories and 21 parameters, having just one parameter turned on with 100% weightage meets the requirement.

List of parameters in base system

Category	Parameter	What it measures
Issue Understanding & Diagnosis	Root cause analysis	Agent identifies and explains the underlying cause — not just surface symptoms. Good agents explain why the problem occurred; weak agents restate what the customer said.
	Resolution completeness & actionability	Every part of the customer's question is addressed without gaps. Clear, step-by-step instructions the customer can follow immediately, matched to their technical level.
Communication Quality & Writing	Grammar & mechanics	No spelling errors, typos, grammatical mistakes, or punctuation problems. Measures basic writing correctness — not tone or style.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category	Parameter	What it measures
	Clarity & conciseness	Clear, direct language without jargon or redundancy. Good agents explain technical terms; weak agents ramble or write ambiguously.
	Tone & professionalism	Helpful, respectful tone even with frustrated customers. Good agents acknowledge concerns; weak agents blame the customer or use overly casual language.
	Formatting & readability	Response structured for easy scanning using numbered lists, bullets, and short paragraphs rather than walls of text.
Customer Empathy	Issue acknowledgment	Agent explicitly acknowledges the customer's concern or frustration early in the response before jumping to a solution.
	Personalization	Response uses the customer's name and references specific case or account details rather than a generic reply.
	Active listening signals	Agent paraphrases or references specific details from the customer's message, showing they absorbed what was said.
Knowledge Base Utilization	KB article sharing	Agent proactively shares relevant knowledge base articles or help docs with contextual explanations — not just generic links.
	Self-service enablement	Resources provided help the customer handle similar issues independently in the future.
	Proactive guidance	Agent anticipates related future issues and provides preventive information or best practices beyond what was explicitly asked.
First-Contact Resolution Intent	Complete resolution	Issue fully resolved in the first interaction without requiring follow-up. Good agents exhaust options within their scope before escalating.
	Information gathering efficiency	All necessary diagnostic info gathered upfront rather than asking piecemeal across multiple exchanges.
	Appropriate escalation	When escalation is needed, agent clearly explains why and sets realistic expectations for next steps and timeline.
Closing & Next Steps	Resolution confirmation	Agent confirms what was resolved and what happens next, rather than ending ambiguously.
	Timeline & expectations	Specific timelines provided for open or pending issues — not vague terms like "soon" or "as soon as possible."
	Professional sign-off	Polite, professional closing with a genuine offer to help with additional questions.

- Enabling or Disabling Parameters

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Locate the#**Active**#toggle or check box for the parameter you want to enable or disable.

b. Toggle the parameter status: Enable the toggle to activate the parameter in quality scoring and disable the toggle to exclude the parameter from quality scoring. When you disable a parameter, the system prompts you to redistribute its weight among remaining active parameters. Adjust the weights of other parameters to verify that the total equals 100%. Weight redistribution is required because all active parameter weights must sum to 100% for accurate scoring.

- Adjusting Parameter Weights

a. Select the weight field for any active parameter to edit it.

b. Enter the new weight value as a percentage.

c. Adjust weights for other parameters as needed to verify that the total equals 100%.

> **Note:**
> The system validates that active parameter weights sum to exactly 100% before permitting you to save changes.

7. Select **Define Availability** to review when the skill capability is active and accessible.
8. Select **Display** to activate the skill and make it visible in the In-product desktop for specific roles.

> **Note:**
> The skill appears on forms and workspaces. By default, the skill is available to customer service managers and customer service agents' roles. Admins can deactivate the skill to hide it from managers and agents during testing the configuration accuracy.

9. Assign roles that should have access to quality dashboards.
10. Select **Review and Activate** to check the default setup.
11. Select **Activate skill** to turn on the skill for agents and complete the configuration.
    Skill is activated for agents, and a success modal shows up with the option **Return to Now Assist skills.**

Copy Automated quality assurance skill

Use the make a copy feature to create a copy of the Automated quality assurance skill so that you can experiment with skill settings and configure it to fit your business needs.

Before you begin

Role required: admin or skill_manager

About this task

The skills that come with the Now Assist applications have default configurations that are optimized to serve the most common use cases. If you want to change the skill settings, you can edit a skill with the Now Assist admin console or you can create a copy of the skill. Creating a copy leaves the original skill configuration intact in case that you want to use it later or want to create another copy from the original. You can activate and configure the copies of the skills by using the same guided setup as the default skills. This process verifies that all skill settings, parameters, and configurations are properly replicated before activation.

> **Note:**
> In a default scenario, only one version of a skill can be active at a time. If you create and activate a copy of the skill, any previously activated version of the skill is deactivated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
   If you're already in the Now Assist admin console, select the **Now Assist Skills** tab.
2. In the navigation pane, select the **Customer** workflow, and **CSM** as the product.
3. On the feature card that contains the default Automated quality assurance skill, select **Options** icon .
4. Select **Make a copy**.

Note:

- For skill copy, admin can edit the name and description. Once the skill is copied, by default you see (Copy) as a suffix. Only one version of a skill can be active at a time. If you create and activate a copy of the skill, any previously activated version of the skill is deactivated.
- Cloning can also be done from Now Assist Skill Kit.

Result
A copy of the Automated quality assurance skill is generated, and you're taken to the guided setup.

What to do next
Continue the steps in the guided setup to activate the skill. For more information, see Activate Automated quality assurance skill.

Edit Automated quality assurance skill

Edit the configuration of the Automated quality assurance skill to choose the inputs or parameters and display the location of the skill output.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
   If you're already in the Now Assist Admin console, select the **Now Assist Skills** tab.
2. In the navigation pane, select the **Customer** workflow, and **CSM** as the product.
3. On the feature card that contains the default **Automated quality assurance** skill, select **View details**.
4. In the **All available skills** or **Active skills** section, select the **Options** icon next to the Automated quality assurance skill that you want to configure.
5. Select **Edit**.
   - The first step in the guided setup for Automated quality assurance skill is displayed.
   - Each skill configuration has a number of steps shown in the guided setup. The exact steps vary from skill to skill. A symbol next to each step indicates whether the step is completed, partially completed, or not completed.
   - Some configuration options are read-only.
6. Proceed to the next step when you have finished configuring the current step by selecting **Save and continue**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can return to a previous step by selecting **Back**.

7. Apply the new settings after reviewing your changes by selecting **Done**.

Result
The skill is activated with your preferred settings.

Edit a parameter in the base system

Update the weight of a parameter and enable or disable it.

Before you begin
Role required: admin

About this task
Use the parameter editor to modify the weight of a selected parameter. You can activate or deactivate the parameter, but all other details are read-only.

Procedure

1. In the **Define scoring parameter** step, select a parameter to edit.
   The parameter details appear in the edit panel.
2. Edit the Weight field.
   Enter a new numeric weight value to adjust the parameter's impact.
3. To enable or disable the parameter, select or clear the **Active** check box.
   Enabled parameters are included in scoring. Inactive ones are ignored.
4. Review the remaining fields.
   All other fields are read-only and can't be modified.
5. Select **Save**.
   You see an alert confirming that the parameter has been saved and updated.

Result
The parameter is updated with the new weight and activation status.

Add custom parameter to an existing custom category

Create and save a custom parameter within a category that supports custom parameters.

Before you begin
Role required: admin

About this task
Use this procedure to add custom parameter to an existing custom category. All fields in the form must be completed before saving.

Note:
You can't add custom parameters to the base system categories.

Procedure

1. In the **Define scoring parameter** step, select **Add new** > **Parameter** to add parameter.
2. In the pop-up window, select the radio button **Add parameter** to existing category.
3. Enter a **Category**.
   Only custom categories are available in the category drop-down. The error message is seen at field level as soon as the user types a parameter name that is the same as other parameters.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Fill in all the required form fields for the new parameter.
5. Select **Save**.

Result
The new custom parameter is added to the selected custom category. You get a confirmation message confirming the action.

Add custom parameter to a new category

Create a custom category and add a custom parameter to it.

Before you begin
Role required: admin

Procedure
1. In the **Define scoring parameter** step, select **Add new** > **Parameter** to add parameter.
2. In the pop-up window, select the radio button **Create new category & add parameter** to existing category.
3. Enter a category name and a short description.
4. Select **Next**.
5. Add new parameter details to the new category.
   The error shows at field level as soon as the user types the name that is the same as an existing parameter.
6. Select **Save**.

Result
The new parameter is added to the newly created category. You get a confirmation message that a new category and parameter are added.

Edit a custom parameter

Modify an existing custom parameter by editing it and resolving naming conflicts if needed.

Before you begin
Role required: admin

Procedure
1. In the **Define scoring parameter** step, select a custom parameter to open it for editing.
2. Edit any field as needed.
   For example, you can edit the **Exclusion criteria**. Parameters are grouped under categories. If the parameter name isn't unique, you see the error message: 'Parameter name exists. Choose a unique name.'
3. Select **Save**.

Result
The custom parameter is updated and saved successfully.

Add new category

Create a category by entering the required details and saving the record.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
Use this task to create category by entering all the required fields. Only applicable for Cloned skill. Admin isn't permitted to add category for the base system skill.

Procedure
1. In the **Define scoring parameter** step, select **Add new** > **Category**.
   The system displays the form for adding a category.
2. Enter a value in the **Name** and **Short description** fields.

   Note:
   The name must be unique. Duplicate names trigger a warning message.

3. Select **Save**.
   The system validates the new category information.

Result
If validation is successful, the category is added to the category list. If validation fails, the system displays error messages that must be corrected before saving again. The new category appears in the category list.

Edit custom category

Update the details of an existing custom category when changes are required.

Before you begin
Role required: admin

About this task
Use this task to edit an existing custom category. You can modify all category fields. Only applicable for cloned skill. The admin isn't permitted to edit a new category for base system skill.

Procedure
1. In the **Define scoring parameter** step, select a custom category to edit.
   The system opens the selected category record in a modal form.
2. Update the value in the **Name** field.
   The name must be unique. Duplicate names result in a warning message.
3. Modify any additional fields as needed.
   All fields in a custom category are editable. Verify that all changes conform with field-format requirements shown in the form.
4. Select **Save**.
   The system validates the updated category information.

Result
If validation succeeds, the category is updated in the category list. If validation fails, the system displays error messages that must be corrected before saving again.

Additional skill input and trigger information

Enable remaining generative AI skills within Now Assist for CSM, and reference summarized details to complete setup.

Overview of skills and triggers

Depending on the selected skill, you can configure inputs or triggers. These settings determine how and when a skill is used. An input identifies the data that is used for a skill, such as the table

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and fields that are used to generate a case summary. A trigger initiates an action, such as when the system generates a chat summary.

Sidebar discussion summarization skill

For the sidebar discussion summarization skill, select the triggers that determine when a sidebar discussion summary is generated.

The following table lists the triggers that determine when a sidebar discussion summary is generated.

Triggers for the sidebar discussion summarization skill

Trigger	Description
User triggered	Sidebar discussion summarization that is generated when the agent manually triggers the skill.

Case sentiment analysis skill

The case sentiment analysis skill includes the inputs and outputs that identify the table and fields that are used when a case sentiment is generated.

The following table lists the inputs for the case sentiment analysis skill.

Inputs for the case sentiment analysis skill

Input	Description
Input table	Case [Case]
Input fields	• Short description • Description • Priority • State • Task creation date • Activities • Task SLA

The following table lists the outputs for the case sentiment analysis skill.

Outputs for the sentiment analysis skill

Output	Description
Sentiment values	• Very positive • Positive • Neutral

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure service recommendations for interactions

Configure the service recommendations for interactions skill in the Now Assist Admin console to streamline case creation. This skill reduces cognitive effort, saves time, and promotes accurate case routing.

Before you begin
Role required: admin

About this task
Use the Now Assist Admin console for configuring the service recommendations for interactions skill by specifying the roles permitted to use the skill and the role restrictions.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills**.
   Access the skills configuration page.
   Verify you have admin role.
2. Select the **Customer** workflow and choose **CSM**
   This determines the product context for the skill.
   Workflow and product must match your configuration requirements.
3. Select **Turn on** to activate skill for the service recommendations for interactions skill.
4. Select **Add user access** to determine who can access this skill.

   Default and Custom Roles:

   - If no changes are made, the default roles `sn_csm_case_types.service_definition_viewer`and `sn_esm_agent` automatically appear in **Add user access**.
   - If custom roles were added before the upgrade, they're updated automatically by a script.
   - If new roles are created after the upgrade, you can manually add them in **Add user access**.
5. Configure role restrictions to define which data and resources the skill can access when invoked (default: `sn_csm_case_types.service_definition_viewer`).
6. Select **Turn on** to activate the skill.
   A screen appears showing **Successfully activated**.
7. Select **Back to skills** to return to the skills menu.

What to do next
Clone the skill to ground it in your environment for your specific needs.

Customizing a Now Assist for CSM skill

Now Assist Guardian CSM filters

Activate base system Now Assist Guardian CSM filters to automatically detect sensitive content in case conversations using the emotional tone of the message.

Before you begin
Role required: admin

- Now Assist for CSM must be enabled in your environment.
- Virtual Agent must be configured with topics for handling sensitive content scenarios.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Guardian filters analyze case conversation content using Now Assist's sentiment analysis engine and detect sensitive or high-risk content. When a filter detects content matching its configured criteria, it redirects the user to a Virtual Agent topic to handle that type of sensitive issue. Now Assist Guardian filters for CSM identify cases that contain sensitive content such as data breaches, legal threats, or reputational risks. By activating these filters, you can confirm that cases involving critical issues are flagged and handled appropriately, reducing response times and improving risk mitigation.

Filter name	What it detects	Example use case
Active Data Loss or security breach- Refers to issues related to security incidents that can put sensitive data at risk. It can include questions about ongoing security incidents, confidential information, or personally identifiable information.	Content indicating unauthorized data access, data ex filtration, or active security incidents	Customer reports that their account credentials were exposed in a third-party breach
Threatening legal action- Refers to issues that may arise in business-to-business or business-to-customer interactions related to legal action. It includes any threats to sue and questions related to past and present litigation.	Language suggesting the customer intends to pursue legal remedies or regulatory complaints	Customer states they will contact their attorney or file a complaint with regulatory authorities
Reputational incident/issue- Refers to issues related to the reputation of either the service provider or the customer. It includes any content that could be perceived as harmful to the reputations of either party.	Content that could damage the organization's public image or brand reputation	Customer threatens to share negative experiences on social media or with industry publications

Procedure

1. Navigate to `https://<instance-name>.service-now.com/now/now-assist-admin/filters`.
2. Locate the filter you want to activate in the filter list.
   There are 3 filters available- **Active Data Loss or security breach**, **Threatening legal action**, **Reputational incident/issue** to choose from.
3. Select **Activate**.
4. In the **General details** step, review or edit the filter name and description if needed.
   - **Filter name**: The display name shown in the admin interface
   - **Description**: Explanation of what the filter detects
   - **Filter group**: Edit priority order for the filter in each given filter group it belongs to
5. Select **Save and Continue**.
6. In the **Sample phrases** step, add example phrases that the filter should detect.
   - Enter phrases that represent the type of content you want to identify.
   - Add multiple sample phrases to improve detection accuracy.
7. Select **Save and Continue**.
8. In the **Applicability** step, select which Virtual Agents this filter applies to.
   You can apply the filter to one or more Virtual Agent configurations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Select **Save and Continue**.
10. In the **Filter topic** step, review the Virtual Agent topic that users will be redirected to when sensitive content is detected.

    Tip:
    Select **Preview topic in Virtual Agent** to customize the redirect topic in Virtual Agent Designer.

11. Select **Save and Continue**.
12. In the **Review and activate** step, review all configurations.
13. Select **Activate** to enable the filter.

Result

The filter is now active and will detect sensitive content in case conversations for the selected Virtual Agents. When matching content is detected, users are redirected to the configured Virtual Agent topic.

What to do next

Test the filter by creating a test case with sample phrases that should trigger detection. Monitor filter performance and adjust sample phrases as needed to improve accuracy.

Now Assist Guardian

Banners in Now Assist for Customer Service Management (CSM)

Banners display information about generative AI skills and the form fields that are generated or predicted by the those skills.

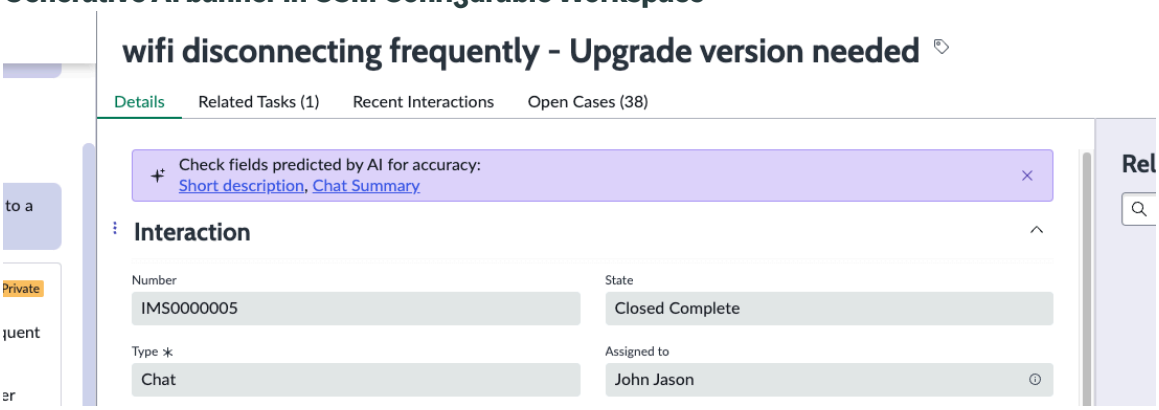
Overview of banners

The generative AI banner displays information about the fields on a form that are generated or predicted by the skills available with Now Assist for CSM. Messages that appear in the banner:

- Alert agents when fields are being generated or predicted and when the process is complete.
- Remind agents to review the information in these fields.
- Inform agents if fields cannot be generated or predicted.

Messages also include links to the fields that are generated or predicted by Now Assist for CSM.

Generative AI banner in CSM Configurable Workspace



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Links to generated or predicted fields

Messages displayed in the generative AI banner can include links to the fields that are generated or predicted by AI. For case records, this includes fields such as the case description and short description. For interaction records, this includes fields such as the short description and chat summary.

When an agent selects a link in the message, that field is highlighted on the form. If an agent modifies the field and saves the record, the link to that field is removed from the message. Restoring the field to the original value returns the link to the message.

Setting default record pages

A record page provides the base structure for how a record is displayed in CSM Configurable Workspace. When the system displays information in CSM Configurable Workspace, such as case records and interactions, it uses the pages that have been set as the default record pages.

Set the following pages as the default record pages in UI Builder:

- **CSM default record page**: Includes specific features for case management.
- **CSM Interaction record page**: Includes CSM-specific features for interaction management.

These pages support the Now Assist for Customer Service Management (CSM) functionality in CSM Configurable Workspace, including the display of the generative AI icon and banner. For more information, see Set record page order.

Configure the Propose Solution UI action and declarative action

Add generative AI-specific functionality to the Case form by configuring the Propose Solution UI action and declarative action that are included with the Now Assist for Customer Service Management (CSM) application.

Before you begin

Role required: admin

About this task

The Customer Service Management application includes a Propose Solution UI action that agents can use to propose a solution for a customer service case.

The Now Assist for Customer Service Management (CSM) application includes the following actions that provide generative AI-specific functionality. Agents can use these actions to propose solutions that include AI-generated resolution notes:

- Propose Solution declarative action: Generates resolution notes in CSM Configurable Workspace.
- Propose Solution UI action: Generates resolution notes in Core UI.

Note:
These actions are inactive by default.

To use the generative AI functionality, you must deactivate the Propose Solution UI action for Customer Service Management and then activate the Propose Solution UI action and declarative action for Now Assist for CSM. After being activated, these actions are available to customer service agents for assigned cases that are in the Open state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Deactivate the Propose Solution UI action for the Customer Service Management application.
   a. Navigate to **All** > **System Definition** > **UI Actions** to display the UI Actions list.
   b. Configure the list to show the Application column.
   For more information on how to configure a list, see Configure the list layout.
   c. Filter the list to display **Propose Solution** in the **Name** field.
   d. Select the Propose Solution UI action for the Customer Service application.
   e. Clear the **Active** check box.
   f. Select **Save**.
   The system returns you to the UI Actions list.
2. Activate the Propose Solution UI action for the Now Assist for CSM application to use this functionality in Core UI.
   a. From the UI Actions list, select the Propose Solution UI action for the Now Assist for CSM application.
   b. Select the **Active** check box.
   c. Select **Save**.
   The system returns you to the UI Actions list.
3. Enable the Propose Solution declarative action for the Now Assist for CSM application to use this functionality in CSM Configurable Workspace.
   a. Navigate to the **sys_declarative_action_assignment.list** to display the Action Assignments list.
   b. In the Action label column, select **Propose Solution**.
   c. Enable the **Active** check box.
   d. Select **Save**.
   The system returns you to the Action Assignments list.

Customize a case summarization skill in Now Assist for Customer Service Management (CSM)

If you have the admin role, you can customize a Now Assist for Customer Service Management (CSM) skill so that agents can use the generative AI skills in CSM Configurable Workspace and in Core UI.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

From the Now Assist Admin console, you can select the input table, related records, and fields for each input template of the case summarization skill, and then configure the prompt headers to include them in the general summary.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Features** to access the **Now Assist Features** tab of the Now Assist Admin console.
2. In the **Customer** workflow group, view the skills for the Now Assist for CSM features.
3. Activate and copy the Now Assist for CSM feature case summarization skill for customization.

   a. On the feature card that is associated with the skill that you would like to activate, select **View details**.

   b. In the All available skills section, locate the skill that you would like to activate and select **Activate skill**.

   Note:
   Only one version of a skill can be active at a time for each table. If you create and activate a copy of the skill, any previously activated version of the skill is deactivated. The copied skill can be activated with the parent skill.

   You can choose to make a copy of the skill before activating it.

   c. Select the More actions icon for the skill in the Active skills section, and create a copy that you can customize by selecting **Make a copy**.

   The copy that you make is listed in the Active skills section.

   d. Select the copied skill from the Active skills section to open it.
   A guided setup leads you through the configuration of the general details, input, prompt, availability, display, review, and activation of the customized skill. If you complete the entire walk-through, the case summarization skill is activated.

4. In the General details step, fill in the fields.
   For information about the inputs and triggers for each skill, see Additional skill input and trigger information.

   a. Enter a name and description for the skill.

   b. Select **Save and continue** to go to the next step.

5. View the input data for each skill, such as the base input fields and related lists for the different input templates (Case new, Case work in progress, or Case resolved states).

   You can change the base input table and add case extension tables for the copied skill. To create an extended table, select **New** on the Tables list page, and select the table to extend from the **Extends table** search field. This option is only available when you're creating a table, because it incorporates all of the fields of the original table and creates system fields for the new table.

   Configure the base input table fields and related lists for the different input templates (Case new, Case work in progress, or Case resolved states) for the skill.

   Each skill relies on a base input table and input fields with descriptions to provide context for the Now LLM Service to generate a response.

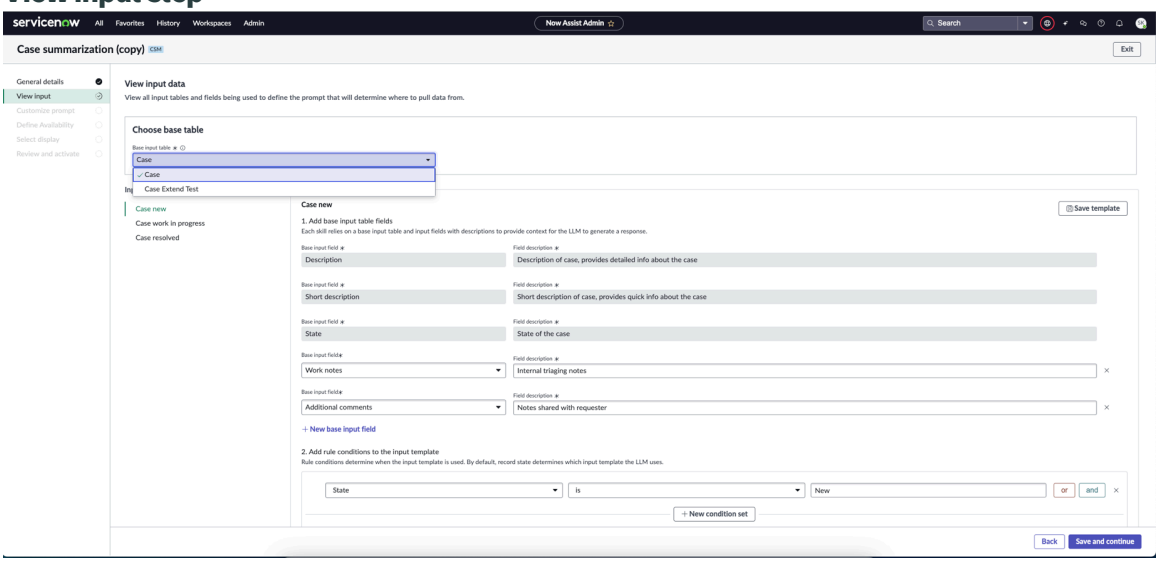
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select only those related tables that are offered as the base system as part of the input data.

a. For each input template state (New, Work in progress, or Resolved), select **+New base input field** and configure the base input table fields.

Add multiple base input fields, as necessary.

View input step



The following table lists the base input table fields and descriptions, including a relevant example.

Base input fields

Field	Description
Base input field	Field in the case table whose value this skill uses in its response. For example, `Short description`.
Field description	Description of the base input field value. For example, `Short description of case, provides quick info about the issue.`

b. For each input template state (New, Work in progress, or Resolved), configure the rule conditions by using the condition builder to filter the data.

The rule conditions determine when the input template is used. By default, the record state determines the input template that the Now LLM Service uses.

You can build the condition out further by selecting **+New condition set** and configuring additional parameters.

The following table lists the input template states.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Input template states

State	Description
New	State is New.
Work in progress	State is Work in Progress.
Resolved	State is Resolved.

c. For each input template state (New, Work in progress, or Resolved), select **+New data source** to configure the additional related table and activity stream data, as needed.

Adding input data sources, like the related tables and activity streams, provide more context to the Now LLM Service in a related list.

You can also add the rule conditions to these additional data sources.

The selection of the related table fields may have a direct impact on the quality of the corresponding prompt header. For example, if a prompt header requires a specific field from the related table, but that field isn't selected as input, the summary for that prompt header will contain missing information. For example, as a base case, you see one related table, such as a Service level agreement (SLA), that includes all the required fields and filtering conditions for the prompt header. The SLA prompt header is preselected to help you understand how the related table, its fields, and the prompt header work together to produce a summary. You can use the SLA as a reference to configure the other related tables to determine which fields to select and which description adds the requirements of their respective prompt headers. Apply any additional conditions to filter the data further.

d. Select **Save and continue** to go to the next step.

6. Customize the prompt.

Review and test the default prompt provided. The prompt is fixed and cannot be customized directly within this step or from the Now Assist Admin screen.

To customize or create new prompts, select **Edit prompt in** *Now Assist* **Skill Kit**. This will redirect you to the *Now Assist* Skill Kit, where you can manage prompt configurations for the skill. For more info, see Now Assist Skill Kit

a. For each input template state (New, Work in progress, or Resolved), select the prompt to include in the generated summary.

b. Select **Save** to continue to the test response.

c. Select a case record in the Test response section, and test the prompt response output format by selecting **Run Test**.

d. Select **Save and continue** to go to the next step.

7. Define how the skill is available to your users.

a. Configure the skill to be always available to users, or select conditions that must be met before the skill is available.
Selecting **Customize skill availability** displays a condition builder to filter the data further.

b. Select **Save and continue** to go to the next step.

8. Select **Define access** to determine who can access this skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

Default and Custom Roles:

- If no changes are made, the default roles sn_customerservice_agent and sn_customerservice.consumer_agent will automatically appear in **Define Access** and **Select Display**.
- If custom roles were added before the upgrade, they'll be updated automatically by a script.
- If new roles are created after the upgrade, you'll need to manually add them in both the **Define Access** and **Select Display**.

> **Note:**
> In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still need to manually select it in **Select Display** to make it active.

9. Configure where to display the case summarization.

   a. Select either **In-product** or **Now Assist panel**.

   - **In-product**: When selected, the Now Assist skills are displayed on the forms and workspaces.

     For the skills that appear in-product, select the down arrow to identify the roles that can use the skill.

   - **Now Assist panel**: When selected, the Now Assist skills are available in the Now Assist panel.

     If you don't see this option, you must activate the Now Assist panel. For more information, see Activate the Now Assist panel standard chat.

     For the skills that appear in the Now Assist panel, select the down arrow to identify the roles that can use the skill.

   b. Select **Save and continue** to go to the next step.

10. Review and activate the skill.
    Review your choices and select **Activate** to complete the skill customization.
    You can now select **Summarize** in a case to generate the case summary.

Domain separation in Now Assist for Customer Service Management (CSM)

Domain separation allows users to separate data, processes, and administrative tasks into logical groupings known as domains. Domain separation enables users to independently manage skill configurations, data visibility, and other settings within each domain.

Setting up domain separation for Now Assist for CSM involves requesting activation of a plugin, setting options, and assigning users and records to domains.

Domain separation is possible at the skill level and at the individual configuration level. When using the guided setup in the Now Assist Admin console, each configuration option has its own record that you can separate by domain. To create a record in a different domain, you must set up the skill in the scope of your preferred domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Global domain is the default domain, and all new domains are created under it. New domains inherit the settings from the global domain if users don't override the settings in the new domain.

Do the following task to set up domain separation:

1. Request domain separation. For more information, see Request domain separation.
2. Create a domain by creating an account for CSM
3. Configure skills in the domain for Now Assist for CSM.

More information

- Domain separation setup and administration. See Domain separation setup and administration.
- Benefits of domain separation. See Benefits of domain separation.
- Domain separation and Customer Service Management (CSM). See Domain separation and Customer Service Management.

Create a domain by creating an account for Now Assist for Customer Service Management (CSM)

Create a domain by creating an account in the account table in the Customer Service Management (CSM) application. By creating an account, you also create a domain. If you have the admin role, you can create multiple domains by creating different accounts as needed.

Before you begin

Role required: admin

About this task

Enable the *csm_auto_account_domain_generation* system property. This system property is installed with the CSM application and is available only after the domain separation plugin is active. When this property is enabled (the value is set to True), the CSM application automatically creates a domain of the same name when a new account is created.

> **Note:**
> Enabling this property doesn't add domains for existing accounts. It only creates the domains for new accounts. Adding domains for existing accounts requires a migration script.

When creating a domain, follow these general guidelines:

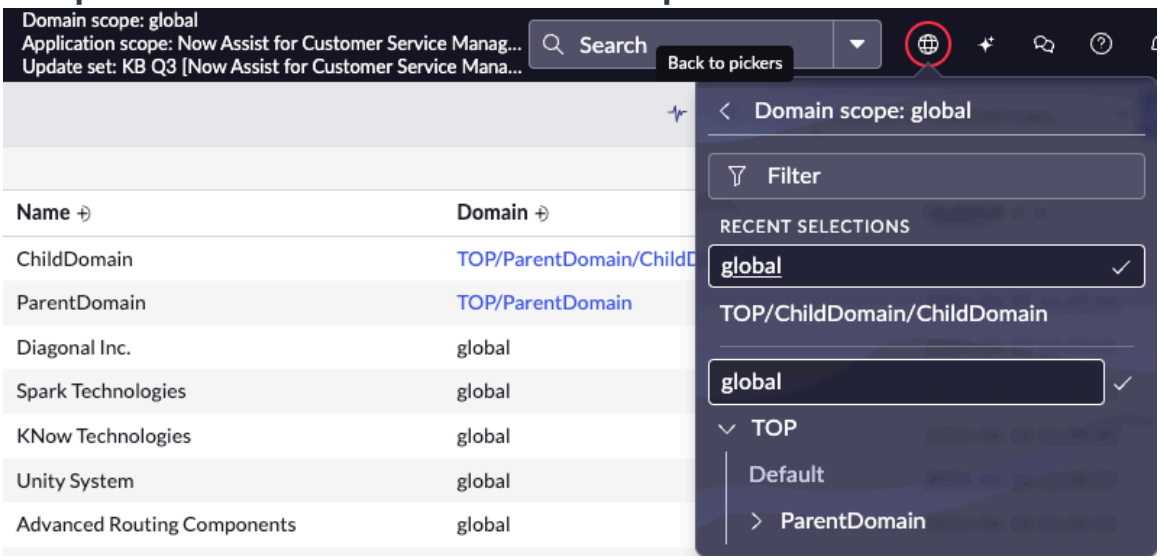
- Only one domain can be the default domain.
- Only one domain can be the primary domain.

Procedure

1. Change the current domain to the domain that you want by selecting the domain under the domain scope.
   For example, if you want to create a domain under the global scope that would inherit its settings by default, select the global domain in the domain scope. If you want to create a child domain under a specific parent domain, change the domain scope to that parent domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example of the different domains under domain scope



2. Navigate to **All** > **Customer Service** > **Customer** > **Accounts** or **All** > **customer_account.list**.
3. In the Accounts table, create an account by selecting **New**.
4. Create a domain with the same name as the account by selecting **Save**.

Different domain names

Number	Name	Domain
ACCT0010002	ChildDomain	TOP/ParentDomain/ChildDomain
ACCT0010001	ParentDomain	TOP/ParentDomain

For example, when you create an account named ParentDomain under the global scope, you also create a domain with the same name. All the domains that are created under the global scope will be under the TOP (top level) domain. If you create an account called ChildDomain within the ParentDomain domain, the domain with the same name is also created under the ParentDomain domain.

5. Navigate to **All** > **Domain Admin** > **Domains**.
   The domains can be viewed in the Domain table, or you can directly create a domain in the Domain table.

Domain form

Field	Description
Name	Unique name for the domain.
Type	Domain type that describes the domain. By default, the domain types are Vendor, Customer, and MSP. You can also add your own choices.
Primary	Option to select if this domain is to be the top-level domain in the hierarchy. The top-level domain only has child domains and no parent domains.
Default	Domain that is to be the default domain for your hierarchy.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Parent	Name of the domain that is higher in the hierarchy. This field must have a value for the domain to appear in the domain map.
Active	Option to make the domain available for use. You must select this option for this domain to appear in the domain map.
Description	Description for the domain.

Each domain record can also have several related records:

- Companies
- Contains Domains
- Contained By

6. Create a domain in the Domain table by selecting **New**.
7. Add the field values and select **Submit**.
   The domain has been created.
8. Create users in the Users table under each domain.
9. After adding the field values, select **Submit**.
10. Assign the appropriate roles and groups to the users.
    For example, if you create an Agent user in the ParentDomain, they have access to both the ParentDomain and ChildDomain. However, an Agent user that you create in the ChildDomain only has access to the ChildDomain.
11. Select **Save**.

What to do next

To change the domain hierarchy, go to the Contains Domains related list. Select the domain records that are the child (contained) domains of the contained relationship.

Configure skills in a domain for Now Assist for Customer Service Management (CSM)

Activate the skills with different skill configurations in each domain in the Now Assist for Customer Service Management (CSM) application.

Before you begin

Role required: admin

About this task

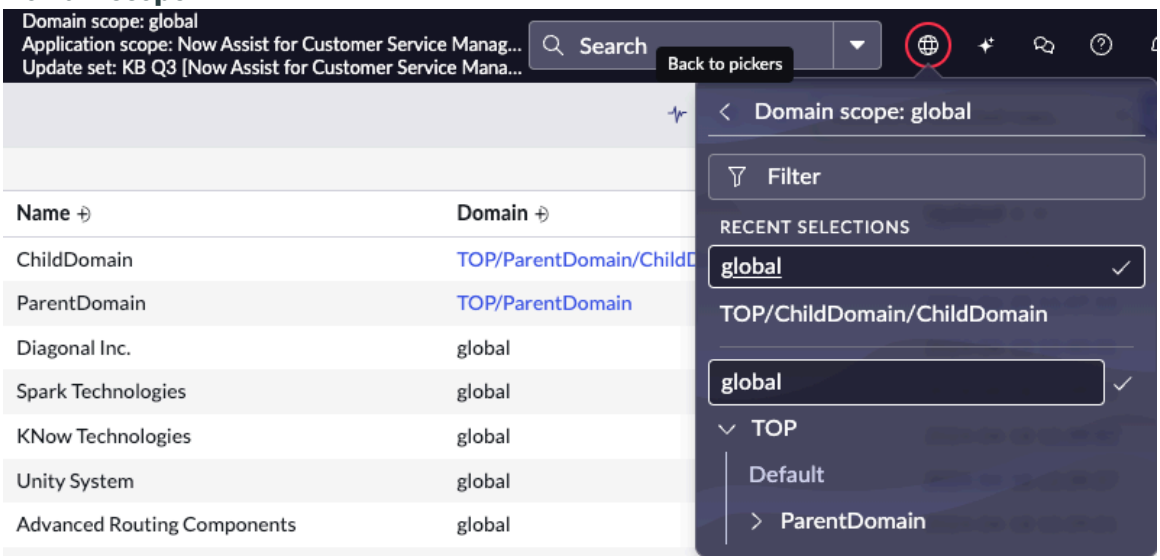
By default, the skill configurations in the domains inherit the settings from the global domain unless they're overridden by the new configurations in that domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Change the current domain to the domain that you want to activate the skills in by selecting the new domain.

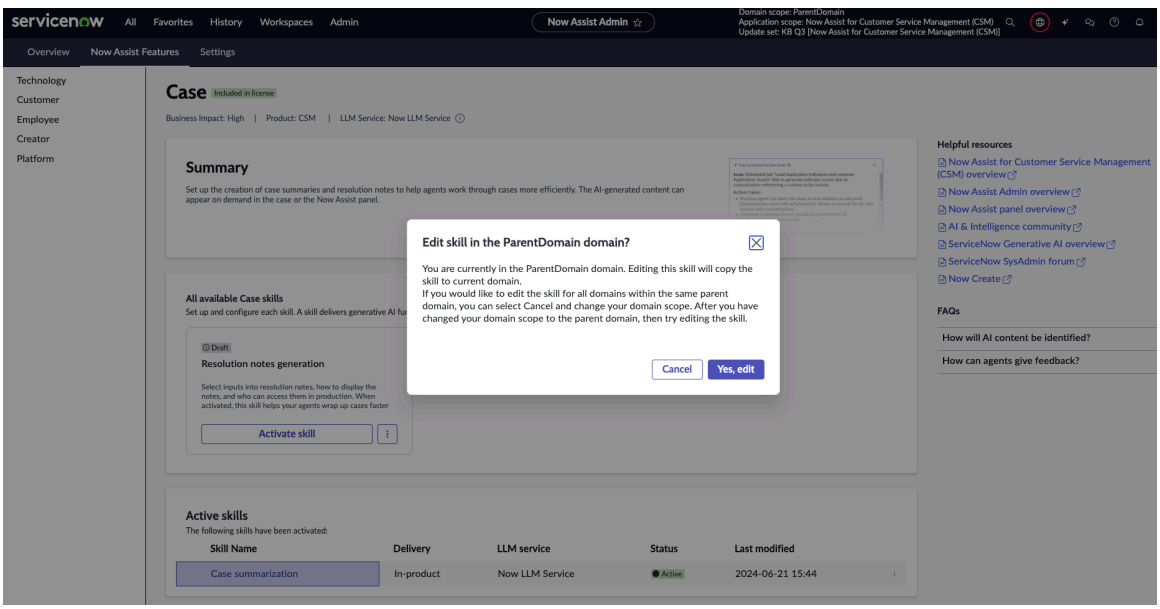
Domain scope



For example, if you want to configure the skill in ParentDomain, change the domain scope to ParentDomain.

2. Navigate to **All** > **Now Assist Admin Console** > **Features** > **Features**.
3. In the Now Assist Admin console, select the global skill configuration to activate it within the current domain and to set up its own unique skill configuration.
   As shown in the following example, a modal pop-up window confirms that the skill configuration is being edited in the current domain. This action creates a skill configuration that overrides the existing global configuration. The active skill configuration in use is derived from the global domain and shares the same name as the global skill configuration.

Edit skill in a domain



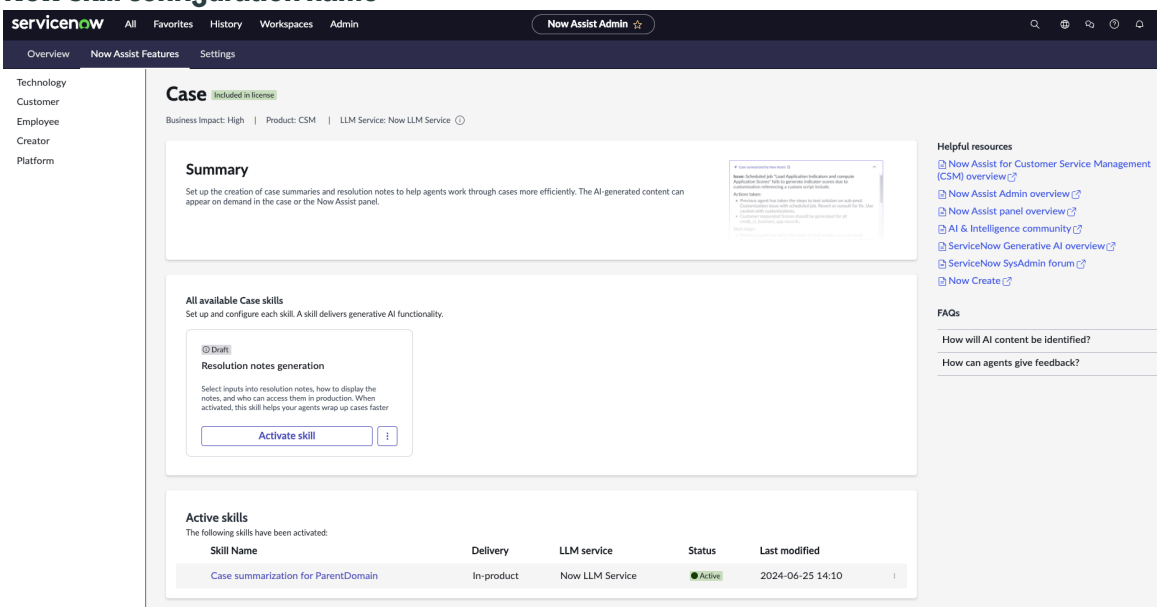
4. Proceed to the guided setup by selecting **Yes, edit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The configuration setup applies to the current domain and is inherited by its child domain. The name of the skill changes to <Skill Name> for <Domain Name>. For example, if the skill configuration - Case summarization for ParentDomain is activated, it overrides the global setting and applies to both the ParentDomain and ChildDomain. However, if the skill configuration Case summarization for ChildDomain is activated in ChildDomain, it only applies to ChildDomain.

Note:
The activation order must follow Global > Parent domain > Child domain to ensure a proper inheritance and overrides. If the child skill configuration in the child domain is activated before the parent domain, the parent skill configuration can't override the existing skill configuration in the child domain. Consequently, both the parent skill and the child skill remain active in the child domain and the result is a misconfiguration.

New skill configuration name



More information about domain separation for CSM can be found in Domain separation and Customer Service Management

Configure Now Assist for Customer Service Management (CSM) in Virtual Agent

Use Now Assist for CSM in Virtual Agent to provide users a content-driven generative AI experience.

Before you begin
Role required: admin

To ensure LLM-based appointment booking works in Customer Service Management, the following apps are required:

About this task
There are 6 main steps to configure Now Assist for CSM in Virtual Agent:

1. Activate Virtual Agent for Customer Service Management (CSM).
2. Configure Now Assist in Virtual Agent.
3. Install Conversational Appointment Booking.
4. Enable Walk-up Experience Appointment Booking.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Configure API credentials for OpenAI.
6. Enable Schedule a Walk-up Appointment topic in the Virtual Agent.

Procedure

1. Navigate to **All** > **Conversational interfaces** > **Virtual Agent** > **Designer**.
2. Locate and select **Schedule a Walk-up Appointment** topic under Now LLM.
3. Select the **Properties** tab.
4. Locate the check box labeled Now Assist for Virtual Agent under Select LLM assistant to make topic available.
5. Select **Save**.
6. Select **Publish**.

Result
The topic is available and active in the chat window.

Customize access control for conversational flows

You must define an access control list (ACL) for conversational flows. An ACL enables you to restrict who is able to access and execute a skill to only users with the correct role.

Before you begin
Role required: admin

The following flows include default ACLs for the sn_customerservice_agent and sn_customerservice.consumer_agent role:

- Add Comment to Task
- Add Work Note to Task
- Create Task for Case
- Reassign Case

Note:
An Access Control List (ACL) is already configured for these flows. The steps outlined below are only required if the customer intends to use these flows with a custom role.

To assign a custom role, follow the procedure:

Procedure

1. Navigate to **sys_security_acl** table.
2. Filter by these ACL names:
3. Add your custom role to each ACL record.

Clone the Now Assist for CSM skills

The clone feature enables you to create a copy of a Now Assist skill so that you can experiment with skill settings and configure the skill to fit your business needs.

Role required: admin

The skills that come with the Now Assist applications have default configurations that are optimized to serve the most common use cases. If you want to change the skill settings, you can

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

edit a skill with the Now Assist Admin console or Now Assist Skill Kit and you can create a copy of the skill. Creating a copy leaves the original skill configuration intact in case you want to use it later or want to create another copy from the original. You can activate and configure the copies of the skills by using the same guided setup as the default skills.

Use Now Assist Skill Kit to create and publish custom prompts and skills for Now Assist for CSM, including the cloned skills from Now Assist Admin console.

Unified Admin Experience for GenAI Skills:

- Previously, skills cloned in Now Assist Admin console could not be edited in Now Assist Skill Kit, creating a fragmented setup process. With the new unified admin experience, users can manage GenAI skills seamlessly in Now Assist Skill Kit. This includes adding necessary headers as input, configuring or editing prompts, and maintaining all settings in a single location.
- The unification migrates the Now Assist Admin console setup experience to Now Assist Skill Kit for all Now Assist for CSM cloned skills.

There are 2 ways to clone Now Assist for CSM skills:

1. Make a copy of a Now Assist skill from Now Assist Admin console.

   https://player.vimeo.com/video/996395898?h=e609c55303&badge=0&autopause=0&player_id=0&app_id=58479

2. Now Assist Skill Kit Clone from Now Assist Skill Kit.

   https://player.vimeo.com/video/985874233?h=2ccc18794b&badge=0&autopause=0&app_id=58479

Customizing a Now Assist for CSM skill

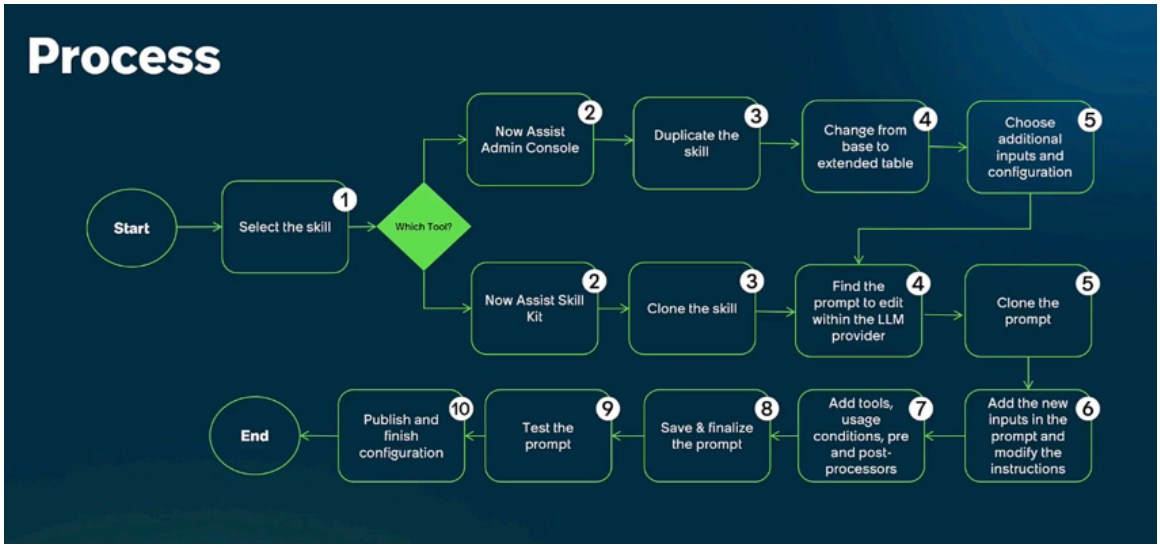
Learn how to access, activate, and customize a Now Assist for CSM skill using the Now Assist Admin console and Now Assist Skill Kit.

Role required: admin

Now Assist for CSM provides base system skills that can be tailored to meet specific business requirements. Customization ensures that skills align with your organization's workflows, data sources, and user roles. There are two main ways to customize:

- Using Now Assist Admin console: Modify base system skills, input configurations, and display settings.
- Using Now Assist Skill Kit: Build and publish custom skills for advanced use cases by customizing inputs and prompts, and then publish it. You can also use the Now Assist Skill Kit to clone base system skills, as long as they are the latest versions created after the release of the Now Assist Skill Kit.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Access and activate a skill in Now Assist Admin console

1. Navigate to **All** > **Now Assist Admin console** > **Skills**.
2. Select the Now Assist Skills tab.
3. Select **Customer** > **CSM**
4. Choose the skill you want to configure.
5. Select **Activate Skill**.
6. Go through the guided set up steps and activate the skill.
7. To customize the base system skills:
   a. Make a copy of the skill as you cannot directly modify the base system skill.
   b. Edit the copied skill's name so it is more descriptive for the LLM.
   c. Adjust input configurations by adding fields or creating a new data source.
   d. Test the skill with a sample record.

   Tip:

   - ISelect **Edit prompt in Now Assist Skill Kit** to edit the prompt in Now Assist Skill Kit.
   - You need the sn_skill_builder.admin role to edit the prompt in the Now Assist Skill Kit (NASK).
   - To edit a prompt, locate the prompt for the specified provider, clone it, apply the necessary changes, add pre or post processors and conditions as needed, finalize and publish the updated prompt, and then return to test changes on Now Assist Admin console.

   e. Customize how and when the skill capability will exist and be available.
   f. Choose how the skill will be triggered.
   g. Define who has access to this skill. Roles selected here will be available in the **Select display** step.
   h. Select where to display the skill- **In-product**, or in Now Assist panel.
   i. Under each display type, open the chevron and specify user roles by entering role names in the User roles field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

j. Review your choices and select **Activate** to complete the skill customization.

> **Note:**
> For more information, see Customize a case summarization skill in Now Assist for Customer Service Management (CSM).

Access and clone base system skills with the Now Assist Skill Kit

1. Navigate to **All** > **Now Assist Skill KIt**.
2. Under the **ServiceNow skills** tab, select the prompt you want to edit in Now Assist Skill Kit.

> **Note:**
> You need the sn_skill_builder.admin role to activate and customize the prompt in the Now Assist Skill Kit (NASK).

3. Create a clone for the selected skill by selecting the overflow icon
4. Enter a name, description and provider to clone the skill.
5. In the **Skill contents** pane, select the**Inputs** edit icon and add any inputs that you like to add to the prompt.
6. In the **Prompt** screen, select the edit icon and add the desired inputs to the prompt or Create a new prompt.
7. Test the prompt.
8. Evaluate the prompt.
9. Finalize and publish the skill from the Now Assist Skill Kit.

> **Warning:**
> Once finalized, you won't be able to edit this version of the prompt. You can always update and create a new version, or clone and create a new prompt.

10. Test the changes on associated records.
11. Activate it in the Now Assist Admin console and set display options.

> **Note:**
> This is not required for all skills.

Customize Now Assist context menu for skills

If you have the admin role, you can customize a Now Assist for Customer Service Management (CSM) skill so that agents can use the generative AI skills in CSM Configurable Workspace and in Core UI.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

The Now Assist context menu configuration is accessible through the Now Assist Experiences in Now Assist Admin console. After activating the relevant skills, users are prompted to visit the Case NACM Config however, in the base system , configuration is already active. By default, it is configured to use extended tables for the resolution notes and activity response generation skill that is provided in the base system.

Case NACM Config is currently only available for resolution notes and activity response generation skill.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Experiences**.
2. Select Now Assist context menu.
3. Open the **Configuration** tab to view all the existing configurations.
4. Find the configuration name **Case NACM Config**.
5. Under Action, select the icon
6. Select **Edit configuration**.
7. In the guided setup, go to **General details** and customize the table name.
8. Select the **Record form fields** for table form use cases.
   The form fields are active for close notes, additional comment and work notes.
9. Select **Save and continue**.
10. Select **Configure Experience**, to configure the actions for the context menu trigger button and dialog.

    There are separate configurations for close notes, additional comment and work notes. Default action configured is **Generate resolution notes**.

    a. Configure the **Actions** to **Generate resolution notes**, **Shorten** and **Elaborate**.

    b. Configure the **Refinement actions** to **Shorten** and **Elaborate**.

    c. Configure the **Actions for generated content** to **Insert**.
    In the preview you can see how the Now Assist context menu button will look like after configuration.

    By default, the **Enable support for extended tables** toggle is turned on and this configuration is shipped as active in the base system. This is to support sparkle on extended table on same field. Once the skill is active, this experience is available.

11. Select **Define access** to determine who can access this skill.

    By selecting specific roles, you're controlling who can use it. The roles you choose will also be available in the next step **Select display**.

    Default and Custom Roles:

    - If no changes are made, the default roles n_customerservice_agent and sn_customerservice.consumer_agent automatically appear in **Define Access** and **Select Display**.
    - If custom roles were added before the upgrade, they are updated automatically by a script.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If new roles are created after the upgrade, you can manually add them in both the **Define Access** and **Select Display**.

  Note:
  In the **Select Display** step, you can only choose roles that were added in the **Define Access** step. If you add a role in **Define Access**, you still must manually select it in **Select Display** to make it active.

12. **Select Display** to determine where to display the Case NACM Config.
    - Select In-product desktop to show Case NACM Config in all customer products on forms and workspaces.
    - Select roles for whom NACM config will be displayed.
13. In**Review and Activate** select **Activate** to activate Now Assist context menu for the skill.
    A record with the specific usage conditions can be selected from the dropdown to test the configuration.
    Now Assist context menu has been successfully activated.
14. Select **Return to Customer** to complete and save this section.

Set up Now Assist in the portal case form

Configure the Now Assist in portal case form to minimize case creation when a resolution already exists in the current knowledge base or external sources.

https://player.vimeo.com/video/1143919831?h=e548d4951c&badge=0&autopause=0&%E2%80%A6

Before you begin
Role required: admin

About this task
This configuration involves setting up the record producer, configuring related lists and variables, testing the configuration, and relating the catalog to the portal.

Procedure
1. Navigate to **All** > **Service Catalog** > **Catalog Definitions** > **Record Producers**.
2. Search and open the record producer **Create case for a product (Now Assist)**.
   The base system configuration details display.
3. Select **Copy** to duplicate the record producer.
   This creates a new version you can customize for your use case.
4. Enter a **Name**.
   This is the title the customers see in the portal.
5. Set the **Table name** to a specific case type.
6. Modify the **Short description** and **Description** to match your use case.
7. Scroll to review the variables list and update as required.
   For example, update the client scripts, change variables, add user criteria UI policies, and virtual agent topics and catalogs. You will find variables called **AI Search Assist** and **AI Genius Results** options in your configuration. Do not delete **Start**, **AI Search Assist**, **AI Genius Results Options**, and **Continue with Record Creation** to maintain the experience. These variables leverage the AI Search genius result widget found under AI Search Assist record producer configurations.
8. Select **Save** after completing all changes in the record producer configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Select **Try It** to preview the record producer.
10. Navigate to **All** > **AI Search** > **AI Search Assist** > **Record Producer Configuration** to edit the record producer configuration that we previously duplicated.
11. Select **New**.
12. On the **Record Producer Configuration** form, fill in the following fields.

13. Select **Submit**.
14. Navigate to **Service Portal** > **Portal** to connect the record producer to a catalog and Portal.
15. Search for the portal configuration and select it.
16. Scroll down to note the **Catalog** and **Taxonomy** topics.
17. Select the **Taxonomy** value.
18. Select a topic under **Child Topics**.
19. Select the **Enable AI Search** check box.
20. Select a pre-configured **Search Application** – CSM Portal Default Search Application.
21. Select **Update**.
22. Return to the record producer.
23. Edit the **Catalog** field to include the catalog we noted from the Portal settings.
24. Select **Assigned Topics** and add the relevant topic to ensure the record producer appears in the correct location of the portal.
25. Select **Save**.
26. Navigate to the Portal and under **Catalogs** verify that the record producer appears under the specified topic.

    Note:
    Ensure the catalog you related to the record producer is also related to the portal and fully published.

27. Navigate to the **Service Portals**.
28. Open the catalog and go to the record producer you created.

Result
The Now Assist Case in form portal is now configured and available for use.

Using Now Assist in portal case form

Skills performance dashboard

The skills performance dashboard helps you monitor how Now Assist for CSM skills are being used across CSM records and interactions. Use this dashboard to identify high-performing skills, track adoption trends, and spot skills that need attention.

Verify that:

- You have the required admin role.
- Now Assist for CSM skills are active in your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Analytics data collection is enabled.
- You have at least one Now Assist for CSM product configured.

View the Skills Performance dashboard

1. Navigate to **Now Assist Admin** > **Analytics** > **Skills Performance**.
2. Use the filters to refine your view:
   - **Date**: Select the time period to analyze
   - **Products**: Filter by specific Now Assist products
   - **Skills**: Choose individual skills or view all skills

   Your filter selections apply to all visualizations on the page.
3. Review the performance indicators to understand skill usage patterns.

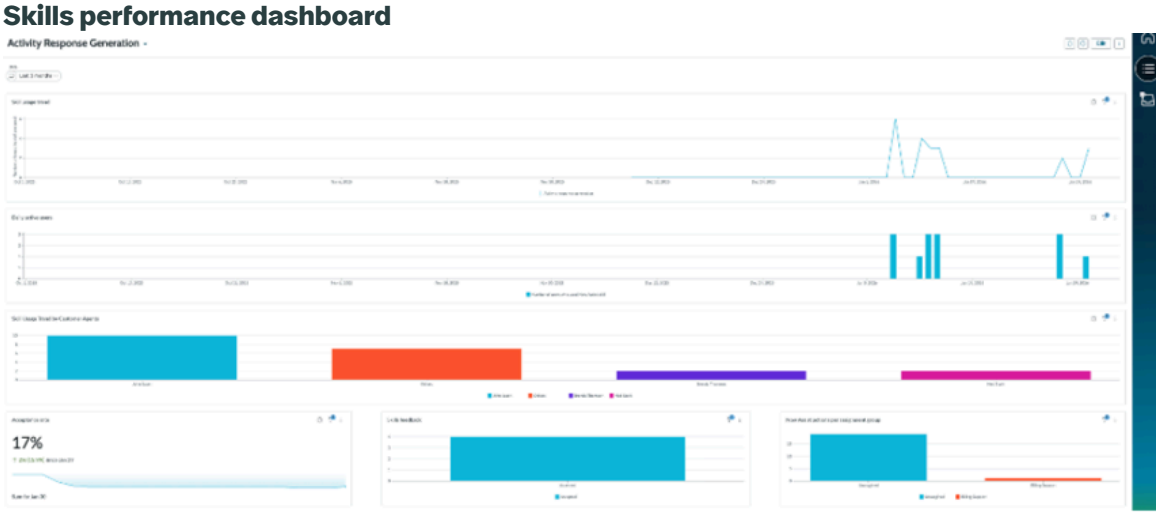
Usage metrics across the following Now Assist for CSM skills are:

- Email recommendations
- Chat recommendations
- Case summarization
- Chat summarization
- Sentiment Analysis case
- Activity response generation
- Sidebar summarization
- Resolution notes generation
- KB generation

Understand the performance indicators

The GenAI skills dashboards within Platform Analytics provide comprehensive metrics for tracking skill usage across CSM record and interaction pages. The dashboards include several default widgets that deliver insight into skill performance and user adoption. The **Skills Performance** dashboard provides the following key visualizations:

Skills performance dashboard



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Default widgets:

- **Skills usage trend**- Displays how frequently each skill is selected, triggered, and successfully executed over time, enabling you to monitor skill engagement over time.
- **Daily active users**- Shows the number of unique users activating GenAI skills each day, helping you measure adoption rates.
- **Acceptance rate**- Tracks the percentage of GenAI-generated content that users accept and apply compared to manually created content, providing a clear measure of content quality and user trust.
- **Skills feedback**- Captures end-user feedback through thumbs up and thumbs down responses on generated outputs.

Custom widgets:

- **Skill usage trend by customer agents**- A customizable widget that highlights which customer agents are using GenAI skills most frequently, helping you identify usage patterns at the individual agents level.
- **Now Assist actions per assignment group**- A customizable widget that highlights which assignment groups are using GenAI skills most frequently, helping you identify usage patterns at an assignment group level.

Note:

- Sentiment analysis on case, KB Generation skills do not have all 6 widgets.
- Sentiment analysis doesn't have Daily active users, Skill Usage Trend by Customer Agents, Now Assist actions per assignment group.
- KB generation doesn't have Acceptance rate and Skills feedback.

View detailed skill information

To drill into specific skill performance:

1. On the **Skills Performance** dashboard, select **View skill details**.
2. Choose the skill that you want to analyze.
3. Review the detailed usage and performance metrics for that skill.

Now Assist Analytics dashboard indicator details

AI Workflow pattern in Customer Service Management

In-product AI workflow patterns shows agentic workflow status, presence indicators, and AI-generated insights directly on Customer Service Management (CSM) record and interaction pages.

The AI workflow feature is built directly into Customer Service Management (CSM). This feature is available on Core UI and Configurable Workspace of the case records. You can view AI activity, respond to workflow prompts, and track progress — all from the case record page. AI indicators, workflow presence, and a dedicated AI Workflow tab are available on case records and interaction pages in the contextual side panel. The feature also introduces a **Triage Cases** button that initiates agentic workflows directly from the case form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

AI Workflow integration

AI workflow supports human-initiated and autonomous agent-initiated workflows. When triggered, the system displays a presence indicator showing that Now Assist is actively analyzing the record. The AI Workflow tab gives you a unified view of a workflow's status, findings, required inputs, and history, making it easy to work with AI-generated insights and automation. When a workflow needs input from the user, an alert appears with a **Review** button. Selecting this button takes you directly to the **AI Workflow** tab, opens the **Interactive View**, and automatically focuses on the specific plan that requires your input.

AI Workflow UI Components

The following table describes the key user interface components that support in-product AI workflow patterns.

UI component	Description
Triage Cases button	Trigger agentic workflows directly from case records using the Triage Cases button, eliminating the need to navigate to Now Assist panel. When you select the Triage Cases button on a case record, the system automatically initiates an agentic workflow for the case and email interaction record. You can monitor workflow progress by accessing the **AI Workflow** tab, where the same workflow appears with complete visibility. From this tab, you can drill into the workflow details to review individual steps or provide any required input to advance the workflow.
AI presence indicator	View the visual indicator showing that Now Assist is actively running an agentic workflow on the current record. Selecting the indicator displays AI activity status and shows up when **Triage Cases** button is selected.
AI Workflow tab	A dedicated tab that displays in#progress, completed, input#required, ready for review, failed, and cancelled workflows. You can view workflow details, AI#generated findings, and workflow history.
Workflow detail experience	Provides a step#by#step view of workflow execution. You can see each step in the workflow as it happens. You can check the workflow's status at any time. You can easily tell when the system needs information from you. You can also read the main findings and insights the AI has prepared. When you're ready, you can choose to continue to the next step, skip extra details, or let the workflow finish on its own. For example, if a workflow requires input like "Do you want deeper insights?", responding with No moves the workflow directly to complete state.
AI record indicators	Alerts and system#generated indicators showing AI#assisted record creation, findings, and transparency details directly on the case record.
Input request panel	Displays workflow #requested inputs such as text, Boolean, single#select, multi#select, or drop down values that enable you to influence workflow progression.
Workflow history	Shows completed actions, AI findings, supervision information, and any user responses supplied during workflow execution.

Feature behavior

The AI workflow tab provides a single view of all AI workflows related to a record. It shows workflow status, step-by-step details, and any required inputs, which you can enter directly in the tab. Workflows can also be canceled when needed.

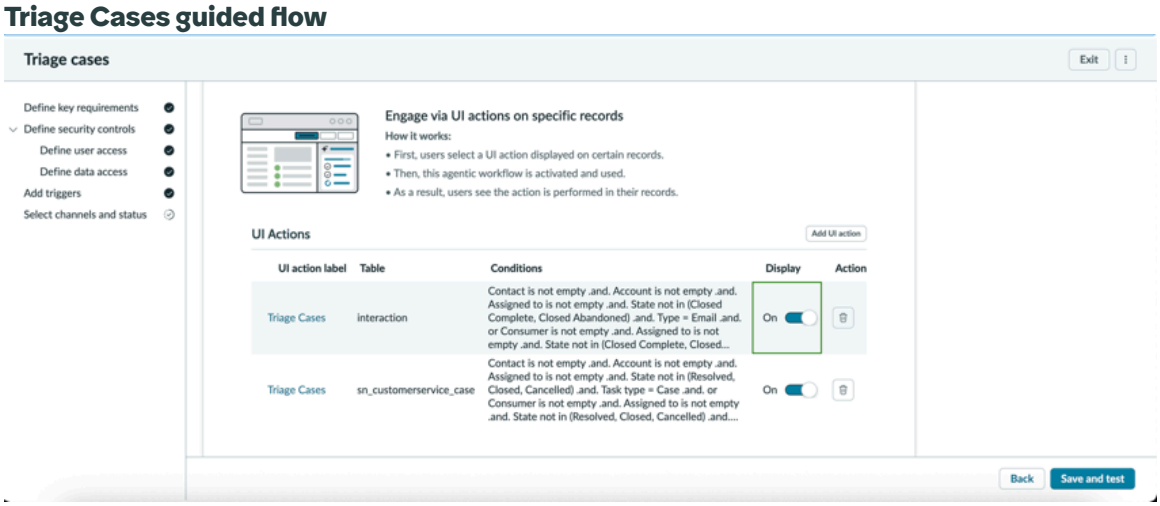
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

By default, this feature is turned off in the base system. To enable it, admin must set the system property com.glide.agentic_processes_view.enabled. Once the system property is enabled by an admin, the **Triage Cases** button (UI Action) and the **AI Workflow** tab is set to visible. If you prefer to hide this option, you can disable it in AI Agent Studio. To disable the **Triage Cases** button:

1. Open AI Agent Studio.
2. Select the **Triage Cases** agentic workflow.
3. Navigate to **Select Channel and Status**.
4. Scroll down to the **UI Actions** section.
5. Toggle the **Display** option to turn the button on or off.

This allows admin to control whether the **Triage Cases** button appears in the agent interface. All workflows must be initiated by a human agent.

Note:
The sn_now_canvas_ai.interactive_view_user role must be manually added to the sn_esm_agent role to enable agents to view the **AI Workflows** tab in the side panel.



The **AI Workflow** tab is visible on following pages in CSM Configurable Workspace:

- CSM default record page
- CSM frontline case page
- CSM interaction record page
- Email interaction record page
- Voice interaction record page
- Centered chat record page

The **AI Workflow** tab is visible on following pages in Core UI:

- Case view
- Email interaction view

Note:
The in-product trigger **Triage Cases** button is only enabled for case records and email type interactions.

© 2026 ServiceNow, Inc. All rights reserved.

Configure AI Search to use with the Troubleshooting steps identification AI agent

Configure AI Search with the Troubleshooting steps identification AI agent to fetch the relevant cases and knowledge articles that could help solve your issue.

Before you begin
Role required: admin

About this task
This AI agent relies on AI Search for fetching the relevant cases and knowledge articles that could help solve your issue. For more information on configuring AI Search, see Using AI Search with CSM Configurable Workspace and Semantic index configuration for indexed sources.

Procedure

1. Navigate to **All** > **AI Search** > **Indexed Sources** > **[CSM AIS] Case**.
2. In the Semantic Index Configuration related list, select **Body**.
3. Select **Active**.
4. Select **Save**.

Configure the Troubleshooting steps identification AI agent to use the Search retrieval tool

Configure the Troubleshooting steps identification AI agent to use the Search retrieval tool to fetch relevant cases and knowledge articles, including their attachments, to help solve your issue.

Before you begin
Role required: admin

About this task
The Search retrieval tool is configured to use the [CSM AIS] Configurable Workspace Search Config AI search profile. By default, this profile is linked to the Case and Knowledge search sources, which are defined in the [CSM AIS] Case and Knowledge Table indexed sources. For more information, see Indexed sources in AI Search.

Procedure

1. Navigate to **All** > **AI Search** > **Indexed Sources** > **New**.
2. On the form, fill in the **Name**, **Source**, and **Retention Policy** fields and select **Submit**.
   For a description of the field values, see Indexed Source form.
3. In the Semantic Index Configuration related list, select **New** and fill in the details as needed.
   For a description of the field values, see Semantic Index Configuration form.
4. In the Semantic Index Fields related list, select **New** and add the fields of the table that you want included in your search.
   For a description of the field values, see Semantic Index Field form.
5. Navigate to **All** > **AI Search Sources** > **New**.
6. On the form, fill in the **Name**, **Indexed Source**, and **Conditions** fields.
   For a description of the field values, see Search Source form.
7. Navigate to **All** > **AI Search** > **Search Profile** > **[CSM AIS] Configurable Workspace Search Config**.
8. In the Search Sources related list, select **Link Existing** and then link the previously created search source.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Activate the [CSM AIS] Configurable Workspace Search Config AI search profile by selecting **Publish**.
10. Navigate to **All** > **AI Agent Studio** > **Overview** > **Explore All**.
11. On the **AI agents** tab, navigate to **Troubleshooting steps identification AI agent** > **Add tools and information** > **Search retrievals** and select **Get Similar cases and Relevant knowledge articles**.
12. In the Edit search retrieval window, add the previously created indexed source into **Search sources** and then specify what to search for in the **Fields returned** and **Semantic index fields**. For a description of the field values, see Add a search retrieval to an AI agent.
13. Select **Save**.

Result
The Troubleshooting steps identification AI agent can now use the Search retrieval tool to fetch the relevant information from additional sources.

Using Now Assist for Customer Service Management (CSM)

If you have an agent role, you can summarize the customer chat conversations, summarize the case details, and generate the case resolution notes with the Now Assist for Customer Service Management (CSM) application.

Skills reuse

By default, all skills exist in the global domain. When you use Now Assist in a domain-separated environment, users are only able to access data within their domain. For example, if a user uses the summarization skill, Now Assist only uses material that exists within the user's domain when generating that summary. Additionally, there is no co-mingling of data for domain-separated instances when using generative AI skills. The data resides only on the instance, and the shared services used for generative AI do not persist any requests (prompts) and responses. For more information, see Domain separation in the Now Assist Admin console. (Note that global domain is not the same as global scope. For more information, see Exploring Next Experience pickers.)

Summarize your chat conversations to understand the chat context quicker:

- Summarize the chat between the Virtual Agent and the customer when the chat is handed off to a live agent.
- Summarize the chat between a live agent and a customer when a chat is handed off to another live agent or when an agent wraps up the conversation and ends the interaction.
- Summarize the chat at any point during the conversation using the `/summarize` quick action.

Summarize the case details to understand the case context quicker. These summaries are useful for long-running or complex cases that include multiple conversations between agents and customers.

Generate the case resolution notes to wrap up cases faster. When you're ready to propose a solution to a customer, this feature can generate resolution notes and add them to the Case form. The resolution notes also provide the context about the case resolution to other agents who might encounter similar issues.

Summarize a chat conversation by using Now Assist for Customer Service Management (CSM)

Generate a summary of the Virtual Agent chat history and the chat conversation between a live agent and a customer by using the chat summarization skill in the Now Assist for Customer Service Management (CSM) application.

Summarize a chat with Now Assist for Customer Service Management (CSM)

Before you begin

Role required: sn_customerservice_agent, sn_customerservice.consumer_agent

About this task

The chat summarization skill enables you to do the following actions:

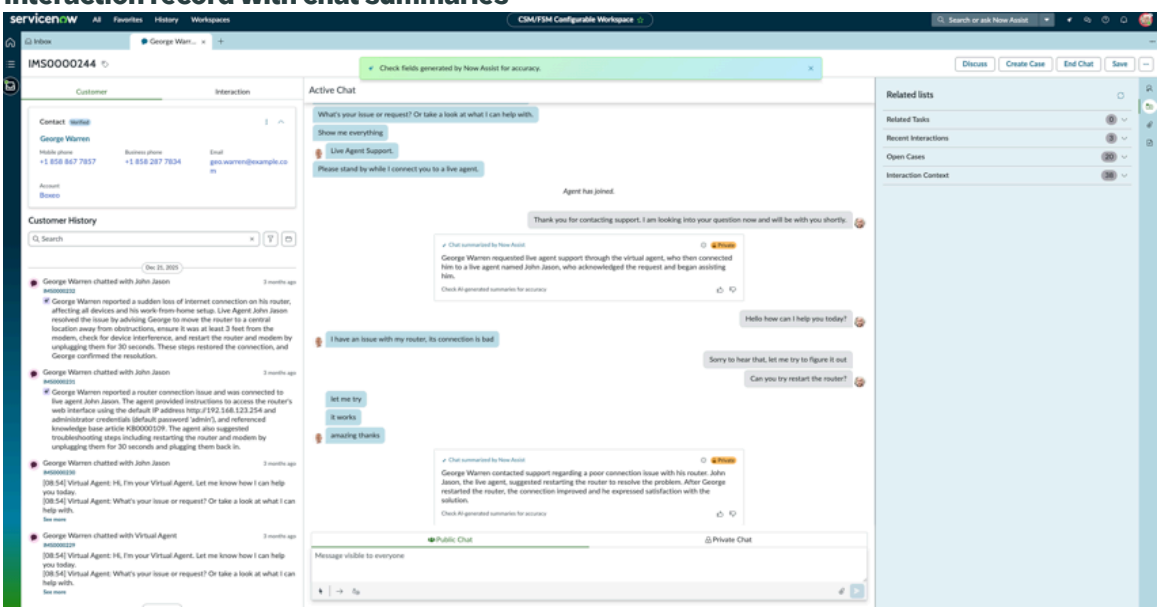
- Summarize the Virtual Agent chat history and provide a summary of the actions taken by the customer before the customer engages with a live agent.
- Summarize the live agent and customer chat history, including the actions taken by the customer before the live agent hands off the call to another live agent and the customer engages with the new agent.
- Summarize the chat at any point during the conversation using the `/summarize` quick action.
- Summarize the chat between a live agent and a customer when a chat is handed off to another live agent or when an agent wraps up the conversation and ends the interaction.

Note:
You can also generate a chat summary on demand from the Now Assist panel.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. In CSM Configurable Workspace, open a chat from your inbox.
   The chat summarization skill creates an inline summary in the Active Chat window. This summary includes the customer's issue and the actions that the customer has taken before the customer engaged with a live agent. The summary appears in the Active Chat window and is identified by the Now Assist icon ( ) and the **AI chat summary** label.

Interaction record with chat summaries



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. **Optional:** Provide feedback for the chat summary by selecting the helpful icon ( ) or not helpful icon ( ) on the summary card.
   This feedback improves the generative AI model and can help to improve the future versions of this skill. The system gathers the feedback on each generated summary and stores it in the generative AI logs (sys_generative_ai_log_list.do).
4. Chat with the customer to get any additional details about their question or issue.
   For example, if the customer is having an issue with the hardware, you may need the hardware model number and serial number.
5. In the Active Chat window, use the `/summarize` quick action to summarize the chat during the conversation with the customer.
   The chat summarization skill creates an additional inline summary in the Active Chat window. This quick action is helpful if you want to summarize long or detailed customer conversations.
6. **Optional:** If Live Agent to Live Agent handoff is enabled, transfer a chat to another agent after accepting an incoming chat with the following steps:

   a. Select the Transfer to Agent icon to transfer the interaction to another agent.

   b. Select the name of another live agent.

   c. The second live agent selects **Accept** to join the chat.
   Another summary of the chat is created when the conversation moves from one live agent to another live agent.

7. End the chat conversation by selecting **End Chat**.
   The chat summarization skill updates the **Short description** and **Chat Summary** fields on the interaction record when you end the chat.

   Note:
   If a chat summary isn't available for the interaction, the **Chat Summary** field doesn't appear on the interaction record.

8. Review the text in the **Short description** and **Chat Summary** fields and make any necessary corrections.
   Because the information in these fields is automatically generated, it's a good idea to review the text and make sure it's accurate.
9. Select **Save**.

What to do next

If necessary, you can create a case from an interaction record. The system uses the information from the **Short description** and **Chat Summary** fields on the interaction record to populate the **Short description** and **Description** fields on the case record.

The system displays the Now Assist icon ( ) next to these fields and removes the icon if the agent makes changes to the fields and saves the record.

Summarize a Sidebar discussion by using Now Assist for Customer Service Management (CSM)

Generate a summary of the Sidebar discussions between agents, requesters, and subject matter experts by using the chat summarization skill in the Now Assist for Customer Service Management (CSM) application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_customerservice_agent, sn_customerservice.consumer_agent

About this task
You can do these actions by using Sidebar discussion summarization:

- Summarize the Sidebar discussion at any point during the discussion using the `/Summarize` quick action.
- Share the Sidebar discussion to the work notes.
- Provide feedback for the summary.

Note:
The Sidebar discussion summarization skill is on the chat skill card in the Customer group.

Procedure
1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace** and open a customer service case that supports Sidebar discussion and summarization.
2. Choose an existing discussion, or start a new discussion.

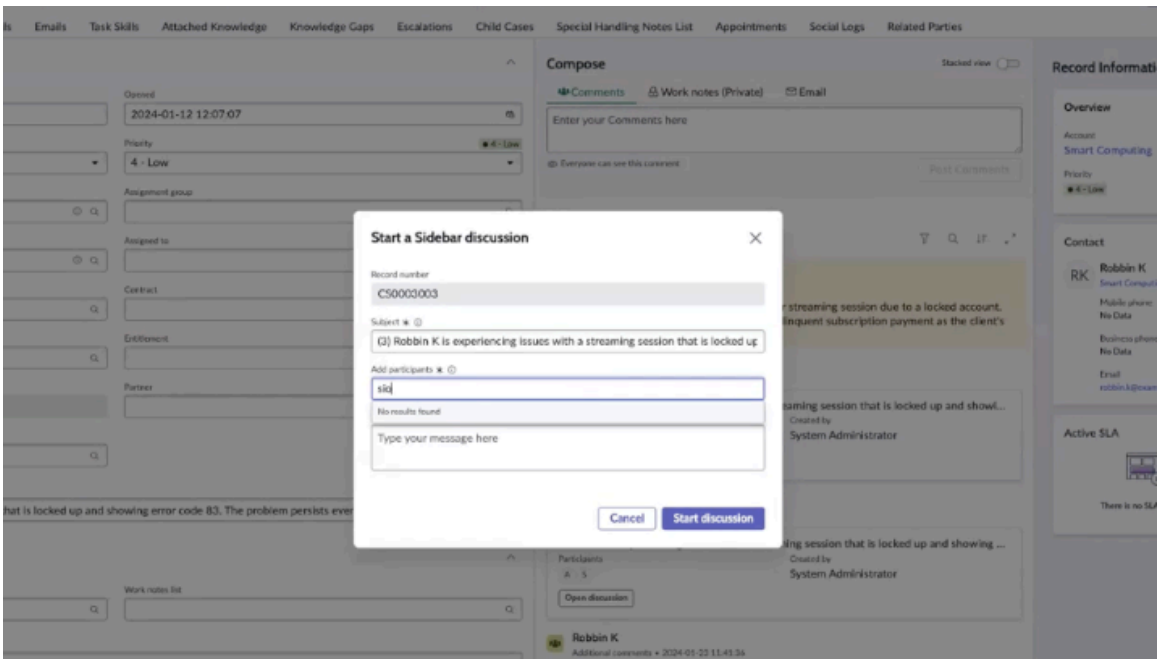
   Start a new discussion by doing these actions:

   a. Select **Discuss**.

   b. In the Start a Sidebar discussion modal, add participants.

   c. Select **Start Discussion**.

Sidebar discussion modal



3. Generate a summary of the Sidebar discussion during the conversation either by using the Summarize quick action (enter `/Summarize` in the Active sidebar discussion window), or by selecting the quick action icon .
4. After summarizing the Sidebar discussion, you can add it to the case work notes, and provide feedback about it.

Generate a chat reply recommendation by using Now Assist for Customer Service Management (CSM)

Generate a reply based on the context of the chat conversation using Now Assist icon. Chat reply recommendations can help provide agents with quick replies to common questions.

See the video to understand how generative AI provides agents with suggested, personalized responses during live chat interactions.

https://player.vimeo.com/video/1160327487?h=a0b394525a&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin

Role required: admin

About this task

You can do these actions by using the Now Assist icon:

- Generate a recommended reply that is based on the context of the conversation.
- Refine the recommendation by elaborating or shortening the response.

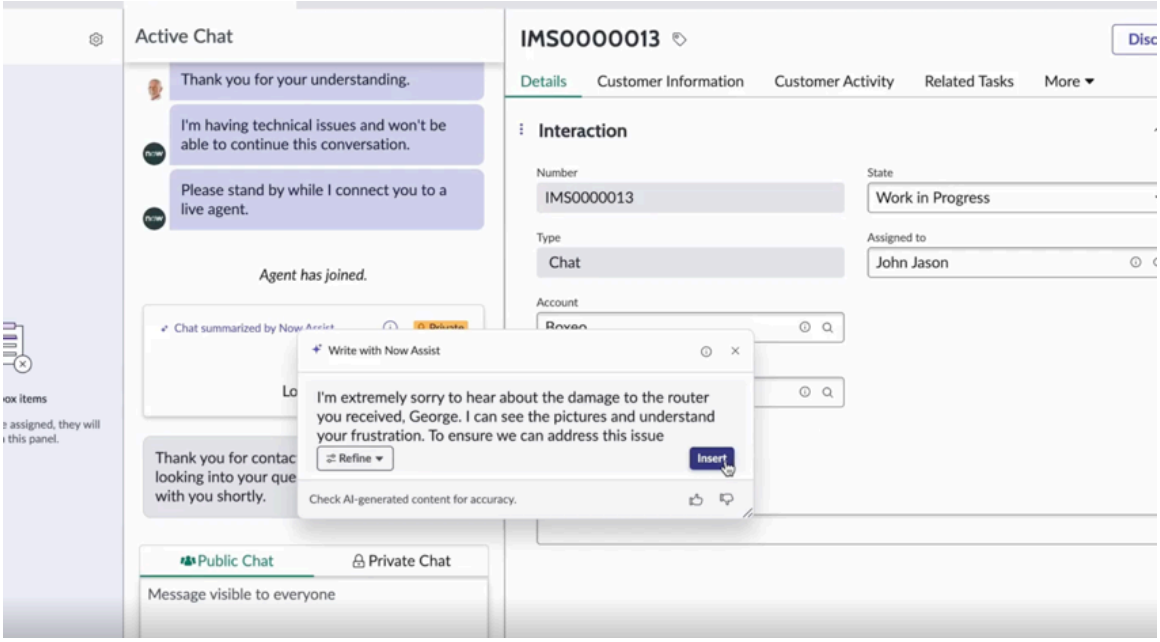
Note:
The Chat reply recommendation skill is on the Chat skill card in the Customer group.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. Open the inbox and accept the chat interaction.
   In the Active Chat section of the interaction, a summary of the Virtual Agent conversation is generated. The summary includes the actions that were taken before the requester engaged with the live agent. With this information, you can get an overview of what the requester has already mentioned in the Virtual Agent conversation and troubleshoot the issue.
3. Chat with the requester to get any additional details about their question or issue, if needed. For example, if the requester is having an issue with hardware, you may need the hardware model number and serial number.
4. In the chat message window, either type a response, or leave blank, and then select the Now Assist icon ✦

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist icon Modal



The reply response appears in the Now Assist icon modal.

5. Review the generated reply and select **Refine** to modify the response, or select **Insert** to paste the response into the chat message window.
   If the reply response was refined, you can toggle between versions.
6. In the chat message window, select **Send**.
7. End the chat by selecting **End Chat**.

Summarize a case by using Now Assist for Customer Service Management (CSM)

Generate a summary from the fields that you selected on the case record and quickly understand the case context by using the case summarization skill in the Now Assist for Customer Service Management (CSM) application.

Before you begin

Role required: sn_customerservice_agent, sn_customerservice.consumer_agent

About this task

The case summarization skill provides you with a concise summary of a customer service case, including the issue, actions taken, and resolution details. With this skill, you can do the following tasks:

- Generate an initial summary of a case so that you can understand the case context.
- Summarize all the work that has been done on a case.

The case summarization skill is available in CSM Configurable Workspace and in Core UI.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In CSM Configurable Workspace, you use the Case summary by Now Assist component to generate a summary. This component appears above the activity stream.

  Note:
  You can also generate a case summary on demand from the Now Assist panel.

- In Core UI, you select the **Summarize** button on the case record to generate a summary.

The case summarization skill checks the case record to determine if there's enough information available to create a summary:

- When an agent opens the case record
- When an agent refreshes the case record page

If there's enough data the Case summary component displays the **Summarize** button. If there isn't enough data, the component displays a message in place of the button.

Procedure

1. Navigate to **Workspaces** > *`CSM Configurable Workspace`* and open a customer service case.
2. In the Case summary by Now Assist component, select **Summarize**.
   The Case summary by Now Assist component appears above the activity stream. When automatic triggering is enabled for case summarization, the system proactively generates a summary when a case is opened. When automatic triggering is turned off, **Summarize** button is displayed, enabling agents to generate the summary on demand. The component is collapsed by default and expands to display the summary. For longer summaries that don't fit in the window, select **View more** and use the scroll bar to view the rest of the content.

   Note:

   - The case summary card is available in CSM Configurable Workspace version 26.1.0 and earlier.
   - Generating and displaying the summary may take several seconds.

Case record with case summary

Generate an email response by using Now Assist for Customer Service Management (CSM)

Generate an email response that is based on the case and email context by using the Now Assist icon. With email response, agents can create quick emails or responses, helping minimize errors and ramp up productivity.

https://player.vimeo.com/video/1129307545?h=ee0d47dd56&badge=0&autopause=0&player_id=0&app_id=58479%2Fembed

Before you begin

Role required: admin

About this task

An agent can do these actions by using the Now Assist icon:

- Generate a recommended email response that is based on the case and email context.
- Generate recommended email for new, forwarded, and finishing draft emails.
- Refine the recommendation by elaborating or shortening the response.
- Availability of email template recommendations while composing an email.

Note:
The email response skill is on the Case skill card in the Customer group.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace** and open a customer service case that supports the email response.
2. Choose how to compose an email.
3. In the email message window, either type a response, or leave blank, and then select the Now Assist ✦.

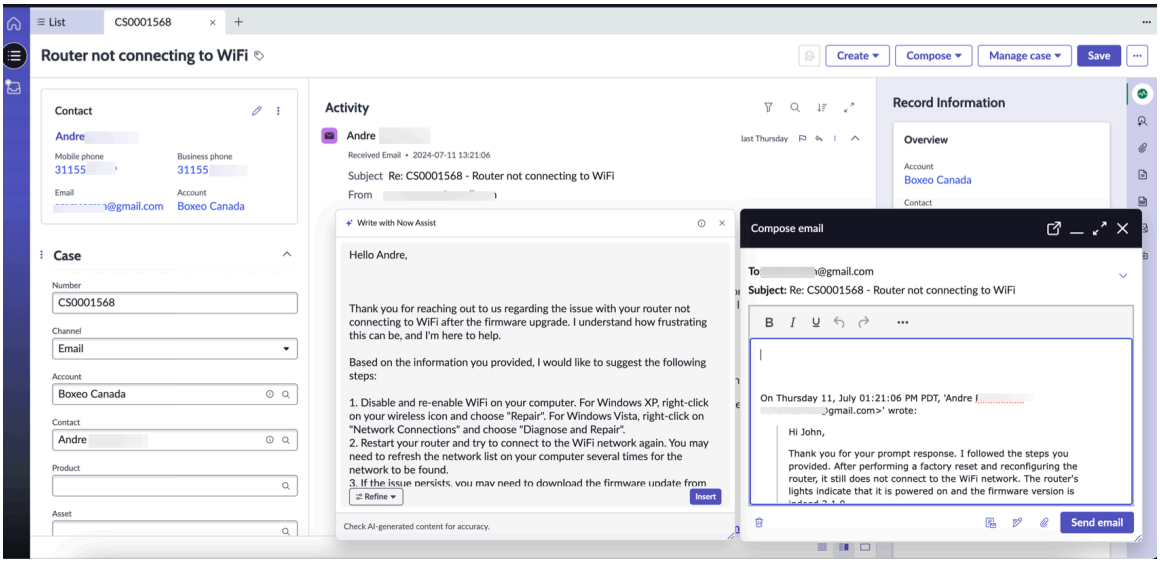
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist icon modal



4. Update the selected text with refined text by selecting **Replace**.
5. Review the generated email response and select **Refine** to modify the response, or select **Insert** to paste the response into the chat message window.
6. Select **Send Email** or discard the draft if you don't like the recommendation.

Generate the resolution notes for a case by using Now Assist for Customer Service Management (CSM)

Generate the resolution notes for a case, propose the resolution to the customer, and add the resolution information to the case record by using the resolution notes generation skill in the Now Assist for Customer Service Management (CSM) application. By generating the resolution notes, you can wrap up cases faster and provide information about the case resolution to other agents who might encounter similar issues.

About this task

Watch this video to learn how to generate the resolution notes for a case.

https://player.vimeo.com/video/1167573799?h=b969dfc427&badge=0&autopause=0&player_id=0&app_id=58479

Before you begin

Role required: sn_customerservice_agent, sn_customerservice.consumer_agent

About this task

In CSM Configurable Workspace and Core UI, you can generate the resolution information for a case by selecting **Propose Solution** on the case record. This UI Action displays the Propose Solution modal. Using this modal, you can select a resolution code, add information about the cause of the issue, and review and edit the resolution notes text.

Note:
The Propose Solution UI action is available to the customer service agents who have assigned cases in the Open state.

You can also generate resolution information on demand from the Now Assist panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The resolution notes generation skill requires a minimum of 50 words in the case record to generate the resolution notes. If the resolution notes cannot be generated, the system displays a message below the **Resolution notes** field.

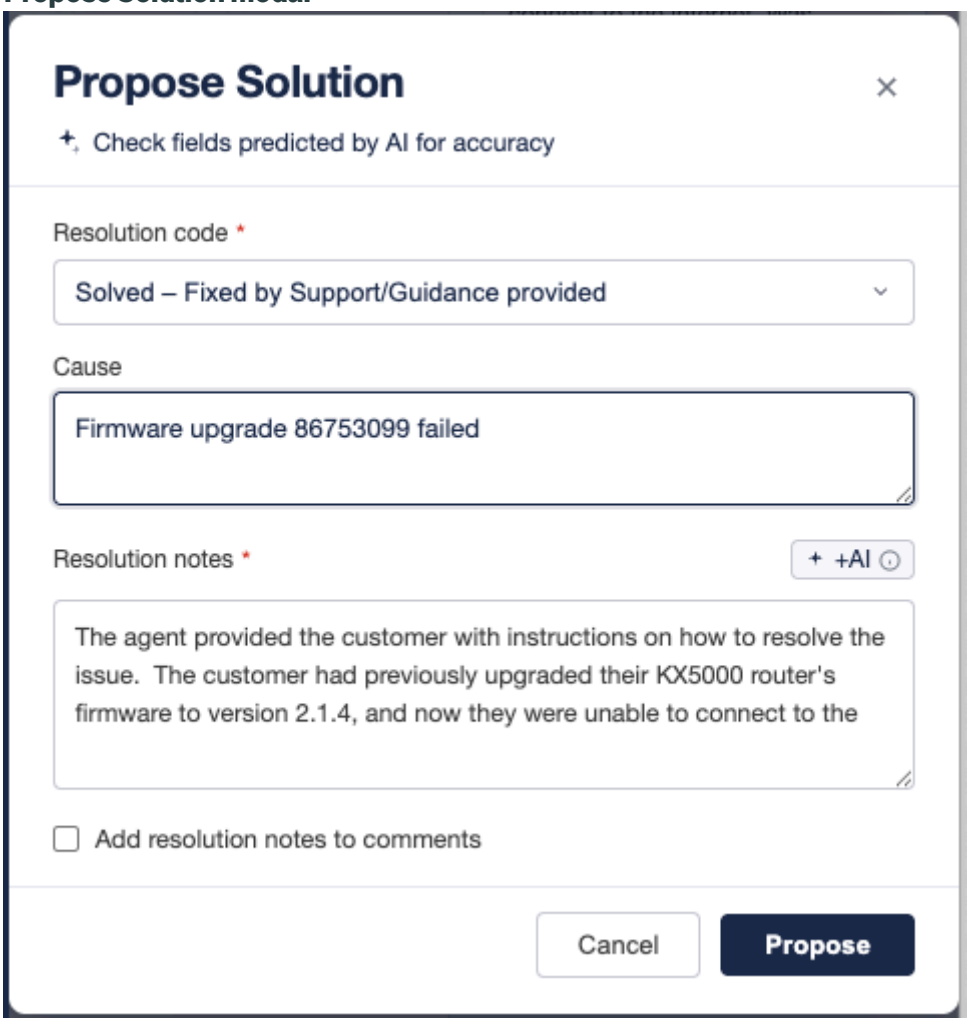
Note:
You can skip this if you're using the Now Assist Content menu experience for Resolution Notes Generation skill.

Procedure

1. In CSM Configurable Workspace, open a customer service case.
2. Select **Propose Solution**.
   The system generates a resolution summary and displays the information in the Propose Solution modal, which includes the following fields:
   - **Resolution code**
   - **Cause**
   - **Resolution notes**

   If the **Resolution notes** field on the case record is empty, the resolution notes generation skill adds the information to this field in the modal.

Propose Solution modal



3. Select a **Resolution code** for the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A resolution code describes how the case was resolved. For example, common resolution codes include:

- Solved: Fixed by Support/Guidance provided
- Solved: Fixed by closing related PRB
- Solved by customer

4. **Optional:** If you know the cause of the customer's issue, add it to the **Cause** field.
   For example, a customer's issue may be the result of a software upgrade.
5. In the **Resolution notes** field, review the resolution summary and make any necessary corrections.
   Because the information in this field is automatically generated, it's a good idea to review the text and make sure it's accurate. Any changes that you make are saved when you save the case record.
6. **Optional:** If you want to add the resolution information to the case activity stream, select the **Add resolution notes to comments** check box.
   Selecting this check box makes the resolution notes available to anyone who can view the case activity stream.
7. Select **Propose**.
   - The system populates the fields in the Closure Information section of the case record with the information from the Propose Solution modal.
   - The case moves to the Resolved state.
   - The resolution is proposed to the customer.

Generate resolution notes in case form

Use the Now Assist context menu in the resolution notes field of the case form in both Core UI (UI16) and Workspace to create resolution note.

Before you begin
Role required: admin

About this task
In both the CSM Configurable Workspace and Core UI, you can generate resolution notes for a case by using the Now Assist context menu within the resolution notes field in the case form.

An agent can do these actions by using the Now Assist icon ✨:

- Generate resolution notes based on the case context.
- Refine the recommendation by elaborating or shortening the content.

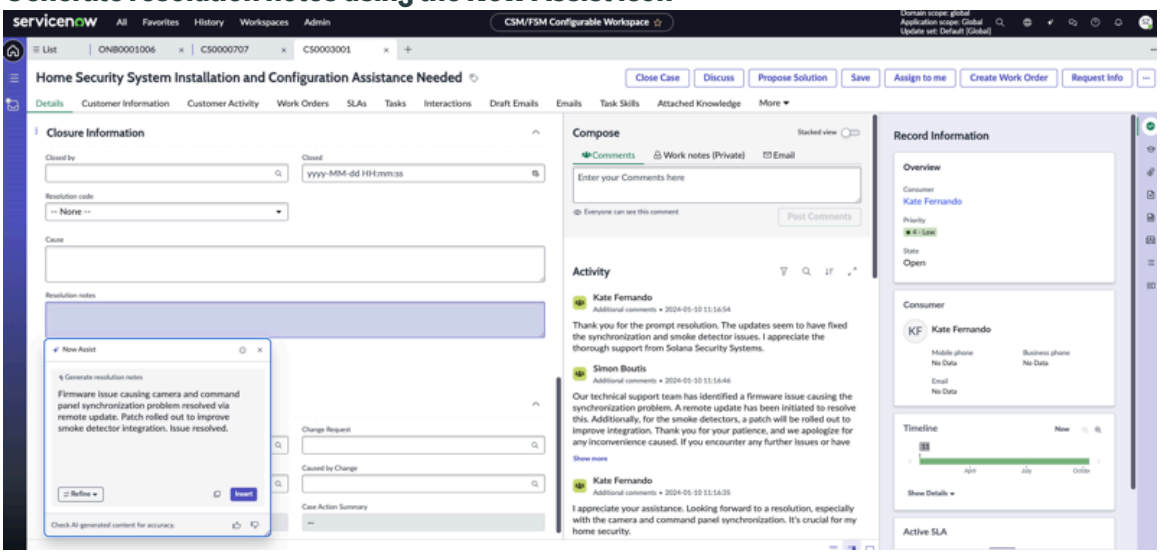
Note:
The case must be in the open state.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace** and open a customer service case that is in an open state.
2. Navigate to the Resolution notes field in the case form.
3. Select the Now Assist icon ✨.
   Now Assist icon ✨ generates a recommended text that is based on the context of the case.

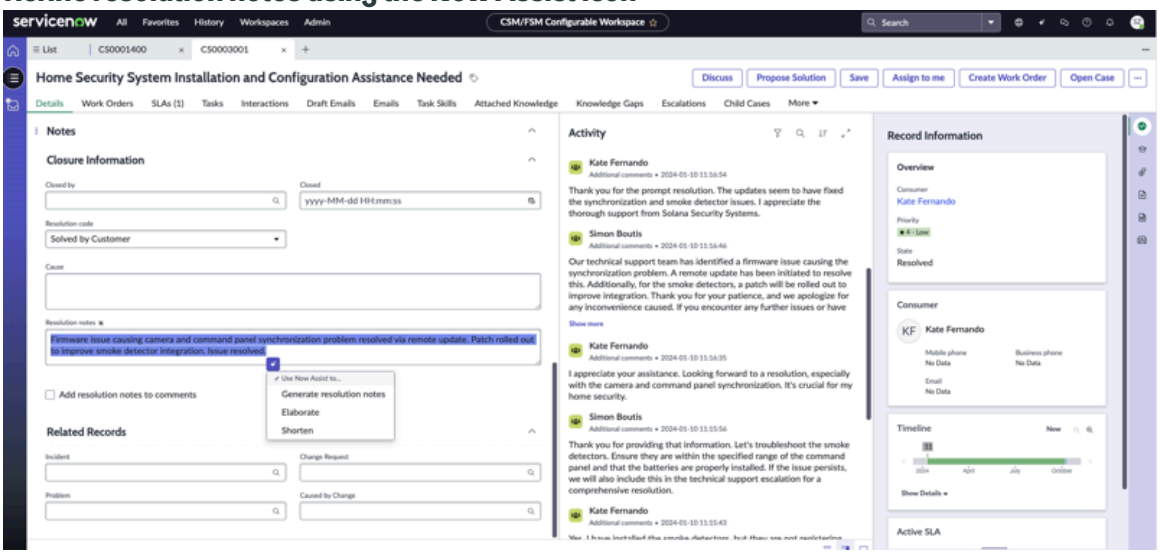
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Generate resolution notes using the Now Assist icon



4. Select **Insert** to add the generated content into the resolution notes field.
5. **Optional:** Review the generated content and select **Refine** to modify the content. You get the option to either elaborate or shorten the content as needed.

Refine resolution notes using the Now Assist icon



Generate a knowledge article from the CSM Configurable Workspace and classic environment with Now Assist

Generate the knowledge articles for resolved and closed cases within the CSM Configurable Workspace and classic environment with Now Assist.

Before you begin

To generate a knowledge article for a case, the case must be in the **Resolved** and **Closed** state, and must not already have a knowledge article linked to it. Although the **Create Knowledge** button appears in other states, it won't trigger the skill. In those cases, clicking the button just opens the KB article form for manual entry.

Verify that Configure knowledge generation is set up.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- For Now Assist panel, if property sn_customerservice.enable_knowledge_kcs and KCS Article Template is not enabled then it will create article using standard template for cases.
- For Core UI / Workspace, if sn_customerservice.enable_knowledge_kcs and KCS Article Template is not enabled then it will not show **Create Knowledge** button on case form.

Make sure that your administrator enables Now Assist experience on the Create Article page to confirm that the following knowledge base generation criteria is configured:

- The KB generation skill is activated.
- In the Now Assist Admin console, verify that the following criteria are in place:
  - Specify the table record and input fields.
  - Specify the conditions for the skill availability from the list of attributes.
  - Display the knowledge base generation feature In-product and specify the Now Assist panel.
- To manage who can access knowledge bases and knowledge articles, you can set permissions to define which users or user groups can read or contribute to the content. For more info, see Managing access to knowledge bases and knowledge articles

Role required: agent

About this task

In CSM Configurable Workspace and classic environment, you can generate the knowledge article information for a case by selecting **Create Knowledge** on the case record. This UI Action displays the Use AI to draft this article modal. By using this modal, you can choose to write the article yourself or draft an article with Now Assist and review and edit the knowledge article text.

Note:

The Create Knowledge UI action is available to the customer service agents who have assigned cases in the Resolve or Close state. You can also generate knowledge article information on demand from the Now Assist panel. For more information, see Knowledge article generation.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. Open a case that is assigned to you.
   The case record status should be either resolved or closed.
3. Create the article by selecting **Create Knowledge** from the UI actions for the case record.

   Note:

   The **Create Knowledge** UI Action is only visible when a case doesn't have an existing knowledge article that is associated with it.

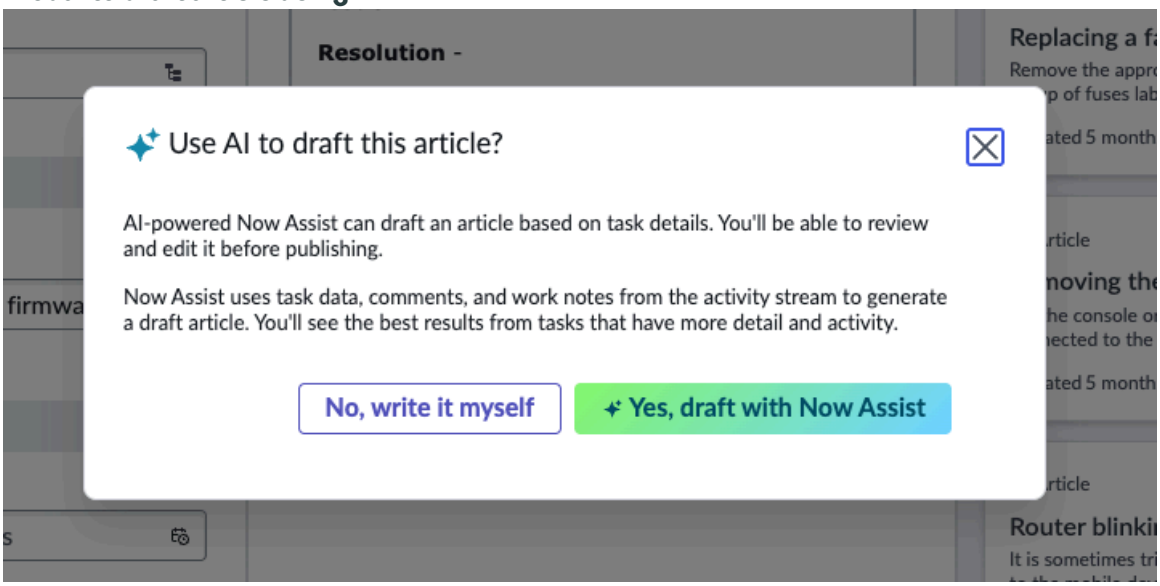
   Alternative way to trigger the skill Request the generative AI capabilities in Customer Service Management by using the Now Assist panel.
4. In the Create article modal, select a knowledge base and an Article template, if displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If no options are displayed, the default template selected by your administrator in the Now Assist Admin console is used.

5. Select **Create Article**.
6. In the Use AI to draft this article modal, select **Yes, draft with Now Assist**.

Modal to draft article using AI



7. **Optional:** In the new modal, search for similar cases that can be used to generate the article; otherwise, select **Cancel**.
The completed article is displayed in the chosen template with a success message "This article was drafted by Now Assist. Be sure to review it for accuracy before saving."

Note:

- If no similar cases exist, this modal doesn't appear, and the article is created. The generated article, based on the chosen relevant records, is linked to both the account case and all the relevant cases selected. Similar cases are populated by the AI Search profile titled [KM] Multi-task Article Generation.
- You can select up to five additional relevant cases in the new modal to generate the article.
- You can modify the draft before saving it. The article appears in a new tab with a unique ID number for the knowledge article and is attached to the parent record.
- If Now LLM Service fails to generate a result, an error message is displayed.
- When creating an article by using Now Assist, after the process is triggered, it can't be stopped. Now Assist continues to generate the article even if you close the modal.

8. Select the **Knowledge Base** and the **Language** in the pop-up window **What language should *Now Assist* draft this article in**.
9. Select **Continue**.
The article is generated in the selected knowledge base and language, and the content is displayed in that same language.
10. Select some text in the KB article and then select the Now Assist icon ✨.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist icon generates a recommended text that is based on the context of the selected content in the article up to that point. You can refine your response by selecting to elaborate or shorten the selected text.

11. Select **Insert** to paste the generated response.
12. Review the Now Assist generated article and select **Save** or **Publish**.
    The Now Assist success message disappears which means that it's no longer a Now LLM Service generated article.

Note:

Now Assist icon is also available for the published KB articles.

Now Assist in Knowledge Management

Summarize a call by using Now Assist for Customer Service Management (CSM)

Generate a summary of the call conversation between a live agent and a customer by using the call summarization skill in the Now Assist for Customer Service Management (CSM) application.

Before you begin

To make the skill available in the Now Assist Admin console, install Install ServiceNow Voice applications.

Role required: sn_customerservice_agent, sn_customerservice.consumer_agent, sn_csm_agent

About this task

The call summarization skill enables you to do the following actions:

- Summarize the call between a live agent and a caller when either the caller or the agent wraps up the conversation and ends the interaction.
- Generate a call summary on demand from the Now Assist panel. For more information, see Request the generative AI capabilities in Customer Service Management by using the Now Assist panel.
- When real-time transcription is enabled, agents can see a transcript of the voice calls while interacting with the customers. With real-time transcription, an agent gets a better understanding of the customer issues, and a manager gains insights into the customer trends and agent training gaps.
- When real-time transcription is turned off, agents don't see the conversation panel. Once the transcripts are ready, agents can see a Now Assist banner showing field predictions being generated. Then, another banner shows up with the predicted fields.
- A call summary is available for both outbound and inbound calls. For more information, see Real time transcriptions for ServiceNow Voice for Customer Service Management.
- Dynamic translation is supported for call summarization.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. Set your status as Available in CSM Configurable Workspace so that you can receive a call request when a customer calls in and requests to speak to an agent.
   The call summarization skill creates an inline summary in the Active Chat window. This summary includes the transcript of the conversation between the agent and the customer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Chat with the customer to get any additional details about their question or issue.
   In the Active Chat window, a transcript of the call conversation with the customer is created. For example, if the customer is having an issue with the hardware, you may need the hardware model number and serial number.
4. **Optional:** If enabled, transfer a call to another agent after accepting an incoming call and do the following actions:
   You need to have Advanced Work Assignment set up for an agent-to-agent transfer. For more information, see advanced work assignment setup.

   a. From the keypad, select **Quick connects** while you're still connected to the customer.

   b. Select the name of another live agent.

   c. Select **Call**.

   - If the second agent selects **Join**, the second agent joins the conversation with both the first agent and the customer. The customer can have a conversation with both agents.
   - If the second agent selects **Swap**, the second agent joins the conversation while the first agent is put on hold. The customer is in a conversation with the second agent only.
   - The **Assigned to** field is updated with the new agent's name and a summary card of the call is created in the conversation thread when the call is transferred from one live agent to another.

5. End the conversation by selecting **End call**.
   The call summarization skill updates the **Short description** and **Chat Summary** fields on the interaction record when you end the call.

   Note:

   If a call summary isn't available for the interaction, the **Chat Summary** field doesn't appear on the interaction record.

6. Review the text in the **Short description** and **Chat Summary** fields and make any necessary corrections.
   Because the information in these fields is automatically generated, human review of the text is necessary to ensure its accuracy.

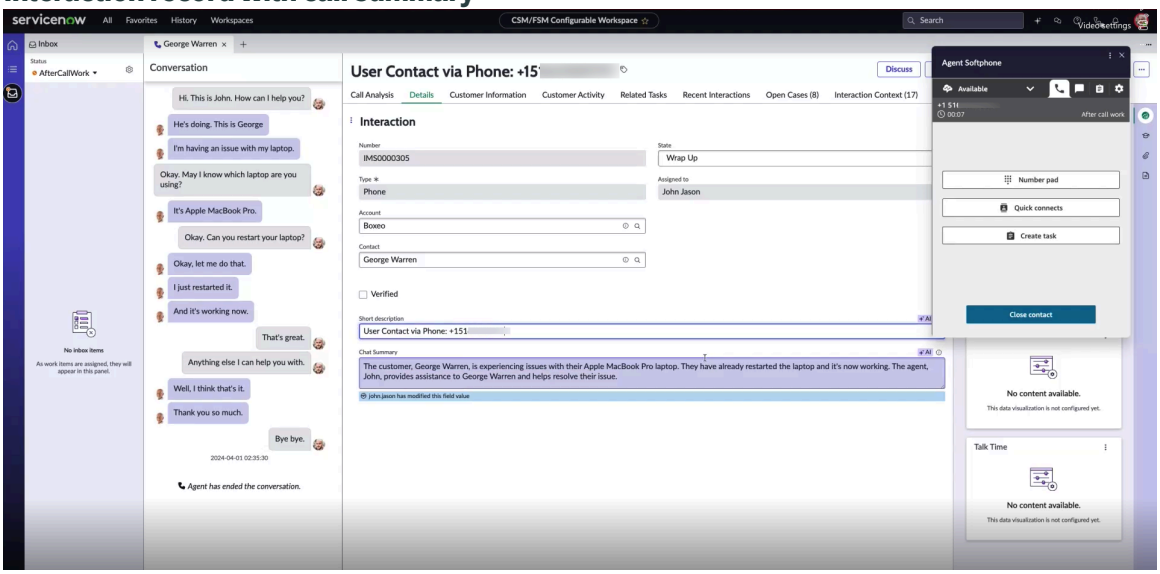
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select **Save**.

Interaction record with call summary



What to do next

If necessary, you can create a case from an interaction record. The system uses the information from the **Short description** and **Chat Summary** fields in the interaction record to populate the **Short description** and **Description** fields in the case record.

The system displays the Now Assist icon ( ) next to these fields and removes the icon if the agent changes the fields and saves the record.

Using conversational search in Now Assist panel

Get common case-related information from the KBs within the case record by asking questions in the Now Assist panel.

This video provides a walk through of how to get common case-related information from your Knowledge Bases directly within the case record by asking questions in the Now Assist panel.

https://player.vimeo.com/video/1167568967?h=baac74ca43&badge=0&autopause=0&player_id=0&app_id=58479

Agent Interaction with Now Assist panel and Knowledge Bases (KBs): As an agent, you should be able to ask questions within the Now Assist panel (NAP) to find any relevant information. If the answer to your question is available in the KBs, it is displayed within the Now Assist panel. Additionally, the sources from where the information is derived is also shown. If the answer is not available within the KB search, you are redirected to the global search experience.

Benefits

- Efficiency: Agents can quickly find answers without leaving the Now Assist panel.
- Transparency: Sources of information are clearly indicated, enhancing trust.
- Comprehensive Search: If the answer isn't found in the KBs, agents are redirected to a global search to ensure no information is missed.
- Customer Support: Agents can quickly resolve customer issues by accessing detailed and accurate information and enhancing the customer experience.

To use the feature, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. In Core UI or CSM Workspace, open a case that is assigned to you.
2. From the header menu, select the Now Assist icon to open the Now Assist panel.
3. In the Now Assist panel, type in a question related to a case.

To get started with configuring the Now Assist Q&A Skill, see the Configuring Now Assist Admin features instructions.

Using scheduling assistant via GenAI in Virtual Agent

Book, reschedule, and cancel appointments with Virtual Agent conversations using Now Assist. Set up a new appointment, modify an existing one, or cancel an appointment with a streamlined and user-friendly flow.

Virtual Agent conversations supported by Now Assist uses Large Language Model (LLM) to communicate with customers.

Booking Appointments

To book a new appointment:

1. Initiate the Conversation: The logged-in user contacts your business via your portal. User starts a chat with the Virtual Agent through the Now Assist panel. The user enters the appointment booking request into the chat, and the Virtual Agent uses Large Language Model (LLM)to understand the request.
2. Provide Details: The Virtual Agent asks the user to share the necessary details such as the date, time, location and purpose of the appointment. The user chooses the purpose, a location and a date and time slot for the appointment.

   Note:
   If the time provided by the user has a conflict with the location's calendar, the Virtual Assistant opens the calendar for the requester to choose a new time.

3. Confirm the Appointment: The Virtual Agent confirms the details and books the appointment in the user’s calendar.

Rescheduling Appointments

To reschedule an existing appointment:

1. Start the Chat: The logged-in user contacts your business via your portal. The user enters the appointment booking request into the chat, and the Virtual Agent uses Large Language Model (LLM)to understand the request.
2. Specify the Appointment: The user chooses an appointment to reschedule.
3. New Details: The Virtual Agent shares the new dates and times for the rescheduled appointment. User chooses a date and time for the rescheduled appointment.
4. Confirmation: The Virtual Agent updates the calendar and confirms the new appointment details.

Canceling Appointments

To cancel an appointment:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Begin the Conversation: The logged-in user contacts your business via your portal. The user enters the appointment booking request into the chat, and the Virtual Agent uses Large Language Model (LLM) to understand the request.
2. Identify the Appointment: User chooses the date and time of the appointment they wish to cancel.
3. Confirm Cancellation: The Virtual Agent removes the appointment from the user's calendar and confirm the cancellation.

Now LLM Service ensures that these interactions are smooth and efficient, allowing you to manage your schedule with ease.

Suggested steps generation in Now Assist for Customer Service Management (CSM)

Generate suggested steps automatically by analyzing clusters of closed cases with similar case resolution in the Now Assist for Customer Service Management (CSM) application.

Before you begin

Role required: sn_customerservice_agent and sn_customerservice.consumer_agent

About this task

The system uses data from the **Short description** field and the filter conditions set in the case input table to generate the suggested actions based on similar past resolved cases. These steps outline the next best actions that agents can take as part of resolving cases.

If suggested steps are available for a case, Now Assist for CSM generates and displays these steps in a card at the top of the Recommended Actions tab in the contextual side panel.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. Using the List icon , open a case that is not in **Closed** or **Complete** state.
3. Select the Recommendations icon in the contextual side panel to display the Recommended Actions tab.
   The system displays the **Suggested steps by** *Now Assist* card at the top of the tab.
4. In the **Suggested steps by** *Now Assist* card, select **Generate**.
   The steps to resolve the case appears in the **Recommendations** window in the case record. This action may take a few minutes.

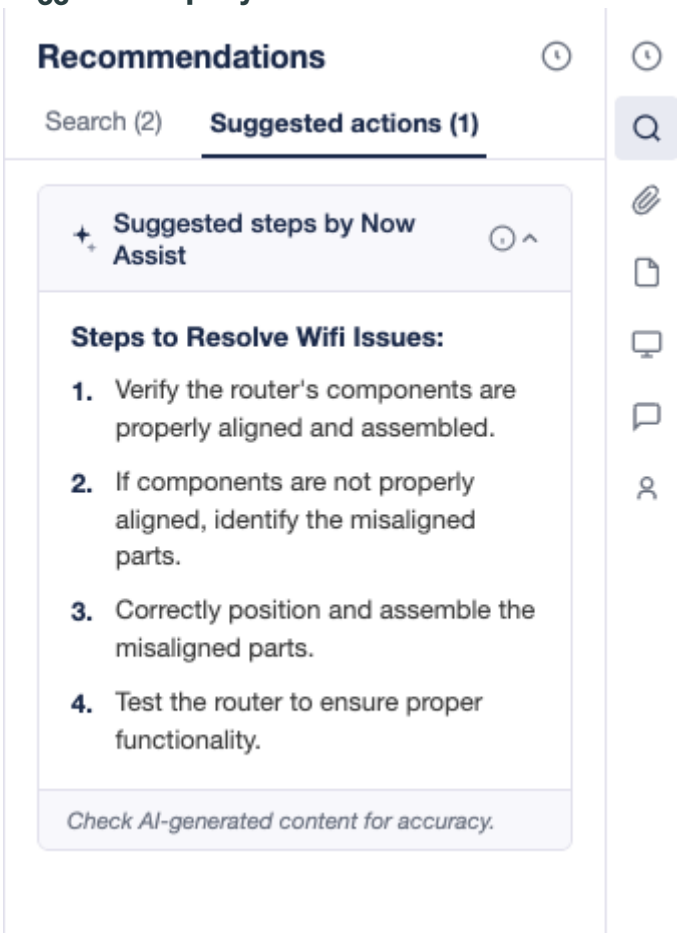
Suggested steps by Now Assist



Note:

Suggested Steps show an AI gradient styling across:

- The sidebar
- The Suggested Steps component
- The Sparkle icon
- The Generate button

These visual updates help users clearly identify AI-generated experiences, creating a more consistent and intuitive interface.

Analyze sentiments in Now Assist for Customer Service Management (CSM)

Make informed decisions on cases based on requester's sentiment and the reasoning behind it in the Now Assist for Customer Service Management (CSM) application.

Before you begin

Role required: sn_customerservice_agent and sn_customerservice.consumer_agent role

Procedure

1. Navigate to the case or case form in the Core UI or in CSM Configurable Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To	Do this
Navigate in Core UI	**a.** Go to **All** > **Cases** The case list view appears.  You can analyze the Sentiment and Sentiment trend for the case list. **b.** Select a case. The case form view appears.  **c.** In the Sentiment field, select the information icon ⓘ to see the reasons for the sentiment.
Navigate in CSM Configurable Workspace	**a.** Go to **Workspaces** > **CSM Configurable Workspace** **b.** Select the List icon ☰. **c.** Go to **Cases** > **Open** The CSM Configurable Workspace list view appears.  **d.** Select a case. The CSM Configurable Workspace form view appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To	Do this
	 **e.** Select the information icon ⓘ to see the reasons for the sentiment.

2. **Optional:** In Core UI or CSM Configurable Workspace list view, you can sort the cases and interactions based on the sentiment scale (Very Positive, Positive, Neutral, Negative, or Very Negative) and the sentiment trend.
3. **Optional:** Manually refresh a sentiment.
   a. In the Core UI or in CSM Configurable Workspace, enter a comment in the Additional Comments field.
   b. In the CSM Configurable Workspace interface, a red dot appears on the information icon ⓘ next to the sentiment.
   c. Select the information icon ⓘ and then select the refresh icon ↻ to see the updated sentiment scale (Very Positive, Positive, Neutral, Negative, or Very Negative)and sentiment trend.

Request the generative AI capabilities in Customer Service Management by using the Now Assist panel

Request the contextual generative AI capabilities, such as a chat summary, case summary, case resolution notes, call summary, or knowledge article generation in the CSMCustomer Service Management application by using the conversational interface in the Now Assist panel.

Before you begin

Make sure that Next Experience is enabled in the instance. For more information, see Next Experience UI.

Make sure that AI search and Now Assist in Virtual Agent are enabled in the instance for the conversational subflows and actions to work.

Role required: sn_customerservice_agent, sn_customerservice.consumer_agent

About this task

You can use the Now Assist panel in CSM Configurable Workspace to request a chat, call or case summary, generate case resolution notes and knowledge article, ask a question about a case, Use AI agents to complete cases and use conversational subflows and actions.

For more information about the Now Assist panel, see Now Assist panel. For information about activating the Now Assist panel, see Activate the Now Assist panel standard chat.

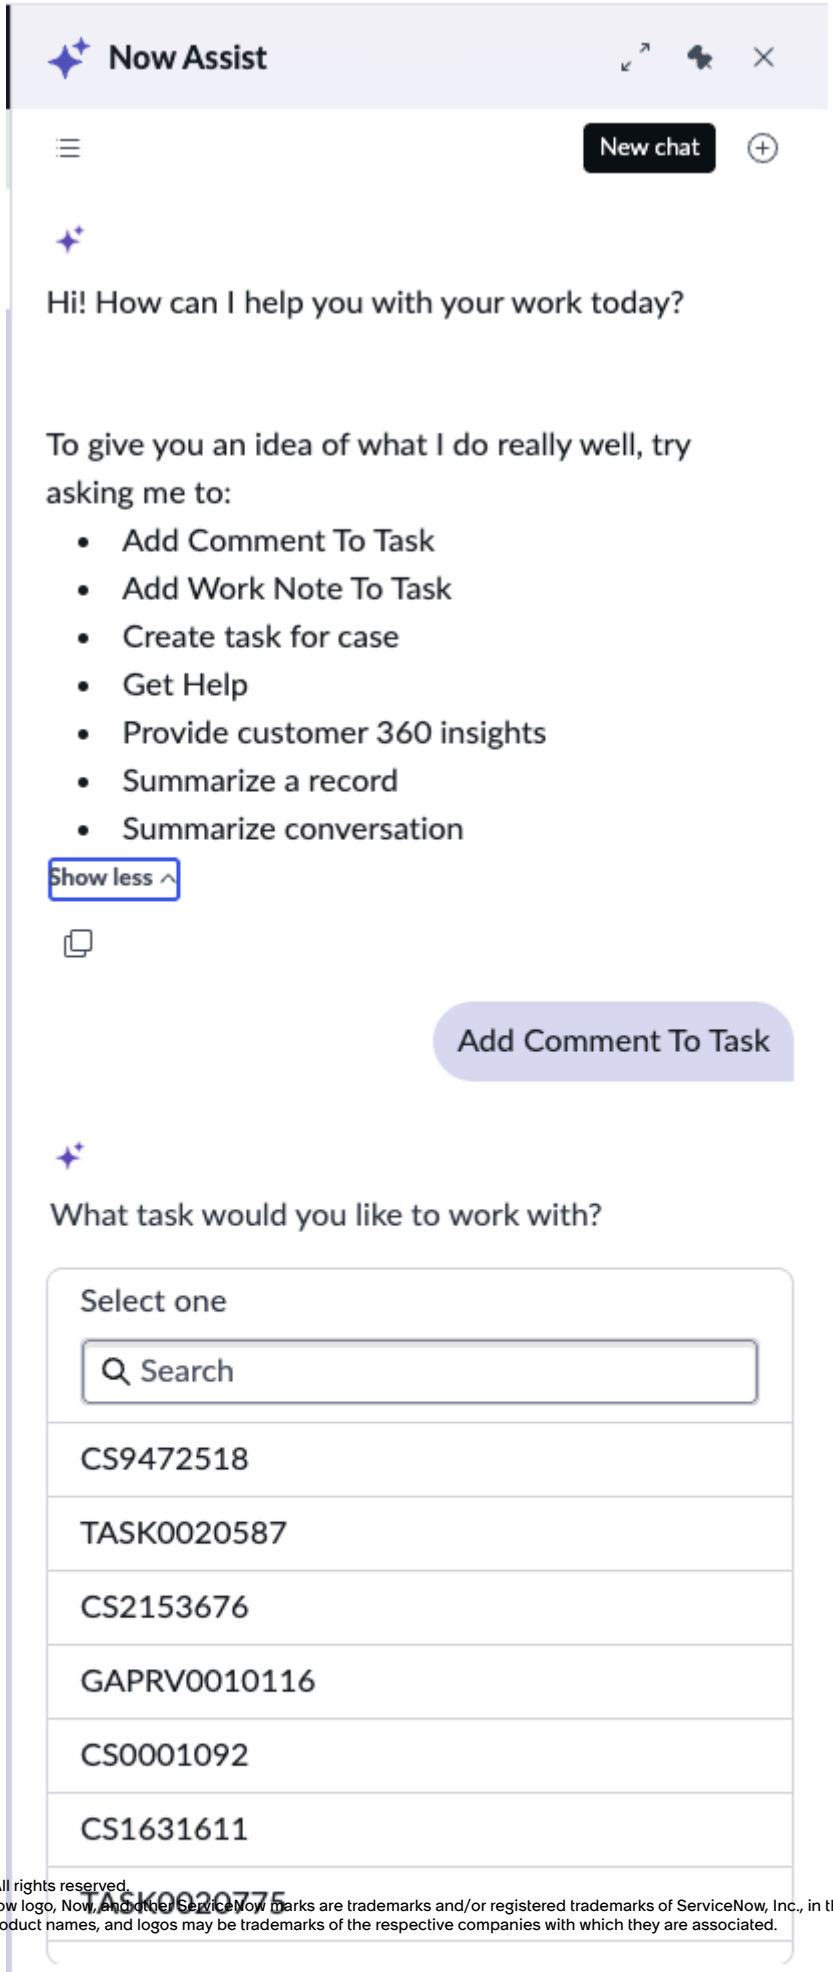
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workspaces** > **CSM/FSM Configurable Workspace**.
2. Log in to an instance where the Now Assist for CSM application is installed.
3. Request the generative AI capabilities in CSM for an interaction or case by selecting the Now Assist icon .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist panel



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. After you request the generative AI capabilities, you can summarize a chat for an interaction, summarize a chat for a case created from an interaction, summarize a case, generate the resolution notes for a case, summarize a call, generate a knowledge article, ask questions about a case, use AI agents to complete cases, and complete tasks with conversational subflows and actions.

5. You can also use the Now Assist panel to type in a question related to a case and complete tasks with conversational subflows and actions.
   Information requested about the case is shown. Conversational subflows and actions capture users' intents when requesting to run specific subflows and actions, along with all necessary details for those subflows and actions. This streamlines the user experience by enabling them to accomplish everything in one place within the Now Assist panel.

Use sentiment analysis dashboard

Visualize and interpret customer sentiment across cases using the sentiment analysis dashboard and GenAI insight cards.

The sentiment analysis dashboard provides a comprehensive view of customer sentiment across cases and accounts. It includes visualizations, filters, and GenAI-generated insights to help identify sentiment trends, root causes, and performance across channels and assignment groups.

Entry Point Widget

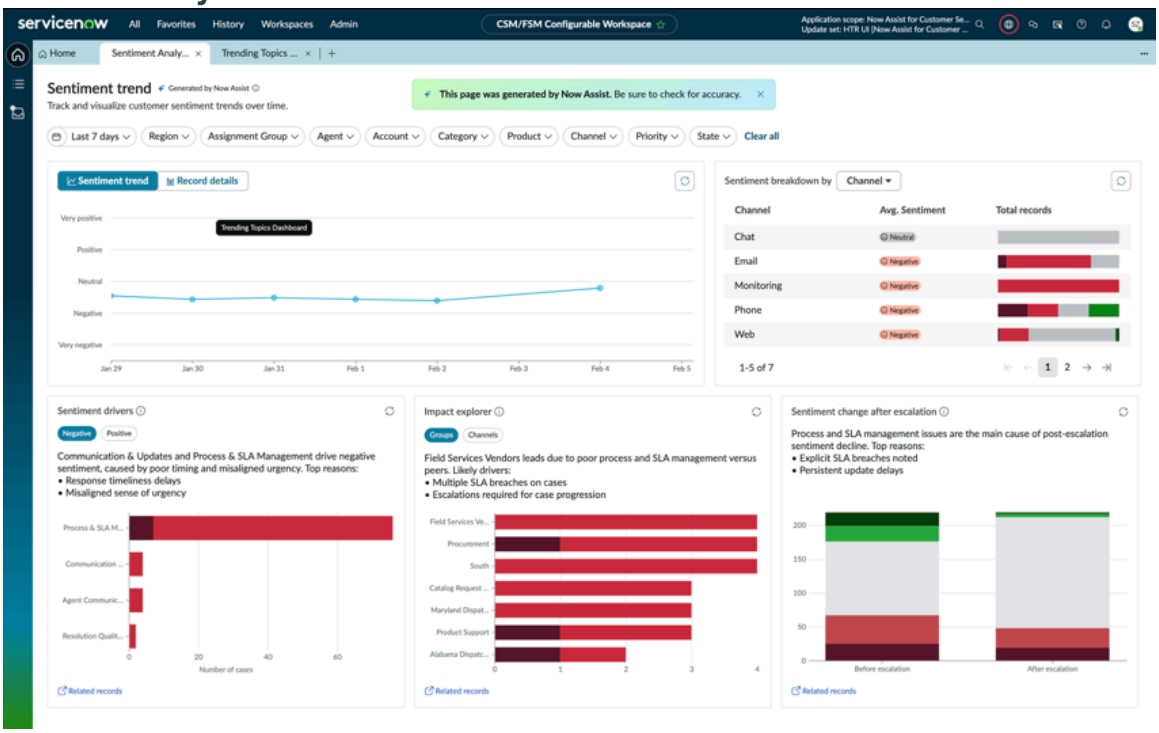
The sentiment snapshot widget can be accessed from the CSM Configurable Workspace and Workforce Optimization home page. It displays a preview of the dashboard of the sentiment trend over time, using the average sentiment score per day. You can access more detailed information by selecting **View dashboard** and navigate to the details page.

Note:

- The sentiment analysis dashboard can only be managed by customer service managers. The sentiment analysis case skill must be activated so that future cases can pick up sentiment.
- The entry point in Core UI to access the sentiment analysis dashboard is **Customer Service** > **Now Assist Dashboards** > **Sentiment Analysis Dashboard**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sentiment analysis dashboard



In-depth View Page – Data Visualizations

Function	Description
Sentiment trend	Displays the average sentiment score per day over time.
Record details	Displays the distribution of cases from very positive up to very negative.
Sentiment breakdown	Displays sentiment breakdown by Region, Assignment Group, Account, Agent, Category, Product, Channel, Priority, State, and also includes average sentiment and total records data.
Bar Chart	Displays sentiment split across categories in **Record details**.
Chart Toggle	Switches between line and bar chart views in **Sentiment trend** and **Record details**.
Time Filters	Supports Last 7 days, Last 30 days, Last 3 months, Last 6 months, and custom range filtering options.

GenAI generated Insight Cards

GenAI insights provide explanations for sentiment trends and root causes in different cases. These insights include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Sentiment drivers**: Displays the factors that most frequently influence negative customer sentiment. The insight is across the date range and displays a reason why cases in these categories were showing that sentiment.
- **Impact explorer**: Displays the groups impacted by the highest volume of records among the top 10 trends.
- **Sentiment change after escalation**: Displays the comparison of customer sentiment before and after a case escalation.

Note:

- All these insights look into each case's short description and the last 10 days of comments and work notes to generate these insights.
- Select **Related records** to open a new page with a list that shows the corresponding cases referenced in the graph. Select the refresh icon to see the latest update.
- Select **Clear all** to reset the insights to their default state.

AI alerts and gradient theme in dashboard

An AI tagline alert with the AI gradient color theme is available in the dashboard to indicate that these pages are fully generated by Now Assist. You can dismiss the alert by selecting the X on the banner. This experience is accessible through entry points in both the CSM Manager Workspace and the Workforce Optimization Dashboard.

Function	Description
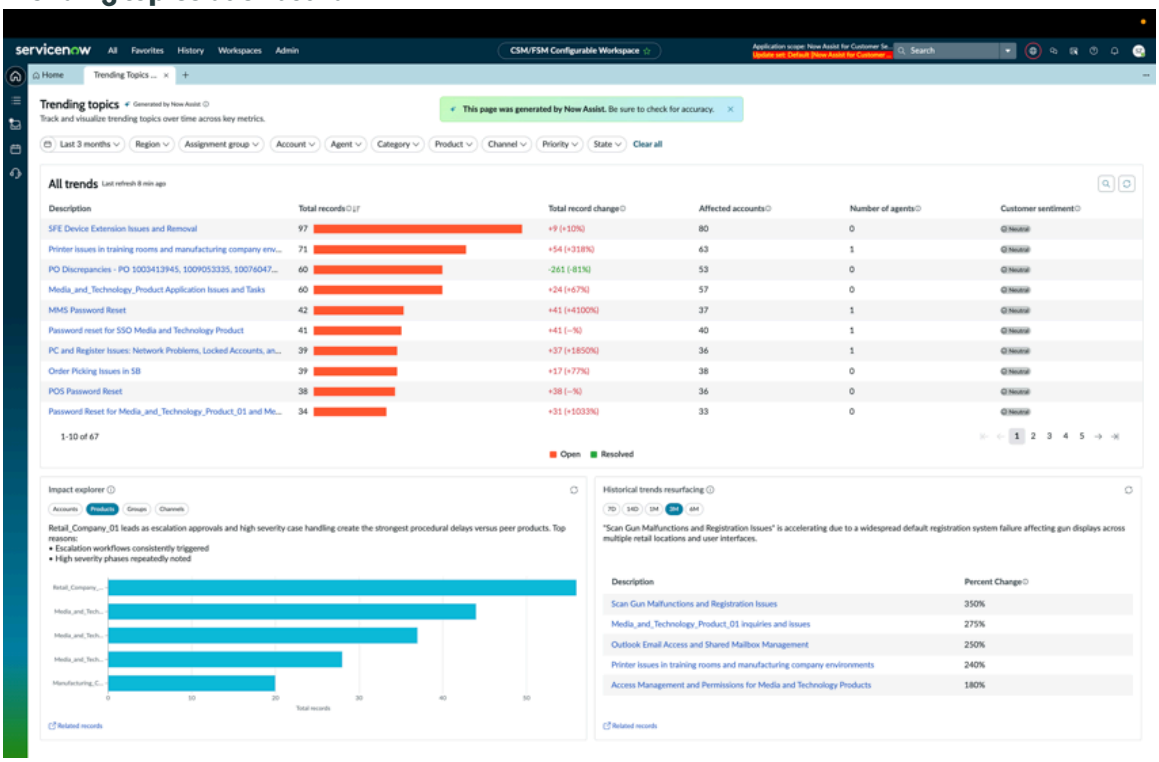
AI alert	Indicates that the pages are fully generated by Now Assist
Search	Improves information discovery and navigation.
Pagination	Improves performance and user experience by loading and displaying large datasets in smaller, manageable chunks.

In-depth View Page Structure

The in-depth view page shows **Data Visualizations** and **GenAI Insight Cards**.

Trending topics dashboard



Data Visualizations – List View

Displays the top 10 trending topics with the following attributes:

- Topic description
- Total records
- Total record change
- Affected accounts
- Number of agents
- Customer sentiment

Filters include:

- Region, Assignment Group, Account, Agent, Category, Product, Channel, Priority, State
- Time period: Last 7 days, Last 6 months, Last 30 days, Last 3 months, Last 12 months, and Custom range

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can select a topic description link to view trends over time in more detail based on the following filters:

- Region, Assignment Group, Account, Agent, Category, Product, Channel, Priority, State.
- Time period: Last 7 days, Last 6 months, Last 30 days, Last 3 months, Last 12 months, and Custom range

The dashboard provides several key features to analyze and understand record trends and case status.

Trend over time:

- Record Trend Chart: Visualize the total records on a specific date.
- Record Details Chart: Examine the case status of various cases on a particular date.

Trend Breakdown: Trend analysis can be segmented by multiple categories, including, Region, Assignment Group Account Agent Category Product Channel Priority State.

Affected regions trend insights: For each region, you can view:

- Average trend score
- Record count by trend bucket

This breakdown shows trends across different dimensions and regions.

GenAI generated Insight Cards

Automatically generated insights give you information about general trends and include:

- **Impact explorer**- Displays accounts, products, assignment groups, and channels that are impacted by the highest volume of records among the top 10 trends.
- **Historical trends resurfacing**- Displays trends that didn't have any open records in the last year and recently resurfaced open records.

You can select **Related record** to open a new page with a list that shows the corresponding cases referenced in the graph and select the refresh icon to see the most recent update.

AI alerts and gradient theme in dashboard

An AI tagline alert with the AI gradient color theme is available in the dashboard to indicate that these pages are fully generated by Now Assist. You can dismiss the alert by selecting the X on the banner. This experience is accessible through entry points in both the CSM Manager Workspace and the Workforce Optimization Dashboard.

Generate activity stream responses

Generate recommendations for work notes or comments in a case record using Now Assist and add them to enhance the quality of your interactions with the user.

Before you begin

These skills are inactive by default. Your administrator must enable the skills that you want to use.

Role required: sn_customerservice_agent and sn_customerservice.consumer_agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to a case record in the CSM/FSM Configurable Workspace or Core UI where you want to generate work notes or comments using Now Assist.
2. Select **Compose**, then select **Compose Comments** or **Compose Work Notes** from the drop down in front line case page.
   If you haven't switched to the front line case page, you can also do the same actions in **Work notes** or **Comments** tabs.

   a. Select the Sparkle icon ✦.

      The following four options appear:

      - **Acknowledge task**: Confirm receipt and understanding of the customer's request or issue.
      - **Follow up**: Reconnect with the customer to check progress or ensure resolution.
      - **Post response**: Provide a clear, timely reply to the customer's query or concern.
      - **Summarize actions taken**: Create a summary of all steps taken to resolve the case.

      Note:
      The options display based on the configurations by your admin. Under work notes only 3 options are available – Post response, Summarize actions taken and Follow up.

   b. Select one of the options based on the type of response you want Now Assist to generate. The response appears in the Now Assist Context Menu (NACM).

   c. You can select the **Refine** menu and elaborate, shorten, or change the tone of the response.

3. Select **Insert**.

Use automated quality assurance dashboard as a live agent

The automated quality assurance dashboard provides GenAI-generated quality insights for individual agents, including time-based filters, trend analysis, category and parameter breakdowns, with a detailed list of reviewed cases.

Overview of automated quality assurance dashboard

The automated quality assurance dashboard is accessible from the CSM workspace landing page. An alert with an AI gradient theme indicates that page content is generated by AI. The dashboard focuses on individual live agent data, summarizing average QA score and cases reviewed, exposing trends based on QA score and category, and providing breakdown views across categories and parameters.

Live agent Access

Live agents have limited access to QA reviews:

- **Permitted:** Live agent can view QA data only if the skill is enabled by an admin, live agent role is selected in the skill configuration, and the case was closed by that live agent.
- **Restricted:** Live agents cannot access QA reviews for cases closed by other live agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dashboard Overview

When you select the entry point, the **Automated quality assurance** tab opens. The dashboard presents comprehensive quality metrics and insights specific to the logged-in live agent's performance.

Dashboard Components

Widget	Description
Alert Indicator	Displays an AI gradient theme to indicate AI-generated content.
Average QA Score	Summary metric showing the live agent's average quality assurance score.
Cases Reviewed	Total count of cases that have undergone quality assurance review.

Trends Analysis

The dashboard enables viewing of **Average QA score** and **Cases reviewed** metrics across multiple time ranges. Predefined time periods include Last 7 days, Last 30 days, Last month, Last quarter, Last 6 months, Last 12 months, and Last year. Custom date ranges are also supported.

The **Trends** section displays QA score and category trends with drill-down granularity options available at daily, weekly, monthly, quarterly, and yearly levels.

Breakdown Analysis

The **Breakdown** section presents category-level and parameter-level performance data. Scores are displayed for each category and parameter, providing visibility into strengths and improvement opportunities. Categories can be expanded to reveal individual parameter scores nested within each category.

Widget	Description
Category Breakdown	Displays quality scores organized by quality assurance category.
Parameter Breakdown	Shows individual parameter scores within each expanded category.

Reviewed Cases List

The **Reviewed cases** list provides rich data exploration capabilities with filtering, sorting, and grouping functionality. Users can focus on specific review outcomes or time ranges. The data can be exported in PDF, JPG, or CSV formats.

Widget	Description
Filter	Allows filtering of reviewed cases by specific criteria
Sort	Enables sorting of case data by various fields
Group By	Supports grouping of cases for organized viewing

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget	Description
Export	Provides export capabilities in PDF, JPG, and CSV formats
Alert with AI gradient color theme	Highlights that the pages are fully generated by Now Assist. You can dismiss the alert by selecting the X on the alert banner.

Use automated quality assurance dashboard as a manager

Access the automated quality assurance dashboard from the CSM Configurable Workspace to view detailed agent performance metrics and quality assurance scoring data.

Before you begin

Role required: Manager

Before you begin, confirm you have:

- Manager role permissions in CSM
- Access to the CSM Configurable Workspace

About this task

The automated quality assurance dashboard provides managers with detailed insights into individual agent performance metrics. This view displays comprehensive QA scoring data at both the agent and case levels, enabling you to monitor, evaluate, and provide feedback on agent interactions.

The automated quality assurance widget serves as an entry point to access the quality assurance supervisor dashboard and is available on the CSM Configurable Workspace.

Procedure

1. Log in to CSM Configurable Workspace.
2. Navigate to the dashboard.
   The dashboard displays various widgets and tools relevant to your management responsibilities.
3. Locate the **Quality assurance (QA)** widget on your dashboard.
   The widget typically displays a summary of recent quality assessment data, including key metrics such as average quality scores and evaluation counts.
4. Select **View dashboard** in the widget to access the detailed quality reports.
   The automated quality assurance dashboard opens, providing access to comprehensive quality assurance tools and reports.
5. Review the quality reports for your agents.

   Available actions include:

   - View individual agent quality scores and evaluations
   - Filter reports by date range, agent, or quality parameters
   - Analyze trends in quality performance over time
   - Identify coaching opportunities based on quality assessment results
   - Export reports for further analysis or documentation

Result

From the quality assurance dashboard, you can monitor team performance, review quality metrics, and manage quality assurance processes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Agent's table presents average Auto QA scores and category scores for each agent. Each category score represents the average of all parameters within that category.

You can use the following features to manage data:

- **Filters:** Use the condition builder to filter by any column
- **Group By:** Organize data by any column
- **Sort:** Arrange data by any column
- **Search:** Find specific information across columns
- **Export:** Download data as PDF, JPG, or CSV

Note:

- Agent performance is rated on a 1-5 scale with color-coded visual indicators. Managers can modify any parameter score as needed.
- When AI-generated content is present, an alert indicator and AI tagline appear at the top of the review. When you manually edit parameter scores or feedback, the AI tagline is removed and the card component switches to a standard card.
- When navigating from the dashboard to the case-level view, managers can perform actions such as viewing detailed feedback for a specific case and editing QA parameters to adjust scores for individual evaluation parameters.
- The Category Trend Analysis view includes a drop down where one category is selected by default. Managers can choose any category from the drop down to view its performance trends. Once selected, the trend data updates to display the chosen category's score over time.
- AI alert with AI gradient color theme highlights that the pages are fully generated by Now Assist. You can dismiss the alert by selecting the X on the alert banner.

Create a case based on service definition recommendations

Use Now Assist to view AI-predicted service recommendations based on the context of an interaction record, such as the short description or description, and create cases based on these recommendations.

Before you begin

These skills are inactive by default. Your administrator must enable the skills that you want to use.

Role required: sn_esm_agent

Procedure

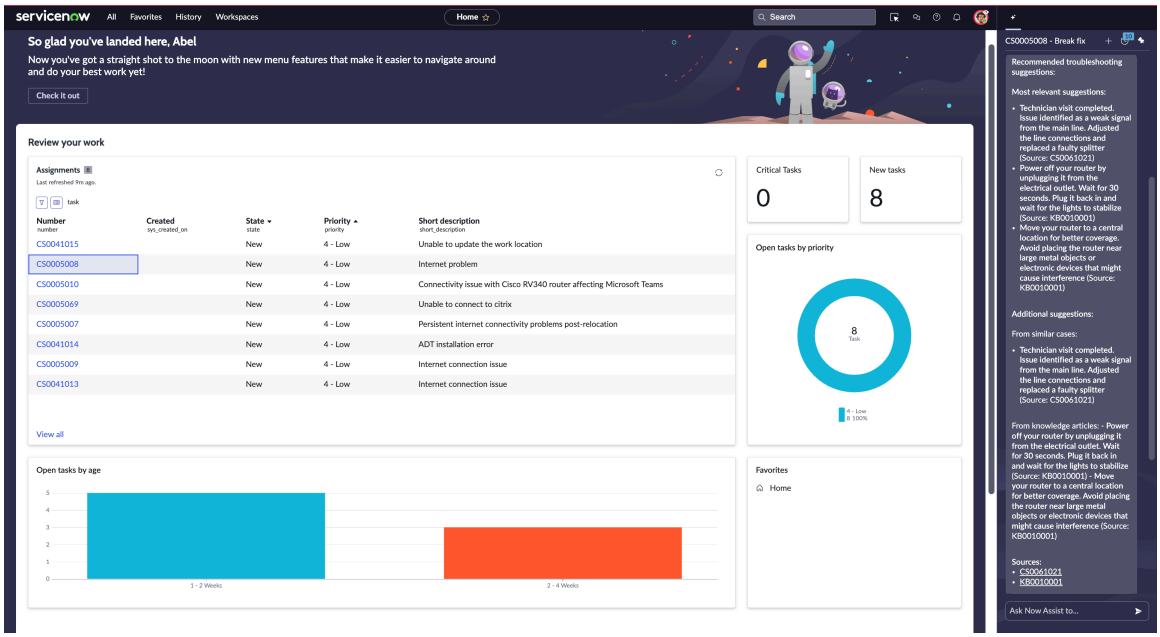
1. Navigate to an interaction record in the CSM/FSM Configurable Workspace or Core UI where you want to create a case based on a service recommendation using Now Assist.
2. Select **Create Case.**
   The case type selector modal displays, with the **AI predictions** section at the top of the modal.
3. Select a service from the AI predictions, and then select **Create case**.
   A case is created for the selected service.

Using Troubleshooting steps identification AI agent

The Troubleshooting steps identification AI agent fetches the context from a case, identifies the missing context by comparing it with knowledge articles, similar cases, and standard operating documents, and then proposes additional troubleshooting steps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Troubleshooting steps identification AI agent overview



This agent is typically used in standalone mode. Any agentic workflow that interacts with Customer Service Management (CSM) cases can use it.

This AI agent does the following actions:

- Gathers the context from the case, including the attempted steps.
- Identifies the missing context by analyzing the similar cases, knowledge base articles, and Standard Operating Procedure (SOP) documents that are attached to knowledge base articles.
- Proposes additional troubleshooting steps.

Agentic workflows can access this AI agent in Core UI or CSM/FSM workspace.

Configure AI Search for the Troubleshooting steps identification AI agent

You must configure AI Search so that this AI agent can fetch similar cases and relevant knowledge articles For more information, see Configure AI Search to use with the Troubleshooting steps identification AI agent and Configure the Troubleshooting steps identification AI agent to use the Search retrieval tool.

Limitations

The document types supported for AI Search and document processing are:

- Microsoft Word (.docx)
- Plain Text (.txt)
- Portable Document Format (.pdf)

When fetching text from knowledge articles, this AI agent can fetch only the **article_body** field from the kb_knowledge table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access control lists (ACLs)

Access Control Lists (ACLs) are preconfigured for the troubleshooting steps identification AI Agent, including their associated flows and actions. By default, ACLs are configured for the sn_esm_agent role. Customers can modify these ACLs to align with their specific business requirements and security policies.

To manually update ACLs for custom roles:

1. Go to the **sys_security_acl** table.
2. Use filters to locate ACLs related to your use case, AI agent, and internal flows or actions.
3. Add your custom role to each relevant ACL record.

Using agentic AI in Now Assist for Customer Service Management (CSM)

The Customer Service Management (CSM) AI Agent Collection provides a set of prebuilt, fully configured AI agents and agentic workflows designed to address common Customer Service Management scenarios.

These model examples combine autonomous and supervised flows to perform multi-step actions using advanced reasoning, triggered by customer cases, conversations, or detected intents. Built on the ServiceNow AI Platform, the agents leverage capabilities such as Knowledge Graph, Flow Designer, scripting, Topics, Catalog Items, Retrieval-Augmented Generation (RAG), record operations, web search, and generative inputs. Powered by AI Agent Fabric and Workflow Data Fabric, the collection operates seamlessly across systems without dependency on data location, while Guardian enforces guardrails for security and compliance. By offering ready-to-use building blocks, it helps guide and automate complex processes, reduce agent friction, and free human agents to focus on higher-value work—ultimately accelerating resolution times and enhancing customer experience.

Available agentic workflows for Customer Service Management agent collection

Agentic workflow	Description	Available AI agents
Triage cases	Handles end-to-end case or case type validation, creation, verification, and escalation. It can also retrieve relevant context and details from the provided case or interaction to address customer inquiries directly and avoid unnecessary case creation.	• Triage cases WrapUp • Context validator • Informational queries • Case creation • Entity extraction • Document verification • Email response

© 2026 ServiceNow, Inc. All rights reserved.

Available agentic workflows for Customer Service Management agent collection (continued)

Agentic workflow	Description	Available AI agents
Provide customer 360 insights	Provides agents with real-time, context aware responses to queries on customer data, case details, product information, catalog entries, and interaction history, using multi-turn Q&A to maintain conversational context and accuracy.	• Customer insight AI Agent • Case action AI Agent
Complaint Case AI Agent collection	Automate and enhance the complaint resolution process by gathering missing information, detecting customer sentiment, categorizing complaints, and proposing resolutions. It supports human agents by managing complaint intake, triage, research, resolution, and ongoing communication, reducing manual effort and case closure time.	• Complaint case intake agent • Complaint case triage agent • Complaint case research agent

Supported Large Language Models

Note:

You can use Now LLM Service, Now LLM Long Term Stable models (LTS), Azure OpenAI, Google Gemini or Anthropic Claude on AWS as the AI model provider for all Now Assist skills and AI agents. Use the Configuration Controls in AI Control Tower to define which options are available, then set the skill-level preferences in the Now Assist Admin console. For more information, see Large language models on the ServiceNow AI Platform®.

Security implementation considerations

Enable security implementation to execute AI agents and agentic workflows through Access Control Lists (ACLs) and user identities. For more information, see Implement access control in Now Assist AI agents

Considerations for running the autonomous AI Agents

Important:
By default, all agentic workflows and AI agent records are read only.

To run the AI agents autonomously, you must first duplicate the agentic workflow, and then proceed with the following steps:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Activate the agentic workflow.
- Activate all agents within the agentic workflow.
- Activate the trigger to invoke the agentic workflow automatically. If you prefer to invoke it manually, activating the trigger isn't necessary.

Standalone AI agents

Looking for an AI agent?

- There might be AI agents installed with the Now Assist application that are not used in agentic workflows. To learn how to see all agents that are available on your instance, see Find AI agents.
- To find agents that might not be installed on your instance, visit the AI Agent Marketplace on the ServiceNow Store.

Customer Service Management AI agent collection triage cases agentic workflow

Use CSM AI agents agentic workflow to process all routine cases coming in through email and other offline channels and increase agent productivity through faster resolution.

Triage cases overview

Using the Triage cases agentic workflow, handle end-to-end validation, creation, verification, and escalation of cases or case types. Get the correct information from the case or interaction to answer customer questions directly and reduce the number of cases that must be created.

Refer to the information provided here on agents, tools, and triggers that are related to the Triage cases agentic workflow in AI agents for Customer Service Management.

To modify the Triage cases agentic workflow duplicate it, and adjust the settings according to your requirements. You can activate the agentic workflow template by making triggers active and setting the display settings to include the Now Assist panel.

> **Important:**
> When you modify an agentic workflow, AI agent, or tool, make sure that you update all instructions accordingly.

Triage cases agentic workflow

Triage and provide faster resolution for all the routine cases coming in through email and other offline channels.

To access the agentic workflow:

1. Navigate to **All** > **AI Agent Studio** > **Create and manage.**
2. Select **Triage cases**.

Access control lists (ACLs)

Access Control Lists (ACLs) are preconfigured to support the Triage use case, including AI agents and their associated flows and actions, such as the Document Verification Agent. By default, ACLs are configured for the sn_esm_agent role. Customers can modify these ACLs to align with their specific business requirements and security policies. For more information, Configure security controls for a skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When updating the agent role for the Triage Cases Agentic Workflow, it's important to also update the corresponding Access Control Lists (ACLs) to ensure proper permissions. To manually update ACLs for custom roles:

1. Go to the **sys_security_acl** table.
2. Use filters to locate ACLs related to your use case, AI agent, and internal flows or actions.
3. Add your custom role to each relevant ACL record.

Triage cases AI agents

The following tables list the agents that are used in the Triage cases agentic workflow.

Important:
In the **Define availability** screen for the AI agent, make sure that the **Status** field is enabled to activate the AI agent.

AI agents and their roles in the Triage cases agentic workflow

AI agent	AI agent role
Triage cases WrapUp	Wrap up the case triage process using the Triage Cases Wrapup AI Agent. It synthesizes the execution details and posts the summary to the work notes of the source record to ensure traceability and closure.
Context validator	Validate the content of a record using the Context Validator AI Agent. It analyzes sentiment and identifies a list of intents from the input record. Invoke this agent whenever record content requires validation and intent classification.
Informational queries	Create a summary of all answers related to informational intent using the Informational Queries AI Agent. It retrieves a list of all intents, then processes each informational intent individually before generating the final summary. Invoke this agent whenever a consolidated response to informational queries is required.
Case creation	Automate and manage the end-to-end process of case creation using the Case creation AI agent. Invoke this agent whenever a case needs to be created.
Entity extraction	Extract entities from emails and documents using the Entity Extraction AI Agent. It matches the extracted entities against a predefined allowlist of fields to ensure relevance and accuracy. Invoke this agent whenever entity-level information needs to be identified and structured from unstructured content.
Document verification	Verify documents on a record using the Document Verification AI Agent to determine whether they match the required list for the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

AI agents and their roles in the Triage cases agentic workflow (continued)

AI agent	AI agent role
	case type. It identifies any missing documents or verification failures. Invoke this agent whenever document validation is needed.
Email response	Generate and send email responses using the Email Response AI Agent. It acts as a response assistant to draft, display, and deliver email replies. Invoke this agent whenever an automated email response is required.

Role masking

Required role: B2B agents (sn_customerservice_agent) and B2C agents (sn_customerservice.consumer_agent)

Important:
To access data in the agentic workflow, the admin role must include the specified roles under **Contains roles**.

Role masking enables users to limit the roles and privileges of agentic workflows during tool execution. Agentic workflows and their AI agents that get installed with Now Assist applications are assigned pre-defined roles. If you select *`Users with specific roles`* for user access, you must configure the security controls to include these roles. Data access settings must also include these roles. For the instructions to change the security controls, see Define security controls for an agentic workflow.

In the data access settings, you must also add the necessary roles to access the cases that need triaging. For example, you can add the csm role to the agentic workflow's list of approved roles so that it can access case records.

Triaging the case

In the triaging the case agentic workflow, perform the following steps:

1. In **Define key requirements** the workflow's purpose is clearly described and its steps with specific actions and criteria for each is outlined.
2. In the **Define security controls** screen, you can set the access at user and data level.

   a. **Define user access**: Specify which users can access and interact with the agentic workflow. Once you save your selections, the system automatically generates an Access Control List (ACL).

   b. **Define data access**: Choose the user identity under which the Provide customer 360 insights agentic workflow will run. This determines the roles and associated data access permissions.

   Note:
   Choose the user identity this agentic workflow should run as to determine the roles and the data access permissions derived from them. Remember, when agentic workflows can access data, they can also share that data with the human user who interacts with them. Agent level role mask are: B2B agents (sn_customerservice_agent) and B2C agents (sn_customerservice.consumer_agent).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In **Add triggers** you can set up optional triggers to launch the agentic workflow automatically without a user request. Triggers can be based on conditions or schedules you define and initiate agentic AI experiences.

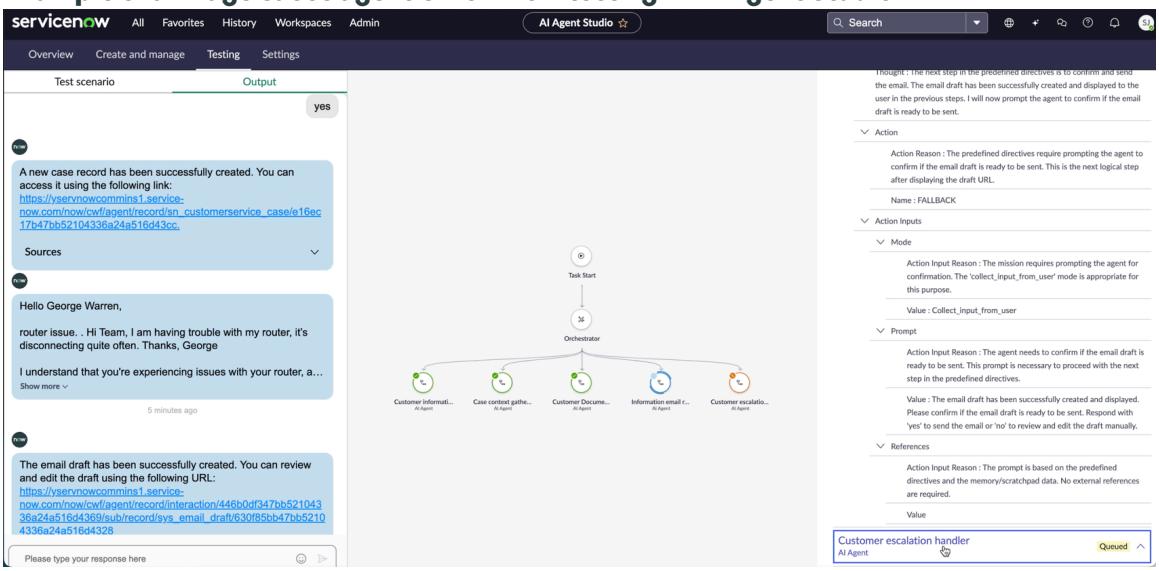
b. In **Select channels and status**, you can choose the channels where this agentic workflow will be available to engage with users who initiate interactions. Toggle the display for **Engage via the Now Assist panel** to see the agentic flow in Now Assist panel.

> **Note:**
> To turn off the agentic workflow, toggle off **Engage via the** *Now Assist* **panel**.

c. Select **Save and test**.

The agent executes the **testing** in AI Agent Studio for the agentic workflow.

Example of a Triage cases agentic workflow testing in AI Agent Studio



In the Now Assist panel, the agent receives a notification as soon as the interaction is generated, which enables them to follow the on-screen instructions and complete the task. For more information, see Request the generative AI capabilities in Customer Service Management by using the Now Assist panel.

Customer Service Management AI agent collection provide customer 360 insights

Provide Customer 360 insights agentic workflow is a GenAI-powered assistant that helps agents answer natural language questions about customers, cases, products, catalogs, and past interactions with a seamless multi-turn Q & A experience.

This workflow enables agents to retrieve case details, customer information, and perform actions such as case creation, modification, escalation, and closure using natural language queries. It supports real-time context-aware responses and respects role-based access controls.

Provide customer 360 insights agentic workflow overview

The Provide Customer 360 insights agentic workflow is a GenAI-powered assistant that helps agents to resolve cases more efficiently and effectively. By answering natural language questions about customers, cases, products, catalogs and past interactions, it provides contextual insights

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

that enable agents to make informed decisions and solve issues faster. It provides a seamless, multi-turn Q&A experience, helping agents to:

- Ask follow-up questions and get context-aware responses in real time.
- Access critical customer details and history to make informed decisions.

This feature consolidates scattered user and case data, providing agents with timely, accurate insights to make informed decisions, reducing Mean Time To Resolve (MTTR) and helping to solve issues. If something isn't found, the GenAI responds clearly. For example, "I couldn't find any recent catalog interactions for this customer". If the question is outside its scope, it redirects.

Provide Customer 360 insights agentic workflow

Customer 360 insights agentic workflow is set up as a promoted asset in the Now Assist panel.

This workflow manages all case-related queries and actions, including retrieval of case details, history, timelines, assignments, status, customer information, sentiment analysis, related cases, knowledge articles, and case updates. It supports natural language requests for specific case numbers, aggregates comprehensive case and customer data, analyzes historical patterns and sentiment, and executes case management operations such as creation, modification, escalation, and closure.

Role masking

Required role: B2B agents (sn_customerservice_agent) and B2C agents (sn_customerservice.consumer_agent)

Important:
To access data in the agentic workflow, the admin role must include the specified roles under **Contains roles**.

Role masking enables users to limit the roles and privileges of agentic workflows during tool execution. Agentic workflows and their AI agents that get installed with Now Assist applications are assigned pre-defined roles. If you select *`Users with specific roles`* for user access, you must configure the security controls to include these roles. Data access settings must also include these roles. For the instructions to change the security controls, see Define security controls for an agentic workflow.

In the data access settings, you must also add the necessary roles to helps agents to resolve cases more efficiently and effectively. For example, you can add the csm role to the agentic workflow's list of approved roles so that it can access case records.

Setup Provide customer 360 insights Agentic Workflow

To configure the Provide customer 360 insights agentic workflow, perform the following steps:

1. Navigate to **All** > **AI Agent Studio** > **Create and manage**.
2. Select **Provide Customer 360 insights**.
3. In **Define key requirements** the workflow's purpose is clearly described and its steps with specific actions and criteria for each is outlined.
4. In **Define security controls** you can set the access at user and data level.

Access Control lists (ACLs)

Access Control Lists (ACLs) are preconfigured to support the Provide customer 360 insights use case, including AI agents and their associated flows and actions, such as the Customer insights Agent. By default, ACLs are configured for the sn_esm_agent role. Customers can modify these ACLs to align with their specific business requirements and security policies. For more information, Configure security controls for a skill.

When updating the agent role for the Provide customer 360 insights Agentic Workflow, it is important to also update the corresponding Access Control Lists (ACLs) to ensure proper permissions. To manually update ACLs for custom roles:

1. Go to the **sys_security_acl** table.
2. Use filters to locate ACLs related to your use case, AI agent, and internal flows or actions.
3. Add your custom role to each relevant ACL record.

AI agents used in Provide customer 360 insights agentic workflow

The following tables list the agents that are used in the Provide customer 360 insights agentic workflow.

AI agents and their roles in the Provide customer 360 insights agentic workflow

AI agent	Actions
Case action AI Agent	Perform customer-related actions, including case operations such as creating case tasks and updating work notes.
Customer insight AI Agent	Answer questions related to the record by retrieving comprehensive information, including customer details (name, contact info, location, history, cases, orders) and case data (next steps, actions, assigned agent, notes, documents, tasks, resolutions), along with other relevant attributes.

Use Provide customer 360 insights Agentic Workflow

The Provide customer 360 insights agentic workflow in Now Assist for Customer Service Management (CSM) gives agents contextual, GenAI-driven insights about customers directly within a case. By selecting the Now Assist icon in a case record, agents can access the Now Assist panel that delivers real-time insights based on customer data.

Agents can ask natural language questions, such as "What products is this customer currently using?" The AI agent responds with accurate, contextually relevant answers and maintains conversational context across multiple questions.

Key features

Feature	Details
Contextual Insights	AI retrieves and summarizes information from multiple sources, including:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key features (continued)

Feature	Details
	• Case details (status, priority, age, assignees, notes). • Customer info (account details, recent activity). • Products and services they own. • Catalog items they interacted with. • Past interactions (calls, chats, emails). • Actions taken (resolution steps, escalations, KBs shared).
Handling	If data is unavailable or ambiguous, AI communicates clearly, for example, I couldn't find any recent catalog interactions for this customer. For out-of-scope questions GenAI declines and redirects.
Security	GenAI respects role-based access controls and does not surface restricted information.
Feedback Loop	Agents can give thumbs up or thumbs down or flag inaccurate responses for retraining.

Customer Service Management accelerate complaint case handling AI agent collection

The Accelerate complaint case handling agents can work alongside human complaint agents to intake complaints, triage complaints, summarize cases, and answer research queries. The agents review previously attempted troubleshooting steps and propose resolution plans based on similar complaint cases or knowledge articles.

The Accelerate complaint case handling collection includes AI agents, skills, and a specialized AI workflow that systematically analyzes complaint cases, determines optimal processing paths, and coordinates seamless hand-offs between specialized sub-agents. This agent excels at complaint intake, contextual triage, prioritization logic, and ensuring comprehensive case resolution based on case state, complexity factors, and historical resolution patterns.

AI agents used in the Accelerate complaint case handling collection and the Accelerate complaint case handling agentic workflow

The accelerate complaint case handling collection and agentic workflow uses a team of AI agents and skills to triage customer complaints, summarize cases, and help research customer cases. The complaint case intake agent is not part of the agentic workflow, since it is used with Virtual Agent.

To install the AI agents and skills for the Accelerate complaint case handling collection, see Install the Now Assist for Complaint Case (CSM) application.

For more information on configuring the Accelerate complaint case handling agentic workflow, see Configure the Accelerate Complaint Case Handling agentic workflow.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

AI agents and skills and their roles listed in the order of execution

Agent	Description
Complaint case intake agent	Manages customer complaints by collecting relevant information, such as customer details, the nature of the complaint, and any supporting documentation, before initiating the resolution process.
Complaint case triage agent	Derives category, subcategory, and priority of the case. The agent also analyzes tone, sentiment, word choice, and speech patterns to detect frustration of the customers. It uses this information to determine the priority of the case.
Complaint case research agent	Helps the human agent by providing the best answer to research queries. It retrieves relevant knowledge base articles and similar cases, and if needed, gets relevant information from other systems to give accurate answers and create case tasks based on the context.
Complaint case summarization skill	Produces structured summaries of complaint cases surfacing complaint-specific context, including the product or location at the center of the complaint, related parties involved, key actions taken, and SLA urgency ranked by time remaining. The skill allows agents to understand the full complaint picture without reading through the entire activity stream. It is especially valuable during complaint intake reviews, escalations, cross-team handoffs, or when returning to an active complaint after a period of inactivity.

Install the Now Assist for Complaint Case (CSM) application

You can install the Now Assist for Complaint Case (CSM) application (sn_cmpl_gen_ai) if you have the admin role.The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Confirm that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Complaint Case AI Agents collection application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The following item is installed with Now Assist for Complaint Case (CSM): Plugin: Complaint Case AI Agent collection (sn_complaint_ai)

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Now Assist for Complaint Case (CSM) application (sn_cmpl_gen_ai) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   A list of the versions available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

Configure the Accelerate Complaint Case Handling agentic workflow

Configure the Accelerate Complaint Case Handling agentic workflow by defining key requirements and security controls. The workflow is then tested and made available through various channels.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **AI Agent Studio** > **Create and manage.**.
2. Select **Accelerate Complaint Case Handling**.
3. Define the key requirements.
   For more information on defining key requirements, refer to General guidelines for creating AI agents and agentic workflows.
   a. Write a clear description and list of steps.
   b. Add AI agents that can perform these steps or ask Now Assist to suggest AI agents.
   c. From the list, select any LLM providers that this agentic workflow does not support.
   d. Select **Save and continue**.
4. Define the security controls for this workflow.

   a. Define user access.
   These include the following:
   - Any authenticated user: Any logged-in user can access this AI agent.
   - Users with specific roles: select specific roles that can access this AI agent.
   - Public: anyone can access this AI agent, even if they are not logged in.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Define data access: Select the user identity type this agentic workflow will run as. These include the following:

- Dynamic user: This can be the sys_user of a trigger, agentic workflow, or user that passes its roles to this AI agent.
- AI user: This is a type of sys_user only for agentic workflows and AI agents, with pre-defined roles.

c. Select **Save and continue**.

5. **Optional:** Add triggers.

   (Optional) You can add triggers if you want an agentic workflow or AI agent to launch according to pre-defined rules, and you want to spare your users the effort of reaching out for help, add a trigger.

   If you do not add triggers, the workflow executes only in response to users' requests for help.

6. Select channels and status.

   Select the channels where you want this agentic workflow to be available for users.

   - Engage via the Now Assist panel: When users send a message to Now Assist, they can discover and use this workflow.
   - Engage via UI actions on specific records: When users select a UI action displayed on certain records, this workflow is activated.

7. Select **Save and test**.

AI voice agent in CSM

Use the AI voice agent to create cases and check case status through natural, conversational voice calls.

AI voice agent overview

The AI voice agent streamlines customer interactions by integrating with contact center platforms including Genesys and Twilio.

The AI voice agent enables customers to get case status and create cases entirely through voice commands. This solution reduces manual intervention, improves service resolution times, and delivers consistent functionality across all supported contact center partners.

Key Capabilities

The AI voice agent helps with case management by using natural, conversational voice interactions:

- Check the status of your cases just by asking.
- Create cases without filling out any forms.
- If an issue is complicated, the agent can quickly connect you to a human.
- It supports multiple languages, making it easy for customers around the world to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- All interactions are recorded for auditing and quality checks.
- Customer data stays safe and separated to protect privacy.

Benefits

With the AI voice agent, there's improvement in both customer experience and operational efficiency:

- Support teams spend less time answering routine questions because the agent handles case status checks and updates.
- Customers don't need training or knowledge of internal processes—The agent guides them.
- Customer satisfaction increases because the service is faster, easier, and more intuitive.

CSM AI voice agent

There are two AI voice agents for CSM. Each agent is associated with a voice service acting as a virtual customer service agent and can be configured with welcome messages, voice profiles, and fallback options like human agent routing or case creation. This setup enables efficient, AI-driven support for customers.

Customer Service Management AI voice agents

AI voice agent	Description
Case status	Provides users with comprehensive status updates for cases based on the case number. Designed for users who need quick and reliable access to case details, including state, creation date, assigned agent, latest update, and a summary of the case.
Create case	Lets customers log cases using voice input by guiding them through a clear, step#by#step conversation that captures and validates required details. It creates the case, and confirms successful submission.

AI voice agents are managed through AI Agent Studio. To configure a new agent:

1. Navigate to **All** > **AI Agent Studio** > **Create and manage**, then select the AI agents tab.
2. Open the **Add** drop-down list.
3. Select an AI voice agent to create a voice-enabled agent for case management.

This interface enables admins to create a AI voice agents, connect to supported contact center providers, and deploy fully functional AI voice agents for case management. For deployment and configuration info, see Deploy AI voice agents.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- To enable customer access and use of AI voice agents, an admin must install the plugin Customer Service Management AI agent collection
- To modify the AI voice agents, duplicate it, and adjust the settings according to your requirements.

Important:

- When you modify an AI agent, or a tool, make sure that you update all instructions accordingly.
- In the Define availability screen for the AI agent, make sure that the **Status** field is enabled to activate the AI agent.

Communities

With the ServiceNow® Communities application, connect, engage, and collaborate with your employees, customers, partners, and prospects. Your users get quick responses to their issues by posting questions, reviewing blogs or videos, and searching for previous discussions. It is an essential component of your self-service strategy along with Knowledge Base and Service Catalog.

Domain separation and Communities

Domain separation is unsupported in Communities. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: No support

- The domain field may exist on data tables but there is no business logic to manage the data.
- This level is not considered domain-separated.

Domain separation for service providers

Configuring communities

Configure various aspects of Communities based on the specific requirements of your organization.

Community content types

There are seven supported content types: Answer, Blog, Comment, Document, Event, Question, and Video.

Community administrators and forum administrators can configure content types at the community and forum levels.

User access to content is based on the permissions that users have. Community users can add content to the different content types and provide feedback on the content.

Content types

Content type	Description
Question	Post a question about an issue or a challenge and get answers from other users. You can submit your question on the Community homepage and choose a forum or a topic to post it in. A question can be tagged to more than one topic.
Answer	Reply to a user question or another answer with a possible solution or statement.
Blog	Post a blog on a topic of interest to share with other users. You can include images and videos.
Comment	Enter a comment to express an opinion or to react to a video or a blog.
Video	Upload a video on a topic of interest for other users. Videos appear as web URLs that link to the most popular video sites. Communities supports playback from: • YouTube – youtube.com • Vimeo – vimeo.com • DailyMotion – dailymotion.com • Facebook – facebook.com **Note:** Videos can be included in other types of content, including questions, answers, blogs, and comments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content types (continued)

Content type	Description
Document	Post a document to share with other community members. You can post your document from within a forum, choose a topic to post it in, and tag it to more than one topic.
Event	Create an event that other community users can register for and attend.

Configure blog publish schedule

Configure the publishing interval to ensure blogs are published closer to the scheduled time.

Before you begin

Role required: sn_communities.admin

About this task

The default interval for publishing blogs is 30 minutes. You can configure a shorter time so that the blog is published approximately around the scheduled time.

Procedure

1. Navigate to **All** > **System definition** > **Scheduled Jobs**.
2. Search and select `Publish scheduled content` in the name column.
3. Set the required time in the **Repeat interval** field.
   Keep the time short (for example, 5 minutes) to reduce the delay in publishing blogs from the scheduled time.
4. Click **Update**.

Community feedback types

There are two supported feedback types: Upvote and Helpful.

Community users can provide feedback on the content they have access to in the community.

Feedback types

Feedback type	Description
Helpful	Helpful feedback is associated to the following content types when a community users marks content as helpful: Blog, Video, Documents, Answer, Comment.
Upvote	Upvote feedback is associated to the Question content type when a community user marks a question as helpful.

Community access types

Access types are used to control access to a forum or a content type.

You can define the access types for a forum and a content type in a permission. There are four access types available by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access types

Access type	Description
Forum Admin	Applies to forums.
Forum Moderator	Applies to forums.
Content Read	Applies to all content types.
Content Write	Applies to all content types. Content Read access is automatically included in Content Write.

Note:
It is not recommended that you create your own access types. Advanced knowledge of Communities architecture and scripting code to support and interpret the new access type is required.

Contact Customer Service and Support for further information.

To see all available access types, navigate to **Community** > **Administration** > **Access Types**.

Platform Analytics Solutions for Communities

This Platform Analytics Solution contains preconfigured dashboards. These dashboards contain actionable data visualizations that help you improve your business processes and practices.

Use the Performance Analytics widgets on the dashboard to visualize data over time, analyze your business processes, and identify areas of improvement. With solutions, you can get value from Performance Analytics for your application with minimal setup.

Note:
Solutions include some dashboards that are inactive by default. You can activate these dashboards to make them visible to end users according to your business needs.

For unlimited access to all features of this Platform Analytics Solution, purchase a Performance Analytics subscription. For more information, see Activating your Performance Analytics subscription.

To enable the solution for Communities, an admin navigates to **System Definitions** > **Plugins** and activates the Performance Analytics - Content Pack - Communities plugin.

Related topics

Activate your Performance Analytics subscription

View the Communities performance dashboard

The Communities dashboard displays up-to-date status on community usage, membership, content type and activity, and trends by forum and by topic.

Before you begin
Role required: pa_admin

Procedure

1. Navigate to **All** > **Performance Analytics** > **Dashboards**.
2. In the list, select **Community** > **Communities Dashboard**.
   On dashboard tabs:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Content types are question, answer, comment, blog, video, or document.
- "Social activity" is any response (answer, comment, blog, video, or document) to a topic that is added by a user other than the originator.
- Content score data is for content created during the last 30 days.
- Click a scorecard to view detailed data or a trend chart.

Tabs shown in the Performance dashboard

Overview tab	Scorecards In each scorecard, the percentage change in the current period appears under the total over the lifetime of the community. ○ Number of current members and total number of questions. ○ Percentage of questions that have been marked as **Solved** by the user who asked the question. ○ Percentage of questions that have not been answered. ○ Total number of attachments (blogs, videos, and documents). Charts ○ **Community Activity**: new community members and total sessions for the month. ○ **New content** of any type. ○ **Top 3 Forums and Topics by Social Activity**: Topics and forums that have received responses from other members. Hold the cursor over an area to view the count of activity.
Content Analytics tab	For any chart, you can focus on the most popular content types, forums, or topics by selecting a **Breakdown**. ○ **New content** and count of active members who contributed content for the most recent months for the selected breakdown. ○ The top 10 items with the highest number of views for the selected breakdown.
Forum Analytics tab	○ Heat maps display data for **Content** (total current content volume), **Views** (total unique user views), and **Social Activity**. Forums are listed on the vertical axis and content types appear on the horizontal axis. ○ **Additional KPIs**: key performance indicator data for forums.
Topic Analytics tab	○ Heat maps display data for **Content** (total current content volume), **Views** (total unique user views), and **Social Activity**. Topics are listed on the vertical axis and content types appear on the horizontal axis. ○ **Additional KPIs**: key performance indicator data for topics.
Admin Analytics tab	Heat maps display data for **Number of Posts Moved** and **Featured Content**.

Forum administrator	sn_communities.forum_admin
Forum moderator	sn_communities.forum_moderator
Content creator	pa_viewer, pa_admin

Indicators

The Communities dashboard presents the following key performance indicators:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

# of members

Total number of members.

# of Questions

Number of questions created in the last 30 days.

% Marked as Solved

Number of questions created in the last 30 days, which are marked as solved.

% Not Answered

Number of questions created in the last 30 days, which were not answered.

# of Blogs, Documents, and Video

Number of blogs, documents, and videos created in the last 30 days.

Non-question content

Number of blogs, videos, and documents posted.

% With activity

Percentage of primary or secondary community content with at least one response or feedback.

Avg. # of social activities per content

Average number of activities (mark as helpful, upvote, comments, and replies) on any active primary or secondary community content.

# of contributors

Number of contributors.

New content this month

Number of new content posts in the last 30 days.

Avg. # of views per content

Average number of views of the content.

Avg. # of comments per content

Average number of comments of the content.

# of featured content

Number of content posts that have been featured.

# of Content moved from activities

Number of content posts moved from activities.

# of Content moved to activities

Number of content posts moved to activities.

Breakdowns

The following breakdowns apply to the indicators on the dashboard:

- Communities Content Type
- Communities Forum
- Communities Topic

Data visualizations

The dashboards include the following visualizations:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Title	Type	Description
Community Activity	Column	View the number of new community members and total of sessions on the community per month.
New Content by Month	Column	View the number of new content posts per month.
Top 3 Forums by Social Activity	Pie	View forums that have received responses from other members. Social activity is any response (answer, comment, blog, video, or document) to a topic added by a user other than the user that originally posted the content.
Top 3 Topics by Social Activity	Pie	View topics that have received responses from other members.
New Content by Month	Single Score	View the amount of new content, forums, or topics created per month. For any chart, you can focus on the most popular content types, forums, or topics by selecting a **Breakdown**.
Total Content Views	Column	View the number of views for each content type per month.
Forum KPIs	Single Score	View different indicators for the forums.
Topic KPIs	Single Score	View different indicators for the topics.
Number of Contents Moved	Single Score	View the number of content posts that have been moved by community administrators and community moderators per month.
Featured Content	Single Score	View the number of posts featured by different users per month.

Migrate Social Q&A data to Communities

If you want to migrate existing Social Q&A content to Communities, you can use a script to migrate the data.

Before you begin

Role required: sn_communities.admin
The Customer Communities plugin (com.sn_customer_communities) must be activated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Search for the script *Migrate Social QA to Community* and open it.
3. To enable the script, select the **Active** check box and click **Update**.
   The script is deactivated by default.
4. Click **Run Fix Script**.
   The **Run Fix Script** popup appears.
5. Click **Proceed in Background**.
   Always use this option for long-running scripts, or if you do not know the expected execution time.
6. Check the status of the fix script and review the results from the Show Progress Workers related list.

What to do next

Verify the following information.

- A new forum is created for every knowledge base that has Social Q&A content.
- All questions, answers, comments, helpful votes, and upvotes are migrated.
- All view counts, answer counts, and comment counts are migrated.
- The accepted solution to a question in Social Q&A is **Marked as Correct Answer** in Communities.
- Social Q&A is deactivated for every knowledge base that contained Social Q&A data. Social Q&A content is no longer visible for these knowledge bases.

View community logs

Community logs display information about who has viewed or searched for content in a community. The list view displays all log entries, unless filtered.

Before you begin

Role required: sn_communities.admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Search Logs** or **View Logs**.
2. View the logs.

Community logs

Log	Description
Search Log	View who has searched for what and where in the community.
View Log	View who has viewed what and where in the community.

View community feedback and bookmarks tables

View feedback and bookmarks tables to view which community content was given feedback or was bookmarked.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_communities.admin, sn_communities.community_moderator, sn_communities.moderation_admin, sn_communities.forum_admin, or sn_communities.forum_moderator

Note:
Communities users (sn_communities.community_user) have read access to the bookmarks table and the feedback table. Users can only view another user's bookmark and feedback records for content they themselves can access. Bookmark and feedback record visibility is constrained by the viewer's access to the underlying content.

Procedure

1. Navigate to **All** > **Community** > **Feedback**.
2. Choose one of the following options.
   - Click **Feedback** to view the content feedback was given for, the type of the feedback, and who provided it.
   - Click **Bookmarks** to view the content that was bookmarked and who added it.

Create a case from a discussion

In order to engage your internal experts to reply to discussion threads, you can create cases directly from community questions.

Creating cases from community questions requires activation of the Customer Service Management (com.sn_customerservice) plugin.

This feature is available for questions that have been posted by community users who are also contacts or consumers in the Customer Service Management application. Questions can be either answered or unanswered.

Note:
Cases can be created only from questions.

Two sets of users can create cases from questions:

- Customer service agents, consumer service agents, and customer service managers.
- Users with the sn_customerservice.proxy_case_creator role. Community administrators and community moderators inherit this role.

Administer create case from discussion

Configure parameters for the case generated from the community discussion so that it can be routed accordingly.

Creating a case from a discussion requires a configuration that maps information from the question in the community to fields on the Case form. The **Create Case** configuration is included with the feature. This configuration defines the source and destination tables and maps source fields to destination fields. This configuration is stored in the CSM Table Map table [csm_table_map]. The system administrator can modify this configuration as needed.

The **Create Case** configuration uses the Social Q&A Question table [kb_social_qa_question] as the source table and the Case table [sn_customerservice_case] as the destination table. It includes the following mapping information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Mapping information configuration form

Question information	Case information
Question	Short description
Question author	Contact or consumer
Question author's account	Account
Opened by	Logged in community user
Priority	Low (priority = 4)
Channel	Community

To create additional mapping between these tables, add the additional fields to the **Create Case** configuration in the CSM Table Map table. Include these fields as needed on the **Create case from question** record producer.

Enable knowledge harvesting

Configure knowledge harvesting from a community to convert unstructured conversations to structured knowledge articles and make the information more accessible.

Community administrators perform the following tasks to configure knowledge harvesting.

- Enable the Knowledge Management Service Portal plugin (com.snc.knowledge_serviceportal).
- Add a knowledge base to a forum to store the knowledge article in a specific knowledge base.

> **Note:**
> You can only add one knowledge base to a forum. The same knowledge base can be used for multiple forums.

- Add a knowledge category to a forum topic to categorize the harvested content.

Activate Communities plugins

Activate the Customer Communities plugin to use the Communities application.

Before you begin

Role required: sn_communities.admin

About this task

Communities is available for customers who are:

- Licensed for the Customer Service Management application.
- Licensed for HR Service Delivery.

To activate Communities, activate the Customer Communities plugin (com.sn_customer_communities). This plugin is not active by default.

When you activate the Customer Communities plugin, the following plugins automatically activate:

- External User Registration plugin (com.sn_external_user_register)
- Communities plugin (com.sn_communities)
- Gamification plugin (com.snc.gamification)
- Subscriptions and Activity Feed Framework plugin (com.snc.activity_subscriptions)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To activate Communities demo data, activate the Communities Demo Data plugin (com.sn_communities_demo).

To activate the Communities dashboard, activate the Performance Analytics — Content Pack — Communities plugin (com.snc.pa.communities).

Procedure

1. Navigate to **All** > **System Definition** > **Plugins**.
2. Search for the plugin com.sn_communities.
3. Click **Install**.
4. Click **Activate** on the Activate Plugin pop-up window.

Community setup guide for admins

Define your requirements with community and forum stakeholders and set up your forums for community users to start creating content.

Requirements

The roles required to define requirements and set up forums include sn_communities.admin or sn_communities.forum_admin.

Before you begin

Meet with the stakeholders

Stakeholder and responsibility

Stakeholder	Responsibilities
Forum administrators	Define and oversee the forum processes for day-to-day operations related to topic creation, user management, and moderation.
Community administrators	Configure advanced settings for Communities features.
Community users	Contribute content in the form of questions, answers, blogs, and comments.

With stakeholders, determine your community requirements

- Who are the consumers of the community content?
- Which content types can users contribute?
- Who can contribute content and who should have read-only access?
- What should the names of the initial forums be?
- Within these forums, what should the names of the initial topics be?
- Which keywords should be banned?
- How should the system moderate content and users?
- What should the default notifications that users receive for various community activities be?

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do

Use the following steps as guidance to setting up your community.

1. **Create a forum user**: Create a forum user to use to define memberships to a forum.
2. **Create a permission**: Create a permission to use to define a user's access to a forum and its content types.
3. **Add access and content types to your permission**: Add access types to a permission to determine the access that users have to certain forums and content.
4. **Create a forum**: Create a forum to provide a place for users to share content and configure the forum to allow registered users to request access to join.
5. **Configure content types for a forum**: Configure content types for a forum to define which types of content to use in a particular forum.
6. **Create a forum permission**: Create a forum permission by adding a forum user and a permission to a forum.

If required, perform the following actions:

Invite users to join the forum

Invite users to become members of a forum to encourage greater community involvement.

Create permission exceptions

Create a permission exception for users who require specific permissions for a forum.

Copy permissions

- Copy permissions from a forum to copy all permissions and content types from one forum to another.
- Copy permissions from a parent forum.

Debug user permissions

Debug user permissions to investigate and diagnose problems with user access to forums.

Next steps

Create a topic for users to create and share content.

Add a topic to a forum so that users can associate content to that topic.

Moderate a community to set up how the system moderates content and users.

Using guided setup to implement Communities

Communities guided setup provides a sequence of tasks that help you configure Communities on your ServiceNow instance. To open Communities guided setup, navigate to **Community** > **Administration** > **Guided Setup**.

For more information about using the guided setup interface, see Using guided setup.

Configure community content types

Configure content types, such as videos and blogs, for the community.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.admin

About this task
You can configure content types at both the community and forum level. At the community level, content types are active by default. Based on your requirements, you can deactivate content types.

Procedure
1. To configure content types at the community level, navigate to **Community** > **Administration** > **Content Types**.
2. Click a content type.
3. To deactivate a content type, clear the Active check box.
4. Click **Update**.
   The content type is no longer visible to the community.
5. To configure content types at the forum level, navigate to **Community** > **Administration** > **Forums**.
6. Click a forum.
7. Click the **Content Types** related list.
8. In the Active column, double-click a row.
9. To activate a content type, select **True**.
10. To deactivate a content type, select **False**.

Related topics
Community content types

Configure video sources for a community

Configure additional sources that can be used for uploading a video to the community.

Before you begin
Role required: sn_communities.admin

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Video Configuration**.
2. Click **New**.
3. On the form, fill in the fields.
   For field description, see Video Configurations form fields.
4. Click **Submit**.

Configure community forums

A forum is a place for users to share content, exchange notes, ask and answer questions, and so on. Before community users can contribute content, configure a forum with content types and permissions, and create and add topics to one or more forums.

Before you begin
Role required: sn_communities.admin or sn_communities.forum

_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

A forum is the container for user-created content. A forum must be configured with content types and permissions before becoming available for users to contribute content. Forums can be organized hierarchically using the **Parent** field. Once forums are set up, they are visible on the Community homepage based on user permissions.

A topic is an area of interest that users can discuss. Topics are visible from the Community homepage and also appear within forums. They can be organized hierarchically using the **Parent** field.

- The community admin creates topics and can associate a topic with one or many forums.
- Forum admins can associate topics with their own forums.
- If a user has access to a particular forum, they also have access to all its topics.

Procedure

Configure one or more of the following for community forums and topics.

Create a forum

Create a forum to provide a place for users to share content. You can configure forums for membership that registered community users request access to join. You can also configure forums to convert unstructured conversations to structured knowledge articles.

Before you begin

Role required: sn_communities.admin

About this task

A forum can be configured in the following ways.

Options included in the forum configuration

Public	Visible to all users, including non-logged in users. All users have **content_read** access to questions and answers in public forums. Configure public forms by adding a forum user of the type public.
Private	Visible only to users who have been assigned the required permissions in the forum. Configure private forums by adding a forum user of the type custom and adding specific users or user groups to that forum user.
Membership	The forum title is visible to registered community users. Community users must request membership to get full access to the content in the forum. Configure membership forums by selecting the **Enable Membership for this Forum** check box.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. In the Forums list, click **New**.
3. Fill in the fields on the **Forum New record** form.
   For field description, see Forum form fields.
4. To allow registered forum users to view and request to join a forum, select the **Enable Membership for this Forum** check box and complete the following steps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Right-click the form header and click **Save**.
Two default permissions are added to the forum in the **Forum Permissions** related list.

- **Default Permission for Memberships**: Read and write access to questions and answers for users who are forum members.
- **Forum Visible**: Read access to the name and description of the forum for registered users. To access content, users must request forum membership.

b. If required, you can add a new forum permission and set it as the default using the sn_communities.default_permission_for_forum_memberships property.

Example
If you want public users to view content in the forum to attract them to become members, create a forum permission as follows:

- **Forum User**: **Public**.
- **Permission**: **Question & Answer Read**.

c. In the **Approval Flow for Membership** field, perform one of the following options.

Option	Description
Leave the Approval Flow for Membership field blank.	Membership requests to the forum are auto matically approved.
Select the preconfigured approval flow Fo rum Membership Approval.	A task is created and sent to the community or forum administrator for approval.
Select a flow that you have created.	A task is created and sent to the users de fined in your flow for approval.

5. Click **Update**.

Related topics

Add a topic to a forum

Configure community content types

Create a forum permission

Configure content types for a forum

Define which types of content to use in a particular forum and associate a workflow so that content is reviewed before becoming visible to other community users.

Before you begin
Role required: sn_communities.forum_admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click a forum.
3. In the **Content Types** related list, click **New**.
4. In the Content Types list, select a **Content Type**.
5. Select an **Approval Flow**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you signed up before the Zurich release you will see two fields, **Approval Flow** and **Approval Workflow**. You are recommended to set only one of them. The **Approval Flow** field setting takes precedence if both are set.

6. Click **Submit**.

Result

The selected content type is added to the **Content Types** related list in the forum. The following secondary content types are automatically added when creating a primary content type.

Content types included in a forum

Primary content type	Secondary content type
Question	Answer
Blog, Document, Event, Video	Comment

Invite users to become members of a forum

Invite users to become members of a particular forum to encourage greater community involvement.

Before you begin

Role required: sn_communities.admin or sn_communities.forum_admin

Procedure

1. Navigate to **All** > **Community** > **Forums**.
2. Choose a forum from the list that has been configured for membership.
3. Select the **Invite Users to Join this Forum** related link.
4. Complete the following steps to invite internal and external users.

   a. If the users to send the email invitation to are internal, click **Edit Users**.

   b. If external user registration is enabled, the **Enter email address** field is shown.

      Enter the email addresses of the external users to send the email invitation to.

   You can enter both internal and external users to your email invitation.
5. Enter **Comments** to personalize the text in the email invitation.
6. Click **Submit**.
   An email is generated and sent to the users in the list. The approval workflow set in the forum determines the approval of membership from an email invitation. You can view all email invitations in the forum on the **Forum Email Invites** related list.

Approve forum memberships

Manage forum membership approvals when registered community users request membership to a forum.

Before you begin

Role required: sn_communities.admin or sn_communities.forum_admin

About this task

There are two ways of approving forum memberships.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Perform one of the following actions.
   - Navigate to **Community** > **Forums**.
     a. Choose a forum from the list that has been configured for membership.
     b. Click the **Membership Approvals** related list.
   - Navigate to **Self-Service** > **My Approvals.**
2. Accept or reject the membership requests.
   Only one approval is required for each task.
   Once the task has been approved or rejected, an email notification is sent to the user.

Create a topic

Create a topic for users to create and share content.

Before you begin
Role required: sn_communities.admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Topics**.
2. Click **New**.
3. On the form, fill in the fields.
   For field description, see Topic form fields.
4. Click **Submit**.
   The topic is created and added to the list of topics.

What to do next
Add a topic to a forum. For details, see Add a topic to a forum.

Add a topic to a forum

Add a topic to a forum so that users can associate content to that topic.

Before you begin
Role required: sn_communities.forum_admin

About this task
A topic can belong to more than one forum.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. In the list, click the forum name.
3. Click the **Forum Topics** related list.
4. Click **New**.
5. From the **Topic** list, select a topic.
6. Click **Submit**.
   The selected topic is added to the Forum Topics list in the forum. The topic is available to users in this forum.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Disable topics in a community

Disable the topics feature so that no topic information is visible in your community.

Before you begin
Role required: sn_communities.admin

About this task
The administrator can change the *sn_communities.enable_topics* property so that all topic information is hidden in the community. The data is not deleted.

Procedure

1. Enter `sys_properties.list` in the filter navigator and search for the *sn_communities.enable_topics* property.
2. In the **Value** field, enter `false`.
3. Click **Update**.
   - No topic information is displayed in the **Activity Feed** or **Notifications and Subscriptions**.
   - No topic information is displayed on the **Forums** or **Topics** landing pages.
   - No topic information is displayed on Gamification pages and widgets.
   - Topic fields do not appear when creating, editing, or viewing content.
   - Topics do not appear in the search results page.

Create a sub forum

Create a sub forum and map it to a parent forum to establish a forum hierarchy.

Before you begin
Role required: sn_communities.forum_admin

About this task
There are two ways of creating a sub forum in Communities.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
   - On the Forums list page, click **New**.
   - Locate the forum to create a sub forum in, click its name, and then click the **Sub Forums** related list.
2. Fill in the fields on the **Forum New record** form.
   For field description, see Forum form fields.

Result
The forum hierarchy of forums and sub forums is displayed on the community home page, forum landing page, when creating questions, blogs, or events, and in the search filters.

Move forum content

Move community content posts from one forum to another.

Before you begin
Role required: sn_communities.admin, sn_communities.community_moderator, sn_communities.forum_admin, sn_communities.forum_moderator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Access to content is based on permissions to a specific forum. If content is moved, the author of the content and other community users might lose access to it, depending on their forum permissions.

Note:
Draft content cannot be moved. If the content type is not supported in the new forum, it cannot be moved.

Procedure

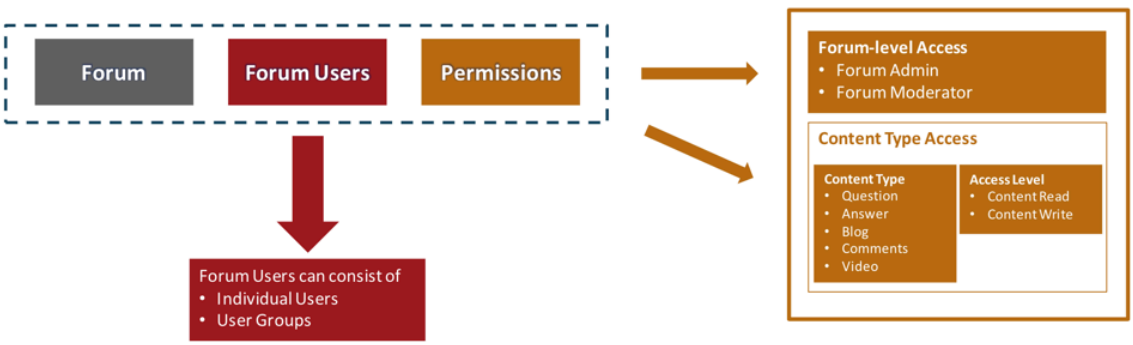
1. Navigate to the community homepage.
2. Click the content you want to move.
3. Click **...** and **Edit**.
4. Select the forum you want to move the content to.
5. Click **Save**.
   An email notification is sent to the author of the content, subscribers to the content, and subscribers to the forum.

Forum and user permissions management

Community and forum administrators can give users and groups of users different levels of access to forums and forum content.

Note:
By default, community content is not publicly accessible. A community administrator must enable public access by configuring the appropriate permissions.

There are three components that make up the security settings for forums: forum users, permissions, and forums.



Forum users

A forum user is a logical group of users, user groups, or both. This group is used to define memberships to a forum.

Permissions

A permission is a combination of:

- access types for a forum
- access types for a given content type

Forums

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A forum is the container for user-created content. A forum must be configured with content types and permissions before becoming available for users to contribute content.

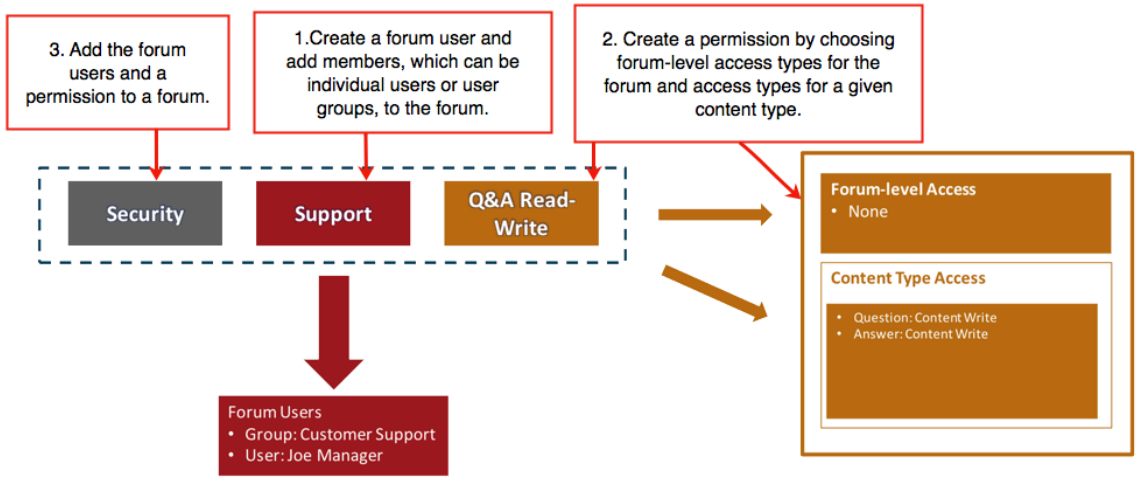
You can create your own permission or use one of the default permissions that the Communities application delivers.

Default permissions

Permission	Description
Blog Read	Read access to blogs.
Blog Read and Comment Write	Read access to blogs and write access to comments.
Blog Write	Write access to blogs.
Blog Write and Comment Write	Write access to blogs and comments.
Default Permission for Memberships	Default permissions for forums that are marked as **Enable Membership for this Forum**.
Default permissions for public user	Public access to forums.
Default permissions for registered user	Permissions for registered and logged in users.
Document Read and Comment Write	Read access to documents and write access to comments.
Document Write and Comment Write	Write access to documents and comments.
Event Read and Comment Write	Read access to events and write access to comments.
Event Write and Comment Write	Write access to events and comments.
Forum Admin	Full access to a forum.
Forum Moderator	Moderation access to a forum.
Forum Name and Description Read	Read access to the name and description of a forum. To access content or topics, other permissions are required.
Full Access	Write and read access to all content types.
Question and Answer Read	Read access to questions and answers.
Question and Answer Write	Write access to questions and answers.
Question Write	Write access to questions.
Video Read and Comment Write	Read access to videos and write access to comments.
Video Write and Comment Write	Write access to videos and comments.

To assign permissions to users and user groups, create associations between forum users and permissions for a specific forum.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
Forum permissions are not inherited in the forum hierarchy. Each subforum must be configured with its own set of permissions and content types.

- You can use forum users and permissions in multiple forums.
- You can add multiple forum users and permissions to one forum.
- You can copy permissions from a parent forum to a child forum or from another forum altogether.
- You can also define user-specific permission exceptions and debug user permissions.

Create a forum user

You can create forum users, which you then use to define memberships to a forum.

Before you begin

Role required: sn_communities.forum_admin

About this task

A forum user is a set of users and user groups. Forum users are reusable. Multiple forum users can be used in any given forum.

Note:
Before creating a forum user, check whether an existing forum user matches your requirements.

Types of forum user

Public	Public users can view the community without logging in. By default, public users have **content_read** access to questions and answers in public forums.
Registered	Users who have signed up to the community and accepted the Terms & Conditions. Once logged in, their access to forum content depends on the permissions set up for each specific forum.
Custom	Specific users and user groups that are added as members to the current forum user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Types of forum user (continued)

Membership	A group of members who have joined a specific forum. Once logged in, their access to forums depends on the permissions set up for each specific forum.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forum Users**.
2. Click **New**.
3. On the form, fill in the fields.

Forum User form

Field	Description
Name	Name of the user.
Description	Description of the user.
User type	Type of user.

4. Click **Submit**.
   The forum user is created and added to the Forum Users list.

Add members to a forum user

Add members to a forum user. Members can be individual users or user groups.

Before you begin

Role required: sn_communities.forum_admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forum Users**.
2. Click the forum user to add members to.
3. In the Members related list, click **New**.
4. On the form, fill in the fields.

Members form

Field	Description
Forum User	Forum user name. The name is automatically filled.
Membership Type	Membership type. Choose either **User** or **Group**.
Member	User or user group to add to the forum user. If you selected **Membership Type** > **User**, the **Table name** is automatically filled with *sys_user*.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	If you selected **Membership Type** > **Group**, the **Table name** is automatically filled with *sys_user_group*. Enter your user or user group in the**Document** field.

5. Click **Submit**.

Create a permission

Create a permission to use to define a user's access to a forum and the content in the forum.

Before you begin
Role required: sn_communities.admin

About this task
Permissions are reusable. Before creating a permission, check if any existing permissions match your requirements.

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Permissions**.
2. Click **New**.
3. On the form, fill in the fields.

Permission form

Field	Description
Name	Name for the permission.
Description	Description of the permission.

4. Click **Submit**.

Add access types to a permission

Access types for a permission determine the access that users have to certain forums.

Before you begin
Role required: sn_communities.forum_admin

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Permissions**.
2. In the **Permissions** list, click the permission you created.
3. Click the **Forum Access** related list.
4. Click **New**.
5. Select an access type.
6. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Create a forum permission.

Related topics
- Community content types
- Community access types

Add content types to a permission

Content types for a permission determine the access that users have to certain content in a forum.

Before you begin
Role required: sn_communities.forum_admin

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Permissions**.
2. In the **Permissions** list, click the permission you created.
3. Click the **Content Type Access** related list.
4. Click **New**.
5. Select a content type and an access type.
6. Click **Submit**.

Create a permission exception

Create a permission exception for users who require specific permissions for a forum.

Before you begin
Role required: sn_communities.forum_admin

About this task
Permission exception records are created for users who require specific permissions for a particular forum, for example, a forum manager. Any other permissions that the user has are no longer valid once an exception is created.

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click a forum.
3. Click the **Permission Exceptions** related list.
   The list of users who have extra permissions for this forum is displayed.
4. Click **New**.
5. In the **User** field, enter the name of the user to create a permission exception for.
6. In the **Permission** field, enter a permission.
7. Click **Submit**.
   A permission exception is created and added to the list of **Permission Exceptions** on the forum.

Clone a permission

Clone a permission if an existing permission record cannot be modified and you require a permission record with similar settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.forum_admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Permissions**.
2. Click the permission you want to clone.
3. Click the **Clone** related link.
   A new permission with the same access types as the source permission is created. The permission record name starts with **Clone of**.

Create a forum permission

Add a forum user and a permission to a forum to create a forum permission.

Before you begin
Role required: sn_communities.forum_admin

About this task
Forum permissions are a combination of a forum, forum users, and permissions. Associate forum users and permissions within a specific forum. You can add multiple combinations of forum users and permissions to a forum.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click a forum.
3. In the **Forum Permissions** related list, click **New**.
4. On the form, fill in the fields.

Forum Permissions

Field	Description
Forum	Name of the forum.
Forum Users	User or group of users to give access to the forum.
Permission	Permission to give to the forum users in the forum.

5. Click **Submit**.

Copy permissions from a parent forum

You can copy permissions from a parent forum to a child forum.

Before you begin
Role required: sn_communities.forum_admin

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click a forum.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click the **Copy Permissions from Parent Forum** related link.
   All permissions and content types are copied from the parent to the child forum. A summary of the results is displayed at the top of the form.

What to do next
Configure the forum users and permissions as required.

Copy permissions from a forum

You can copy all permissions and content types from one forum to another.

Before you begin
Role required: sn_communities.forum_admin

About this task
You can copy permissions from one source forum to multiple target forums.

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click the name of the forum that you want to copy permissions from.
3. Click the **Copy Permissions to Forum(s)** related link.
4. On the form, fill in the fields.

Copy Permissions

Field	Description
Copy Permissions From	Name of the forum you want to copy permissions from. The name is automatically filled.
Copy Permissions To	Name of the forum you want to copy the permissions to. You can enter more than one forum.

5. Click **Save**.

Debug user permissions

Investigate and diagnose problems with user access to forums.

Before you begin
Role required: sn_communities.forum_admin

Procedure
1. Navigate to **All** > **Community** > **Administration** > **Forums**.
2. Click the name of the forum to investigate.
3. Click the **Debug Forum Permissions** related link.
4. Enter the name of the user you want to check the permissions for.
   The forum user permissions information indicates which content and access types the user has for a particular forum.

Configure the community profile

Set up the community profile by configuring profile fields and deciding which fields to display in the personal information section of the community profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.admin

Procedure

Configure one or more of the following for the community profile.

Create a persona for the community profile

Create a persona and associate it to a role to manage which data users can modify.

Before you begin
Role required: sn_communities.admin

About this task
A persona is associated to a user role and can be mapped to specific fields for display on the community profile. The base system contains a default persona, which is not associated to a role and is used for all community users. You can create a new persona or add a role to the default persona.

Procedure

1. Navigate to **All** > **Community** > **User Profile** > **Persona**.
2. Click **New** and then complete the Persona form.

Persona configuration form

Field	Description
Name	A name for the persona.
Order	The order, in numerical value, in which the system should evaluate the roles for the persona.
Associated Role	The role to associate the persona to.

3. Click **Submit**.

Create a community profile field

Create a field to display on the community profile.

Before you begin
Role required: sn_communities.admin

Procedure

1. Navigate to **All** > **Community** > **User Profile** > **Profile Fields**.
2. Click **New**and then complete the Profile Fields form.

Profile field configuration form

Field Label	A label for the field.
Field Name	A name for the field.

3. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure persona field mapping for the community profile

Configure which fields appear in the community profile and manage the settings associated with those fields.

Before you begin

Role required: sn_communities.admin

Procedure

1. Navigate to **All** > **Community** > **User Profile** > **Persona Field Mapping**.
2. Click **New**and then complete the Persona Field Mapping form.

Persona Field Mapping form

Field	Description
Persona	Name of the persona.
Source Value Table	Source table of the field to be added to the persona. Any table that is used as the **Source Value Table** should have a reference to the sys_user table.
Source User Field	Field from the source value table.
Privacy Read Only	Select the check box to allow the community user to change the display settings for this field in their community profile.
Profile Field	Display name of the community profile field.
Source Value Field	Name of the field from the source table.
Read Only	Select the check box to not allow the community user to edit the value of this field.
Privacy Default	Privacy default setting for the field. It shows the field for the selected group of users. The available options are: ○ Everyone ○ Everyone after logging in ○ Only me ○ Followers

3. Click **Submit**.

Create community Terms and Conditions

Community members must follow the community rules of conduct. Create community Terms and Conditions and them share to build a successful community. Every community user must review and accept the Terms and Conditions before contributing to a community.

Before you begin

Role required: sn_communities.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The Communities application includes preconfigured Terms and Conditions that you can modify according to your needs.

You can disable Terms and Conditions using the *sn_communities.disable_terms_conditions_role* property. The community profile isn't created.

Procedure

1. Navigate to **All** > **Community** > **Administration** > **Communities Terms and Conditions**, click **New**, and then fill in the fields.

Terms and Conditions form

Field	Description
Number	An automatically generated number for your Terms and Conditions. If required, you can change the number.
Short Description	A short description for your Terms and Conditions.
Content	The content of your Terms and Conditions.

2. Complete one of the following actions to save the Terms and Conditions.
You can view which community users have accepted the Terms and Conditions and when. Navigate to **Community** > **User Profile** > **Community Profiles**. View or add, if necessary, the **Accepted TC**, **Accepted TC Date**, and **Accepted TC Number** fields.

Enable users to self-register to a community

Once users have accessed public forums and decided they want to join the community, they can self-register to the community. External user registration provides a way of validating users and requires them to accept the community Terms and Conditions.

Community administrators perform the following tasks to configure external user registration.

- Configure the external user registration properties.
- Configure moderation filters to enter banned words for the user name.
- Configure the required strength for passwords.
- Create an email template and content. The email template that you can change is **communities.ext.regn.confirm**.
- If not already configured, create community terms and conditions that each community user must review and accept. Communities delivers preconfigured Terms and Conditions that you can modify according to your needs.
- To enable external users to update their time zone when registering, add ACLs to external users in the User table [sys_user].

Moderate a community

Community moderators can manage content quality by reducing the inappropriate content that is posted on the community.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_communities.community_moderator, sn_communities.forum_moderator, or sn_communities.moderation_admin

Procedure

1. Define your requirements for Community moderation.
   - Should first-time posters receive automatic moderation?
   - Which words should be banned from user content?
   - Should the system prevent content containing banned words from being posted?
   - Should users be able to report inappropriate content?
   - How many offenses can a user commit before the system bans them automatically?
2. Navigate to **Community** and choose the **Moderation** or **Moderation Tasks** menu and the module you require.
3. Configure one or more of the following aspects for your community.

Configure general moderation settings

Configure when to moderate content for users and user groups.

Before you begin

Role required: sn_communities.admin, or sn_communities.moderation_admin

Procedure

1. Navigate to **All** > **Community** > **Moderation** > **Moderation Settings**.
2. On the form, fill in the fields.

Moderation Settings form

Field	Description
Users Never Moderated	Content is never moderated for these users.
Users Always Moderated	Content is always moderated for these users.
User Groups Never Moderated	Content is never moderated for these user groups.
User Groups Always Moderated	Content is always moderated for these user groups.
Hide content if user violates settings	Check box to hide content written by a user until a moderator approves it.

3. Click **Update**.

Configure moderation settings for a new user

Configure the system to prevent inappropriate user contributions.

Before you begin

Role required: sn_communities.admin or sn_communities.moderation_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Community** > **Moderation** > **Moderation Settings**.
2. Click the **New User** related list.
3. On the form, fill in the fields.

Moderation Settings form

Field	Description
New User Content Threshold	Number of user posts to be moderated.
User Exception List	New users that are not included in the new user content threshold for moderation.
User Group Exception List	User groups that are not included in the new user content threshold for moderation.

4. Click **Update**.

Assign a moderation task to your assignment group

Change the assignment group to assign a moderation task to your assignment group.

Before you begin
Role required: assignment_rule_admin

About this task
A moderation task is generated when a community user reports inappropriate content or community profiles. By default, the system assigns the task to the community moderator group. You can also configure your system to always require content moderation for a particular user or group.

Procedure

1. Navigate to **All** > **Routing and Assignment** > **Assignment Rules**.
2. On the Assignment Rules page, search and select `sn_communities_moderation_task` in the **Table** column.
3. On the Moderation Task Assignment Group page, enter the User and Group details in the **Assign To** tab.
4. Select **Update**.

Configure abuse reporting

Configure whether users can report content and profile abuse, set an abuse reporting threshold, and define reasons for abuse reporting.

Before you begin
Role required: sn_communities.admin or sn_communities.moderation_admin

Procedure

1. Navigate to **All** > **Community** > **Moderation** > **Moderation Settings**.
2. Click the **Abuse** related list.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Moderation Settings form

Field	Description
Enable Content Abuse Reporting	Check box to enable users to report inappropriate content.
Enable Profile Abuse Reporting	Check box to enable users to report inappropriate profiles.
Abuse Reporting Threshold	Number of abuse reports on a specific content (question, blog, video, answer, comment) that lead to the content being hidden from other users.
Content Abuse Reporting Reasons List	Phrases that are possible reasons for the user to report inappropriate content contributions. Separate each phrase using the pipe symbol|. For example, This content is abusive|This content used an offensive word|Spam|Inappropriate media.
Profile Abuse Reporting Reasons List	Phrases that are possible reasons for the user to report an inappropriate user profile. Separate each phrase using the pipe symbol|.

4. Click **Update**.

Configure user banning

Set the number of offenses a user can make before they are banned from creating or editing content.

Before you begin

Role required: sn_communities.admin or sn_communities.moderation_admin

Procedure

1. Navigate to **All** > **Community** > **Moderation** > **Moderation Settings**.
2. Click the **User Banning** related list.
3. On the form, fill in the fields.

Moderation Settings form

Field	Description
Enable Banning Users	Check box to enable the banning of users.
Offense Threshold	Number of offenses a user can make before being automatically banned.

4. Click **Update**.

Configure moderation filters

Create moderation filters to manage how content is moderated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.admin or sn_communities.moderation_admin

Procedure
1. Navigate to **All** > **Community** > **Moderation** > **Moderation Filters**.
2. Click **New**.
3. Click **Banned Keyword Filter**.
4. On the form, fill in the fields.

Moderation Banned Keyword Filter form

Field	Description
Filter Name	Name of the filter.
Active	Check box to make the filter active.
Synchronous	Check box to automatically moderate content when it is submitted. Any content that includes the banned words defined in the filter is not posted. If the check box is cleared, the system creates a moderation task when banned words are used. The content is visible until it is moderated.

5. Click **Submit**.
6. From the Moderation Filters list, click the name of your filter.
7. Add a banned keyword word to the list:
   a. In the **Keywords**list, click **New**.
   b. In the Keyword field, enter your keyword.
   c. Click **Submit**.
   d. If required, repeat to add more keywords to the list.
8. Click **Update**.

Ban a user

You can ban a user from creating or editing content, for example, a user can be banned for posting inappropriate content.

Before you begin
Role required: sn_communities.admin, sn_communities.moderation_admin, or sn_communities.community_moderator

Procedure
1. Navigate to **All** > **Community** > **User Profile** > **Community Profiles**.
2. On the Community Profile, search the user in the **Live Profile** column.
3. Hover on the user and select the Preview icon ().
4. On the Community Profile window, select **Open Record**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. On the Community Profile page, select **Ban User**.
   The user is banned. In the Community Profiles list, the value in the **Banned** column is set to **true**.

Revoke a user ban

Revoke a user ban to allow a user to create and edit content again.

Before you begin

Role required: sn_communities.admin, sn_communities.moderation_admin, or sn_communities.community_moderator

Procedure

1. Perform either of the following actions.
   - Navigate to **Community** > **User Profile** > **Community Profiles**.
   - Navigate to **Community** > **Moderation** > **Users Banned by Moderation**.
2. Click the Preview icon next to the user and then select **Revoke User Ban**.
   The user ban is revoked. In the Community Profiles list, the value in the **Banned** column is set to **false**.

Approve or reject content

Approve or reject content that a user reported as inappropriate or that is associated with a particular community profile.

Before you begin

Role required: sn_communities.community_moderator, sn_communities.moderation_admin

About this task

A moderation task is generated when a community user reports inappropriate content or community profiles. By default, the system assigns the task to the community moderator group. You can also configure your system to always require content moderation for a particular user or group.

Each task requires the moderator to approve or reject the reported item. If the moderator rejects content, it is counted as an offense against the community user who contributed the content.

Procedure

1. Navigate to **All** > **Community** > **Moderation Tasks** > **Assigned to me**.
2. Click a moderation task.
3. On the form, fill in the fields.

Moderation Task form

Field	Description
Assigned to	Person assigned to the task.
Moderation Notes	Notes entered by the user when reporting the content.
Resolution Notes	Your comment as you moderate the content.
Work Notes	Work notes entered by users working on the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Approve Content	Approve content that conforms to community rules. The content state changes to Closed Complete.
Reject Content	Reject content or a profile. The content state changes to Closed Complete and the content is hidden in the community.

Note:
You can review the outcome of existing and past moderation tasks by navigating to **Community** > **Moderation** > **Moderation Outcomes**. Click a task to view the details of the moderation task.

Disable comments

Disable comments on a blog, document, video, event, or question to avoid users from posting comments.

Before you begin

Role required: sn_communities.forum_moderator, sn_communities.community_moderator, sn_communities.moderation_admin, or sn_communities.forum_admin

About this task

There are two ways of disabling comments on the community content. You can disable comments while posting new content or restrict users from posting comments on existing content.

Note:
You can disable replies on an existing question to restrict users from posting further comments. You can't post a new question when replies are disabled.

Procedure

Navigate to the community home page.

- To disable comments on new community content:
  a. Choose the content type that you want to post.
  b. Fill the details.

  Note:
  Disable Comments check box is visible only after filling details on the form.

  c. Select the **Disable Comments** check box.
  d. Select **Publish**.
- To disable comments on existing community content:
  a. Choose the content that you want to disable the comments for.
  b. Select the more options icon (⋯) and then select**Edit**.
  c. Select the **Disable Comments** check box.
  d. Select **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A confirmation message appears stating that you have disabled comments. The comments on the existing content are displayed. You can't edit an existing comment or post a new comment. All community and forum administrators and the content author receive an email notification when you disable or enable comments.

Related topics

Post and respond to content in the community

Remove content

Remove content that does not meet community standards.

Before you begin

Role required: sn_communities.admin

Procedure

1. Navigate to **All** > **Community** > **Content** > **Contents**.
2. Click the content to remove.
3. Click **Actions on selected rows** > **Delete** and confirm that you want to delete the item.

Harvest knowledge from a community

Harvest knowledge from a community and create structured knowledge articles from unstructured discussions around a question.

Before you begin

Role required: sn_communities.knowledge_harvester, sn_communities.admin, or sn_communities.moderation_admin

Knowledge harvesting must be enabled.

About this task

You can only harvest solved questions with accepted solutions into a knowledge article.

Procedure

1. From the Communities homepage, perform one of the following actions.
   - Go to the Content List.
   - Click a forum.
   - Search for a discussion thread (Question and Answer).
2. Click **Question State** > **Solved** to filter for all discussions that can be converted into knowledge articles.
3. Click a question.
4. Click the **...** icon and then **Harvest Knowledge**.
5. Fill in the fields on the Harvest Knowledge form.

Harvest Knowledge form

Field	Description
Short description	The original question is automatically entered in the **Short description** field. You can edit the short description, as required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Attachments	All attachments associated with the question and accepted solution are automatically added to the knowledge article. You can add and remove attachments.
Text	The body of the original question and accepted solution is automatically entered in the **Text** field. You can edit the text, as required.
Knowledge base	The knowledge base to which the knowledge article has been added. It is added by default based on the knowledge base associated to the forum from which article was harvested. If required, you can change the knowledge base.
Category	The category of the knowledge article. It is entered by default based on the category associated to the topic from which the article was harvested. If required, you can change the category.
Number	A KB (Knowledge Base) number is automatically assigned to the article. You cannot edit the **Number** field.

6. Perform one of the following actions.

Administer gamification

Users with the gamification administrator role can create the rules and other entities that award points to users based on their participation within the community.

Configure gamification properties

Configure gamification properties to meet your company's needs.

Before you begin

Role required: sn_gamification.admin

Procedure

1. Navigate to **All** > **Community** > **Gamification Administration** > **Gamification Properties**.
2. Enter the number of days to store the gamification activity history.
   The default is 180 days. A scheduled job purges the points history that is older than 180 days. This purge does not delete the aggregated data.
3. Enter the maximum number of levels that can be defined.
4. Click **Save**.

   Additional properties can be configured for the gamification feature. For more information, see Gamification properties.

Create a gamification rule

Create gamification rules so that users can earn points for community activities.

Before you begin

Role required: sn_gamification.admin

Procedure

1. Navigate to **All** > **Community** > **Gamification Administration** > **Rules**.
2. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Fill in the fields on the Gamification Rule form as necessary.

Gamification rule configuration form

Field	Description
Rule Name	A descriptive name for the gamification rule.
Gamification Module	The application to which this rule applies. Click the lookup icon to select a module from the Gamification Modules list. The default is **Community**.
Activity Type	The user activity for which this rule applies. Click the lookup icon to select one of the available types from the Activity Types list.
Profile Receiving Points	The type of user profile that earns points for performing the activity defined in this rule. Click the lookup icon to select a profile corresponding to the activity.
Exclude Self-Award	Check box to ensure that the activity performer is not the same as the profile receiving points.
Active	Enable this check box to activate the rule. The default is set to active.
Gamification Track	The gamification track to which this rule belongs. Click the lookup icon to select one of the available tracks from the Gamification Tracks list. By default, two tracks are available: ○ Community Expertise ○ Community Participation
Points	The number of points earned by performing the activity defined in this rule.
Points for Areas of Expertise	The points accrued can be used towards a forum or topic level expertise. Click the lock icon to expand the field and configure if the points should accrue towards a forum and/or topic.

4. Click **Submit**.
   The newly created rule appears on the Gamification Rules list. This rule appears on the How to Earn Points page.

Create a gamification track

Create tracks to provide a logical way to separate points assigned in the communities into different areas.

Before you begin

Role required: sn_gamification.admin

Procedure

1. Navigate to **All** > **Community** > **Gamification Administration** > **Tracks**.
2. Click **New**.
3. Fill in the fields on the Gamification Track form as necessary.

Gamification track configuration form

Field	Description
Track Name	A descriptive name for the gamification track.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Gamification Module	The module to which this track applies. Click the lookup icon to select a module from the Gamification Modules list. By default the module is set to Community.
Active	Enable this check box to activate the track. By default this field is set to active.
Application	The application to which this track applies. By default the module is set to Community.
Track Display Order	The order in which the track appears.

4. Click **Submit**.
   The newly created track appears on the Gamification Tracks list.

> **Note:**
> While tracks can be configured, it is not currently displayed anywhere on the Community portal.

Create a gamification badge

Create gamification badges that users can earn for achievements within the community.

Before you begin
Role required: sn_gamification.admin

About this task
The gamification feature includes several predefined badges.

Procedure
1. Navigate to **All** > **Community** > **Gamification Administration** > **Badges**.
2. Click **New**.
3. Fill in the fields on the Gamification Badge form as necessary.

Gamification badge configuration form

Field	Description
Gamification Module	The application to which the badge applies. The default module is **Community**.
Badge Name	The name of the badge as it appears on the Community portal.
Badge Display Order	The order of the badge indicates the rank. If a community user has multiple badges assigned to them, this field determines the sequence in which the badges are displayed.
Active	Enable this check box to activate the badge.
Description	A brief description of the badge as it appears on the Community portal.
Badge Icon	The image file for the badge. Click to add the icon, choose the desired image file, and then click **OK**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The recommended image size for ideal performance is 50 pixels by 50 pixels and less than 500KB.

4. Click **Submit**.
   The newly created badge appears on the Gamification Badges list.

Manage gamification levels

Manage the predefined levels for global, forum, and topic expertise.

Before you begin
Role required: sn_gamification.admin

About this task
Gamification includes predefined global, forum, and topic levels.

Procedure
1. Navigate to **All** > **Gamification** > **Configuration** > **Levels**.
2. View the existing definitions for global, forum, and topic levels.
3. Change the **Level Name** if required.
4. Click **Submit**.
   Adding new level definitions is not recommended unless there is a strong use case. If you need to add or modify level ranges in existing level definitions, see Manage gamification level ranges.

Manage gamification level ranges

Manage level ranges for a gamification level definition, to recognize the expertise level of your community users.

Before you begin
Role required: sn_gamification.admin

About this task
Gamification includes predefined global, forum, and topic levels. Each level definition can have several level ranges and the system is predefined with 10 ranges for global level and five ranges each for the forum and topic levels. Each range should not overlap and must have a unique start value.

Procedure
1. Navigate to **All** > **Gamification** > **Levels**.
2. Select the desired level (global, forum, or topic).
3. Modify the **Level Range Name**.
4. Modify the **Points Start** field.
   Each range should not overlap and must have a unique start value.
5. Click **Submit**.
   Level ranges are updated on the Community portal.

Community Service Portal

The Community Service Portal is a web interface that is based on the ServiceNow Service Portal application.

The Community Service Portal is designed to allow you to have control over the behavior of your portal and help create an attractive and engaging user experience.

Customize Community Service Portal

Customize community service portal according to your needs.

Before you begin

Role required: admin

Procedure

1. Navigate to **Service Portal** > **Portals**.
2. Select **Community**.

Configure Community Service Portal header menus

Configure Community Service Portal header menus to create a consistent user experience across all your end-user facing service portals using a modern interface and a unified navigation menu structure.

Before you begin

Role required: The admin role for your service portal, for example, sn_communities.admin.

About this task

Add a theme and header menu to your service portal to define its look and behavior.

Procedure

1. Navigate to **All** > **Service Portals** > **Portals** and click the module for the portal you want to modify.
2. In the information message on the Page form indicating that you have to change the current application to edit the record, select **here**.
   You have to be in the **Communities** application to edit.
3. In the **Theme** field, enter `CSM Default`.
4. In the **Main Menu** field, enter `CSM Unified Portal Header Menu`.
5. Click the information icon next to the **Main menu** field and click **Open Record**.
6. Click the Settings icon and **System Settings** > **Developer**.
7. Change the **Application** to **Customer Service Management Unified Theme** and click the Refresh icon.
   You only have to change this setting once.
   The **New** button is displayed next to **Menu Item**.
8. To display the names of the menu items, personalize the Menu Items related list and add **Display name**.
9. Click **New** from the Menu Items related list.
10. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Menu Item form

Field	Description
Label	Name that appears for the item in the menu.
Parent Menu	This field should already contain the name of the menu you are adding items to. You can change the value as required to other menus.
Parent Menu Item	Use this field to nest menu items within other menu items.
Order	Value that determines where the item appears in the menu in relation to other menu items.
Type	The kind of page the item links to. For example, you can link to another page in the portal, or an external URL. Form fields vary depending on the option you select from this list.
Page	Name of the portal page the item links to.
Condition	Determines what conditions are required for menu items to show in the header.
Glyph	Icon that appears beside the menu item

11. Select **Submit**.

Configure announcement for community members

Global announcements appear in the banner and broadcast messages to all community members. Forum announcements appear in the Announcements section on the forum page. You can also send the announcement by email.

Before you begin

Role required:

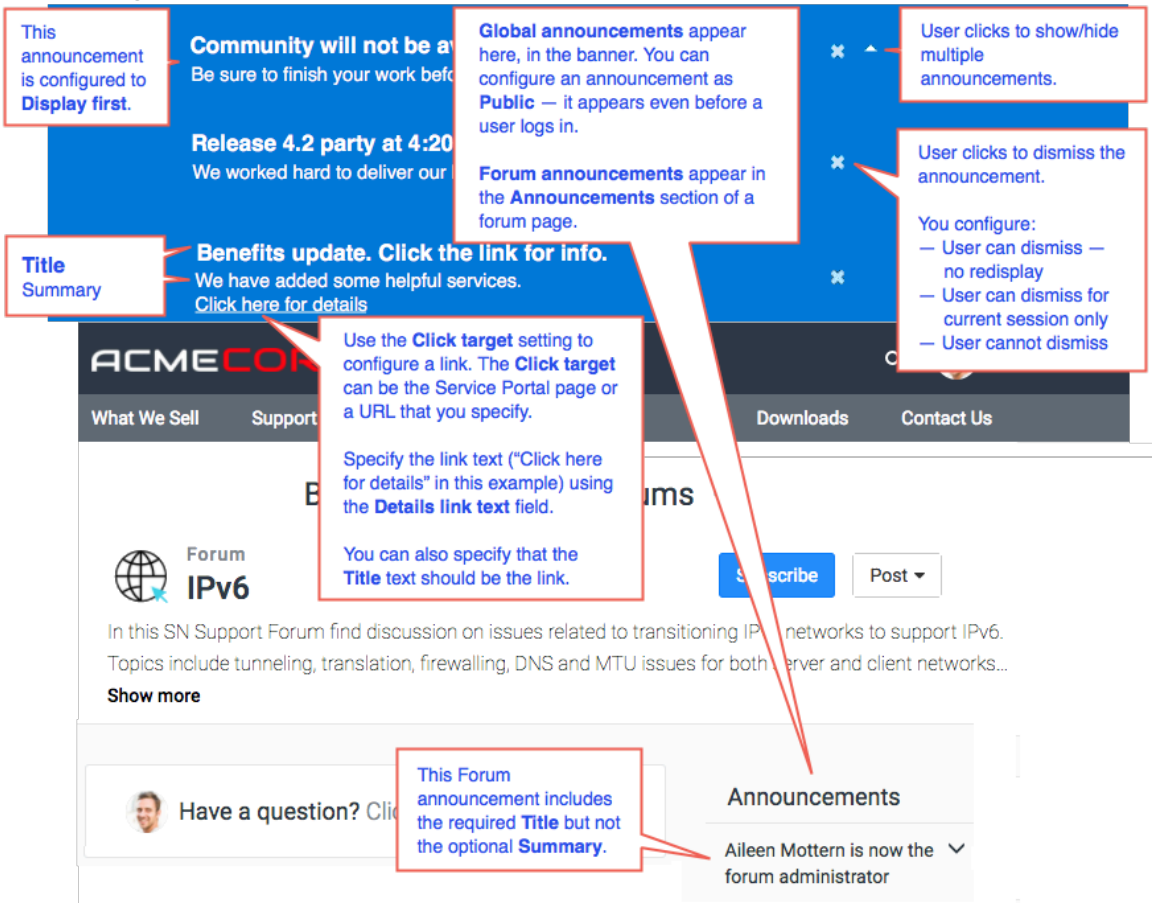
- sn_communities.admin can manage Global announcements and Forum announcements
- sn_communities.forum_admin can manage Forum announcements for own forums only. The announcement appears only in the forum that the admin owns.

About this task

This example shows how a community user experiences announcements and how you can configure the appearance and operation of announcements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community User Experience Announcements



Procedure

Navigate to **All** > **Community** > **Administration** > **Global Announcements** or **Forum Announcements**, click **New**, and then fill in the form.

Announcement configuration form

Announcement type	Read-only. Set to **Global Announcement** or **Forum Announcement**, depending on what you are working on.
Active	Select the check box to publish the announcement to members. Clear the check box to cancel the announcement.
Title	Display title of the announcement. • The text appears above the **Summary** text. • In email, the text is the subject of the message.
Summary	Content of the announcement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	• The text appears below the **Title** text. • In email, the text is the body of the message.
From / To	• **From**: Date and time that the announcement should appear. • **To**: Date and time that the announcement should no longer appear.
Send email notification	Select the check box to send the announcement to members as an email message in addition to broadcasting the announcement.
Display first	Select the check box to display the announcement as the first announcement in the list.
Public	Select the check box to enable forum members that are not logged in to view the announcement.
Portals	Portals that display the announcement. Default: **Community**. **Note:** If no value is specified, the announcement does not appear in any portal.
Click target	The **Click target** setting creates a link for the announcement. • **None**: No link. • **Page**: Opens a Service Portal page in the current browser tab. • **URL in current browser tab**: Opens the specified URL in the current browser tab. • **URL in new browser tab**: Opens the specified URL in a new browser tab.
Details URL	If you select a URL option for **Click target**, then enter the URL in the **Details URL** field.
Details link text	Appears only if **Click target** is not **None**. • To display a link under the **Summary** text, enter the text of the link in the **Details link text** field. • To use the **Title** text of the announcement as the link, leave **Details link text** blank.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forums	This setting appears for Forum announcements only. Slushbucket of forums that you are admin for. Move a forum into the **Selected** list to display the announcement on the forum.
Dismiss options	This setting appears for Global announcements only. Determines how the user can dismiss the announcement.

What to do next

- To update an announcement, update any setting as needed and then click **Update**. If you specified **Send email notification**, then you are prompted to send the updated email message.
- To cancel an announcement, clear the **Active** check box.

Community pages that support SEO data

To improve search results for community members using external search engines, the Communities application generates SEO meta tags and injects the tags into questions, topics, forums, and other page types.

Note:
If the auto-generated SEO tags in a page does not meet your needs, you can change the SEO tags. See Modify SEO in community pages.

Pages that include auto-generated SEO data

The Communities application auto-generates SEO meta tags for the following pages in the Community service portal. The table provides details on the data that is generated.

- community_question
- community_blog
- community_document
- community_video
- community_event
- community_forum
- community_topic

Auto-generated SEO tags

Searchable page type	Auto-generated tags in the page
Question, Blog, Document, Video, and Event	• The *title* meta tag is populated with the text "<forum name> - <content short description>" • The *description* meta tag is populated with the text "<forum name> - <topic names> - <first 100 characters of the body of the content>"

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Auto-generated SEO tags (continued)

Searchable page type	Auto-generated tags in the page
Forum	• The *title* meta tag is populated with the text "<forum name>" • The *description* meta tag is populated with the text "<forum description>"
Topic	• The *title* meta tag is populated with the text "<topic name>" • The *description* meta tag is populated with the text "<topic description>"
Leaderboard page	The Title meta tag is populated with the text "<community name>"

Modify SEO in community pages

If an auto-generated SEO meta tag does not meet your needs, you can modify or replace the tag.

Before you begin

Role required: sn_communities.admin

About this task

The source code for this example question page (ID *community_question*) shows the *description* meta tag (highlighted in yellow) that the Communities application injected into the page.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The *description* meta tag text is made up of three data fields that are taken from the *communitiy_question* record. In the tag, the values are separated by a hyphen character.

- The first portion of the *description* meta tag is the value of the `forum name` field in the question record. In the example, the forum name is `Routing and Switching`.
- The second portion of the tag is the value of the `topic` field in the record — `Tomahawk (5000 Series)` in the example.
- The third portion of the tag is generated from the first 100 characters of the `body` field in the record — `My 5000 series router has been overheating since I upgraded the firware couple of days ago. Anybody`.

In addition to the *description* meta tag for a question page, the Communities application injects a *title* tag (highlighted in blue). The title is generated dynamically using two values from the *communitiy_question* record:

- Forum name (`Routing and Switching` in the example)
- Short description (`Router overheating after firmware upgrade` in the example)

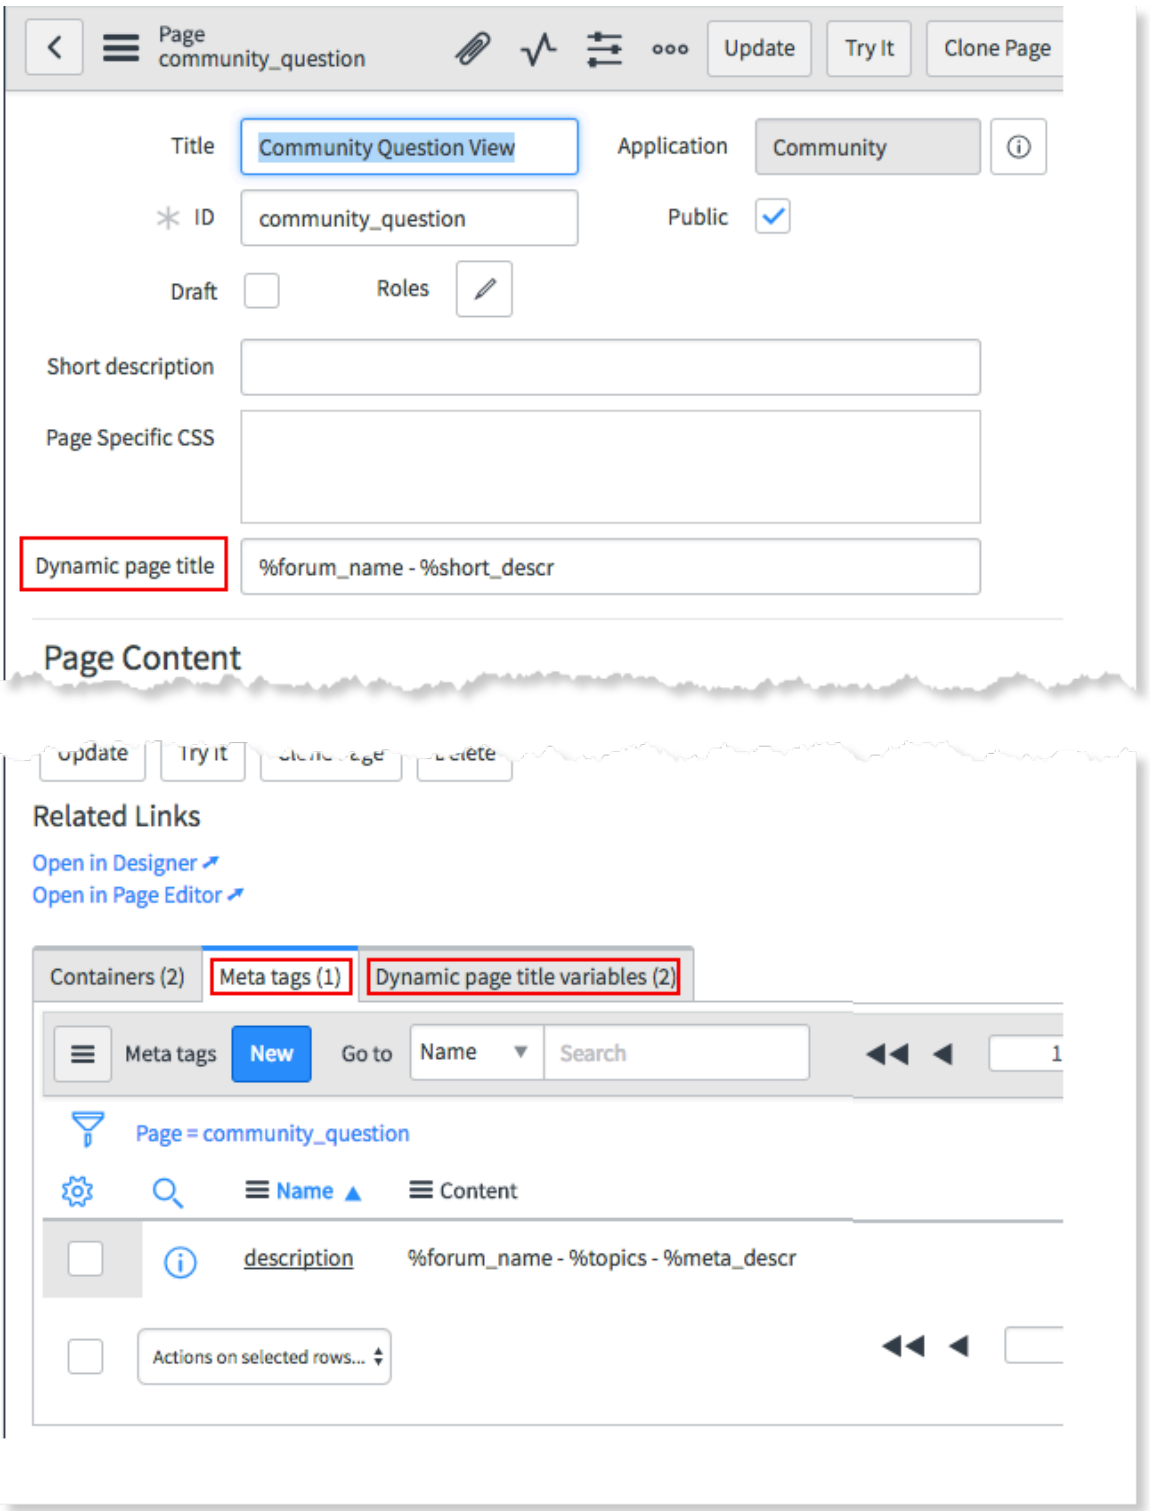
Procedure

1. Navigate to **All** > **Service Portal** > **Pages**.
2. In the list of portal pages, click the **ID** of the page to update (in the example, *community_question*).

   See the list of pages in Communities that support SEO data.
3. On the Page form:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Modify or add meta tags in the **Meta tags** related list.
- Modify the **Dynamic page title** by modifying the structure of the title text or by modifying or replacing the variables that generate the text. The variable definitions appear in the **Dynamic page variables** related list.



Using communities

Participate in your community by sharing content, asking and answering questions, creating events, giving feedback, and so on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Community homepage features for logged in users

Your community activity usually begins on the community homepage. If you are a logged in user, you see different information than non-logged in users. Your organization can customize the homepage.

Note:
The Community Service Portal header menu is not enabled by default. For more information, see Configure Community Service Portal header menus.

From the community homepage, you can access and use the following features:

Community homepage for logged in users

UI component	Description
Announcements	View announcements targeted to the entire community.
Community menu	Navigate to all forums and all topics and other quick links.
Tours	View a tour for additional guidance on how the Communities application works. Tours appear when your administrator creates them on certain pages.
Profile photo	Click your profile photo to either view your community profile or logout.
Search	Enter a search term. You can enter a keyword to use the type-ahead search or enter one or more words to view all search results.
Browse Forums	Click the + icon to view up to eight available forums. Click **View all Forums** to go to the Forums list page and search for the forum you require. If sub forums exist, they are listed on the parent forum tile along with a count of how many there are. Click the link to access a list of the sub forums.
Have a question? Click here to start typing and Post Content	Contribute to the community by posting a question. Click Question, Blog, Video, Document, or Event to add your content and assign it to a forum.
Featured Content	View featured community content.
Question filters	Filter by question to view solved, unsolved, and unreplied questions. **Note:** The content options are displayed according to the permissions you are assigned in the forum.
Content List and Activity Feed	Toggle between the Content List and Activity Feed. You can filter according to content type, forum, most recent or popular, and when the content was created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community homepage for logged in users (continued)

UI component	Description
	• Content List: Lists all content added to the community. Displays when updates were made to replies, comments, and answers marked as correct and which user made the updates. **Note:** ○ Updates are not displayed for new or existing comments or replies due for moderation. ○ Updates are displayed for approved changes made to comments or replies as a result of moderation. • Activity Feed: Lists all activity in the community based on your posts and subscriptions. **Note:** ○ All activities per content item are grouped. Only the most recent activity is listed per content item. For example, an upvote to a question. ○ To view all activity associated with a content item, click the content item. All activities, regardless of your subscriptions, are displayed.

Navigating the activity feed

The activity feed provides a central place for community users to view information and interact. It lists the most recent activity in the community based on your network, posts, and subscriptions. You can reply, comment, and give feedback directly from the activity feed.

Activity feed

UI component	Description
Levels	View the most recent levels you have earned in the community as a result of points accumulated. You can also view the most recent badge you have earned for your achievements or areas of expertise within the community.
Content added by another user	View the most recent contributions by another user that you are following or content that you have subscribed to.
Content added by you	View the most recent content that you created in the community.
Feedback	Provide feedback on content that you find useful. There are four supported types of content feedback: comment, upvote, helpful, and mark as correct answer.
Reply	Reply to a question or another reply.

Navigating the forum homepage

While in a forum, you can navigate the forum homepage and perform tasks, such as posting content.

Forum homepage

UI component	Description
Forum name and description	Displays the name and description of the forum. Click **Show more** to read more of the description.
Subscribe	Subscribe to content in the community.
Sub Forums	If sub forums exist, they are listed. Click a link to access a sub forum. If more than three sub forums exist, click **View all** to view the list of all sub forums and click the one you want to access.
Search Forum	Type a keyword and click the Search icon to view the matching content within a forum.
Have a question? Click here to start typing	Contribute to the community by posting a question.
Question filter	Filter by question to view solved, unsolved, and unreplied questions.
Content List	Lists all content added to the community. Displays when updates were made to replies, comments, and answers marked as correct and which user made the updates. Filter according to content type or sort by most recent or popular, and when the content was created. **Note:** • Updates are not displayed for new or existing comments or replies due for moderation. • Updates are displayed for approved changes made to comments or replies as a result of moderation.
Post Content	Click Question, Blog, Video, Document, or Event to add your content and assign it to a forum. **Note:** The content options are displayed according to the permissions you are assigned in the forum.
Announcements	View forum-specific announcements.
Topics	Click a topic to navigate to a particular topic.
Leaderboard	View the leaderboard to find community experts for the forum.
Most viewed content	Displays the top three posts according to number of views.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community homepage features for non-logged in users

Your community activity usually begins on the Community homepage. If you are a non-logged in user, you see different information than logged in users. Your organization can customize the homepage.

Community homepage for non-logged in users

UI component	Description
Community announcement	View announcements targeted to the entire community.
Community menu	Navigate to all forums, all topics, and other quick links.
Sign up/Login	Sign up or log in to the community.
Search	Enter a search term. You can enter a keyword to use the type-ahead search or enter one or more words to view all search results.
Browse community forums	Click the + icon to view up to eight available forums. Click **View all Forums** to go to the Forums list page and search for the forum you require. If sub forums exist, they are listed. Click a link to access a sub forum. If more than three sub forums exist, click **View all** to view the list of all sub forums and click the one you want to access.
Question filter	Filter by question to view solved, unsolved, and unreplied questions.
Content List	View content posted in public forums in the community. Filter according to content type or sort by most recent or popular, and when the content was created.
Why Join?	View some of the advantages of joining the community.
View Leaderboard	View the leaderboard to find community experts on specific forums or topics.
Ask a Question	Click **Ask a Question** and a message appears indicating that you must be a logged-in user to perform this action. You can **Login/Sign Up** directly from here.
Topics	Click a topic to navigate to a particular topic.
Show More	View an expanded list of content available in the community.

Self-register to a community

Once you have accessed a public forum and decided to join the community, you can self-register by signing up and accepting the community Terms and Conditions.

Before you begin

Role required: none

About this task

Every community user has to have a community account. Existing users who access a community for the first time have to accept the Terms and Conditions. An account is created once the Terms

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and Conditions have been accepted. New users sign up to the community and accept the Terms and Conditions.

If the community Terms and Conditions are updated, all community users are prompted to review and accept them when they log in the next time.

Procedure

1. If you are a new user, navigate to the community homepage.

   a. Click **Sign up/Login**.
   The **Sign Up** screen opens.

   b. Fill out the fields on the **Sign Up** form.

   Sign Up form

Field	Description
Email address	The email address to send the email validation to.
Username	A user name for your account.
First Name	Your first name.
Last Name	Your last name.
Phone Number	Your phone number.
Password	A password for your account.
Confirm Password	A confirmation of your password.
I agree to the Community Terms and Conditions	A check box to agree to the community Terms and Conditions.

   c. Click **Sign Up**.
   An email is sent to the email address you entered.

   d. Open the email and click the validation link.

   e. Click the **Click here to login** message.

   f. Log in with your user name and password.
   The **Welcome** pop-up opens.

   g. Confirm your time zone.

   h. Click **User Profile** or **Notification Preferences** to edit your community profile or your notification and subscription settings.

2. If you are an existing user, but visiting the community for the first time, click any community page.

   a. If required, change your **Display Name** on the **Setting up your account** pop-up.

   b. Select the check box to agree to the community Terms and Conditions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Welcome** pop-up opens.

c. Confirm your time zone.

d. Click **User Profile** or **Notification Preferences** to edit your community profile or your notification and subscription settings.

Search the community

Enter a keyword to use the type-ahead search on the Community homepage or enter one or more words to view all search results.

Before you begin

Role required: sn_communities.community_user

Procedure

1. Navigate to the community homepage.
2. Press the space bar to use the type-ahead search and enter a keyword in the **Search Community** field.
3. Choose from the following options:
   a. Click a content item, topic, forum, or profile that matches your search.
   b. To enter your question, blog, or video if no matching content is displayed, click **Ask the Community**.
   c. To display all search results, click **View all Results**.
4. Alternatively, enter one or more keywords in the **Search Community** field and press the Enter key.
   A list of matching search results appears.

Refine your search results

Refine your search results to narrow down the content displayed.

Before you begin

Role required: sn_communities.community_user

Procedure

1. Navigate to the community homepage.
2. Enter a keyword in the **Search** field.
3. From the **Refine Results** panel, choose from the following options.
   - To filter and customize your search results, click any option under **Types**. For example, click Profile to view the profiles that matches with the search keyword. The details of the profile such as display name, gamification information-points and badges, bio, user title and company appear. To reverse this action, click the **x** icon of the corresponding item. To remove all filters, click **Clear All**.
   - Select any item from the **Forums**, **Topics**, or **Authors** fields to filter by forum, sub forum, topic, or author. You can add multiple forums, sub forums, topics, and authors and click anywhere on the screen to display the results.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To filter by the time period that the content was posted, click any **Last Updated** item.
- Click the **–** icon of any category to collapse the category and save space. Click the **+** icon to restore a collapsed category.

The search results page displays content based on the filter criteria.

Sort your search results

Sort your community search results to narrow down the content displayed.

Before you begin
Role required: sn_communities.community_user

About this task
The search results are sorted according to **Relevance** by default.

Procedure

1. Navigate to the community homepage.
2. Enter a keyword in the **Search** field.
3. To display the most recent results, click **Sort By: Newest**.
   The results are displayed in descending order.
4. To display the results in ascending order, click **Newest**.

Use a community profile

The community profile displays an overview of a user's personal information as well as their contributions, network, achievements, expertise, and events they are attending. You can view and edit your own profile. You can also view another user's profile and perform actions, such as following them or reporting inappropriate content.

Before you begin
Role required: sn_communities.community_user

Procedure

Perform one or more of the following tasks from the community profile.

Manage your community profile

View and edit your own community profile, which displays your contributions, network, achievements, expertise, and events you are attending.

Before you begin
Role required: sn_communities.community_user

About this task
There are two ways of accessing your community profile.

Procedure

1. From the Community homepage, perform one of the following actions.
   - Click the **Community** menu and then **Community Profile**.
   - Click your name or profile photo and then **Profile**.
2. View the sections on your community profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community profile

Section	Description
Profile header	An overview of your personal information. ○ Click **Edit Profile** to change your profile photo and edit your personal information. ○ Click **Edit Profile** to change your user preferences. Update your time zone to view when events are occurring in your selected time zone. ○ Click the **...** icon and then **Display Settings** to set your display settings and determine who can view which sections of your profile. If the gamification feature is enabled, the profile header includes your current gamification achievements, including: ○ The top three badges that you have been awarded ○ The total number of points that you have earned ○ The current level that you have achieved based on your point total (for example, Enthusiast or Champion)
Content tab	An overview of the published and draft content you have created and the content you have bookmarked. ○ **Authored**: Content you contributed. You can select the content type and the forum, and sort by state. ○ **Drafts**: Content you contributed that is in draft state. You can select the content type and the forum. Open a draft to publish it. **Note:** You can only save content in draft for blogs and events. ○ **Bookmarks**: Content that you have bookmarked. You can select the content type, the forum, and sort by recent or oldest. You can also remove bookmarks.
Activity tab	The most recent actions performed by you in the community, for example, commenting on a post or providing feedback.
Network tab	A record of your network in the community. ○ **Followers**: The users that are following you. ○ **Following**: The users that you are following.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Section	Description
	○ Click **Follow** to start following a user, who is following you. ○ Point to **Following** and click **Unfollow** to stop following a user.
Achievements tab	An overview of your gamification achievements. ○ **Levels**: A list of the available levels that you can achieve, including the starting point value, with your current level highlighted in blue. ○ **Badges**: A list of the badges that you have been awarded as well as available badges. Awarded badges appear at the top of the list and available badges appear below. You can filter this list to view awarded badges or all badges. ○ **Points**: A history of the points that you have earned and the activities performed that earned the points. This information also includes the forum in which the activity was performed. This list includes your last 50 activities. Click **Show more** to display additional pages.
Events tab	A list of events that you created, are attending, or past events you have attended. Click an event to view the event details.
Contributions	The number of your content and feedback contributions to the community.
Forum Expertise	A display of your expertise at forum level. You can view your level within the forum and the number of points you have gained through contributing to that forum. Click the information icon to view the point ranges required to reach each forum level.
Topic Expertise	A display of your expertise at topic level. You can view your level within the topic and the number of points you have gained through contributing to that topic. Click the information icon to view the point ranges required to reach each topic level.

View another user's community profile

View another user's community profile to see their contributions, network, expertise, and so on. You can also manage your network by following and unfollowing other community users.

Before you begin

Role required: sn_communities.community_user or sn_communities.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Click the user's name or profile photo for the community profile that you want to view.
2. View the sections of the user's community profile.

Community profile

Section	Description
Profile header	The sections of the community profile that the user has made visible. ○ To start following the user, click **Follow**. ○ To report any inappropriate content on the user's community profile, click the **...** icon and then **Report Profile**. ○ To assign a user points for a specific contribution to the community as a community administrator, click the **...** icon and then click **Assign Points**. ○ To hide content from the community until it is corrected as a community administrator, click **Display Settings** You can also click **Ban User** to ban a user from creating or editing content.
Content	○ **Authored**: Content that the user contributed. ○ **Featured**: Content the user posted that has been featured. ○ **Drafts**: Content the user contributed that is in draft state. **Note:** Only community administrators can view draft content of another user. ○ **Bookmarks**: Content that the user has bookmarked.
Activity	The most recent actions performed by the user in the community, for example, commenting on a post or providing feedback.
Network	○ **Followers**: The users that are following the user's community profile. ○ **Following**: The users that the community profile user is following. ○ You can manage your own network from another user's profile. To start following a user, click **Follow**. To stop following a user, point to **Following** and click **Unfollow**.
Achievements	An overview of the user's gamification achievements.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Section	Description
	○ **Levels**: A list of the available levels that the user can achieve, including the starting point value, with the user's current level highlighted in blue. ○ **Badges**: A list of the badges that have been awarded to this user. ○ **Points**: A history of the points that this user has earned and the activities performed that earned the points. If the user has earned points in a forum that you do not have access to, the name of the forum is replaced with **Private forum**.
Events	A list of events that the user has created, is attending, or past events that the user has attended. Click an event to view the event details and respond.
Forum Expertise	A display of the user's expertise at the forum level. You can view their level within the forum and the number of points they have gained through contributing to that forum. To view the point ranges required to reach each forum level, click the information icon.
Topic Expertise	A display of the user's expertise at the topic level. You can view their level within the topic and the number of points they have gained through contributing to that topic. To view the point ranges required to reach each forum level, click the information icon.
Contributions	The contributions the user has made to the community.

Follow a community user

Manage your network by following other community users and tracking their activity in the community.

Before you begin

Role required: sn_communities.community_user

About this task

There are several ways of following users in the community.

Procedure

1. From the Communities homepage, perform one of the following actions.
   - Click your profile name or photo.
   - Click your profile name or photo and then the **Network** tab.
   - Click another user's profile name or photo and then the **Network** tab.
2. Click **Follow** for every user you want to follow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The state changes to **Following**. Your Activity Feed is updated with the activity those users have taken in the community.

3. **Optional:** Point to **Following** and click **Unfollow** to stop following a user.

Edit your community profile photo and personal information

Change your community profile photo and edit your personal information.

Before you begin

Role required: sn_communities.community_user

You can only edit your community profile if you are logged in to the community.

Procedure

1. From the Community homepage, select your name or profile photo and then select **Profile**.
2. To change your profile picture, click **Upload Picture**.
   A file system upload is initiated. Choose an image in `.png` or `.jpg` format and click **Open**.
3. To change any field value, select the value to display a pop-up window.
4. In the field value pop-up window, select the desired value and click **Save**.

The following table includes a description of the fields on the User Profile page.

User Profile fields

Field	Description
Company	Name of your employer.
Title	Your job title.
Department	Your job department.
Location	Your address, city, and state.
Bio	A short description about yourself.
Email	Your email address. **Note:** Use the email address used in your instance profile or the reset password features cannot be used.
Business phone	The work telephone number where people can reach you.
Mobile phone	Your mobile telephone number.
Language	Your preferred language.
Time zone	The time zone in which you work or reside.
Accessibility enabled	Use this toggle button to enable accessibility features.

Edit your community profile display settings

Edit your display settings to determine who can view each profile section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.community_user, sn_communities.admin or sn_communities.moderation_admin

About this task
You can edit your own display settings for your community profile. If a community administrator finds inappropriate content on your profile, they can edit your display settings to hide the content from the community until it is corrected.

Procedure
1. On the community homepage, click the **Community** menu and then click **Community Profile**.
2. Click the **...** icon and then click **Display Settings**.
3. Open the choice lists and select display settings for any section.
4. Choose the privacy level to apply.

Privacy levels

Privacy level	Description
Everyone	Visible to all users, including non-logged in users.
Only me	Visible to yourself and administrators. If an administrator finds inappropriate content on your profile, the administrator can change the display settings to **Only me** until the content is modified. You receive an email notification detailing the display settings that were modified for which sections. Update the content and adjust the display settings accordingly.
Everyone after logging in	Visible to all users who access the community after logging in.
Followers	Visible to users who are following your profile.

5. Click **Save Settings**.

Report a community profile

Report a community profile to alert community moderators that there is offensive or inaccurate information in the profile.

Before you begin
Role required: sn_communities.community_user

Procedure
1. Click the name or photo of the user to report.
2. Click the **...** icon and select **Report Profile**.
3. From the list, select the reason you are reporting the user and add **Additional Comments**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click **Submit**.
   - A confirmation message indicating that the abuse report has been received and will be reviewed is displayed.
   - A moderation task is created and assigned to a moderator for resolution.

Community subscriptions

Using subscriptions, you can choose specific areas of interest. Your activity feed and notifications are personalized according to your subscriptions.

Subscription types

Subscription type	Description/Features
Subscription	• Subscribe or unsubscribe to forums, topics, and community content (questions, answers, blogs, and video). • Auto-subscribe: Whenever you post content, you are automatically subscribed to the content itself. You are also automatically subscribed when you post a reply or a comment.
Activity feed	Displays activities based on your subscriptions with the most recent at the top.
Notification settings	• Manage your subscriptions using **Notification Settings**. • For each of your subscriptions, set email notifications using **Notification Preferences**.

Subscribe to content

Subscribe to forums, topics, questions, blogs, and videos. You are automatically subscribed to content that you create.

Before you begin

Role required: sn_communities.community_user

Procedure

1. To find the content of interest, use the search field or navigation to find the content of interest, such as a forum, topic blog, or video.
2. On the content page, click **Subscribe**.
   - A confirmation message indicating that you have successfully subscribed to the content is displayed at the top of the screen.
   - You receive a notification whenever there is an update to this content, for example, an answer to a question or a comment on a blog entry.
   - You can view updates in your activity feed.
3. **Optional:** To remove a subscription, return to the content and click **Subscribed**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you point to this option, it becomes **Unsubscribed**.

You can also view your notifications and subscriptions and enable or disable them. For details, see Set notification preferences.

Related topics

Set notification preferences

Community subscriptions

Set notification preferences

Set notification preferences to receive updates via email on the content that you are following.

Before you begin
Role required: sn_communities.community_user

About this task
The Communities application separates the notion of subscriptions from notifications. It is possible to subscribe to an item and disable notifications. You can also turn off all notifications.

Procedure

1. Select **Community** > **Notification Settings** from the header.
2. Click **Notifications and Subscriptions**.
3. Choose your category, such as **Forums**, **Topics**, **Blogs**, or **Videos**, to manage your notifications in those areas.
4. In the **Email** column, toggle any item that should or should not send updates.
5. **Optional:** To turn all notifications on or off, toggle **All Notifications**.

Note:

(Optional) Activity subscription modules will not be displayed in the **Navigations and Subscriptions** page, when you enable the disable_notifications flag.

The isNotificationDisabled API checks the value of the disable_notifications flag. This API can also be used for blocking notification of other activity subscription modules.

Request membership to a forum

You must be a registered member of the community to request membership to a forum that is marked for membership only.

Before you begin
Role required: sn_communities.community_user

Procedure

1. Perform either one of the following actions:
   - Navigate to **Community** > **Homepage**. Open **Browse Community Forums** and then select the forum.
   - Navigate to **Community** > **All Forums** and then select the forum in the list. If you requested membership earlier, the status of your request appears.
2. Click **Request Access**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If approval is required, **Status** changes to **Requested**. You receive an approval or rejection email. If approved, you are immediately subscribed to the forum and **Status** changes to **Private Member**.

If no approval is required, the request is auto-approved and **Status** changes to **Private Member**.

3. **Optional:** To cancel a request, point to the **Requested** status and click **Cancel**.
4. **Optional:** To leave a forum, click **...** within the forum and then select **Leave Forum**. **Status** changes to **Request Access**.

Communities roles

Accept an invitation to join a forum

An invitation to join a forum is sent as an email message. The method that you use to accept an invitation depends on whether you are a registered community user.

Before you begin

Role required: none

Procedure

1. Open the email invitation and click **Join Forum**.
   - If you are a registered and logged-in community user, the forum opens.
   - If you are a registered community user but have not accepted the community Terms & Conditions, a message appears to accept the Terms & Conditions. The forum opens after you accept the Term & Conditions.
2. If the login page appears, take one of the following actions.

Option	Description
If you are a registered user and not logged in.	Enter your login credentials to access the fo rum.
If you are not a registered user.	**a.** Click **Sign Up** on the login page. **b.** Enter your email address, a user name, and a password to create a community account. **c.** The system sends a verification email. Click the verification link in the email to confirm your credentials. **d.** Reopen the email invitation and click **Join Forum**.

Forum membership is auto-approved and you are subscribed to the forum. **Status** changes to **Leave Forum**.

Post and respond to content in the community

Post and respond to content in the community to get answers or share information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.community_user

Procedure

Perform one or more of the following tasks from the community homepage.

Ask a question in the community

Ask a question in a forum to get an answer from other community users.

Before you begin
Role required: sn_communities.community_user

You can only ask a question in a forum if you have been assigned the correct permissions.

About this task
If you ask a question, you can edit or delete it. If you created the question and reply with an answer, your answer is labeled **Author**.

There are three ways of asking questions in Communities.

Procedure
1. From the Communities homepage, perform one of the following actions.
   - Locate the forum to ask a question in, click its name, and then click **Have a question? Click here to start typing.** Type-ahead search shows related posts. Click to open a related post in another page.
   - Locate the forum to ask a question in and click **Post** > **Question**.
   - If you do not see a forum, click **Have a question? Click here to start typing.**
2. Click **Question**.
3. On the form, fill in the fields.

Ask a question form

Field	Description
Question	Your question.
Forum	Forum to add the question to. **Note:** If you created the question by clicking a forum from the Communities homepage, this forum is automatically entered in this field.
Topic (s) (optional)	Topic to add the question to. **Note:** You can repeat this previous step for as many topics as you want. If you change your mind about a particular topic, click its corresponding **x** icon.
Description	Content of the question. To insert an image, click the **Insert Image** button ( ), navigate to the `.png` or `.jpg` file, and then click **Open**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	To insert a video, click the **Insert Video** button ( ), enter the video URL, and then click **Upload**.
Add attachments	To attach a file, click **Add attachments** and then drag the file into the **Attach Document** box or click the box and then navigate to the file. ○ You can add up to three attachments. ○ File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP. ○ Maximum file size is 2 MB. ○ Supported file types are listed. ○ Click the X icon to delete an attached file. **Note:** Your system administrator may have set a limit on the total number of attachments allowed across the community. When you click **Add**, your attachments are added and displayed in the question. If a user attaches a file to your question, you receive an email notification. **Note:** If antivirus protection is enabled, all attachments are automatically scanned for viruses once the question is posted.

4. Click **Post**.
   - The question is added and is available to users in this forum. You are automatically subscribed to this question. When there is a reply, you receive a notification.
   - Community users who are subscribed to the forum receive a notification that content has been posted. Activity and content feeds are updated accordingly.
   - If you have added attachments to your question and your community administrator has enabled antivirus protection, a scan automatically runs in the background.

     Note:
     - If the scan is successful, the attachments are available to download.
     - If the scan is in process or unsuccessful, the file is unavailable for download.
     - Question authors and community administrators receive a notification that an attachment is infected.

   - Click **Edit** to remove the infected file and upload the attachment again. You cannot add any more attachments until the infected file is removed.
   - If you are a user whose content is due to be moderated, the content is not posted until approved by a community moderator.

Reply to a question in the community

Reply to a question or another reply.

Before you begin

You can only reply to a question or another reply in a forum or sub forum if you have been assigned the correct permissions.

Role required: sn_communities.community_user

Procedure

1. To find the question or a reply to respond to, use search or navigation from the community homepage.
   You can also reply to a question or a reply from the activity feed on the homepage.
2. Click **Reply**.
3. Enter your reply.
4. **Optional:** If required, you can add an image to your reply.
   a. Click the Insert image-editing control.
   b. Choose your `.png` or `.jpg` format image file.
   c. Click **Open**.
5. **Optional:** If required, you can add a video to your reply.
   a. Click the **Insert Video** button ( )
   b. Enter the video URL.
   c. Click **Upload**.
6. **Optional:** You can add attachments to your post.
   a. Click **Add Attachments**.
   b. Drag your file into the **Add Attachments** box or click **Click to Upload**.
   c. Click **Add**.
   Your attachment is added and displayed in your post. If a user attaches a file to your content, you receive an email notification.

   Note:
   - You can add up to three attachments per post.
   - The maximum file size per attachment is 2 MB.
   - Your system administrator may have set a limit on the total number of attachments allowed across the community.
   - File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP
   - If antivirus protection is enabled, all attachments are automatically scanned for viruses once the reply is posted.
7. Click **Reply**.
   The reply is added below the question and any other replies. The reply is available to users in this forum.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community users who are subscribed to the forum receive a notification that content has been posted. Activity and content feeds are updated accordingly.

Note:
If you are a user whose content is due to be moderated, the content is not posted until approved by a community moderator.

If you have added attachments to your reply and your community administrator has enabled antivirus protection, a scan automatically runs in the background.

- If the scan is successful, the attachments are available to download.
- If the scan is in process or unsuccessful, the file is unavailable for download.
- Reply authors and community administrators receive a notification that an attachment is infected.
- Click **Edit** to remove the infected file and upload the attachment again. You cannot add any more attachments until the infected file is removed.

8. Click **Mark as Correct Answer** after reviewing the reply posted.

Note:
Author of the question, forum or community admin, and forum or community moderator review the post.

If an accepted solution has infected attachments, an email notification is sent to the author, admins, and or moderators who must unmark the answer as the accepted solution. Author of the answer gets a notification to update the post.

Post a blog in the community

Create a blog post and publish it immediately, schedule to publish at a specified date, or save it as a draft.

Before you begin

You can only post a blog in a forum or sub forum if you have been assigned the correct permissions in the parent forum.

Role required: sn_communities.community_user

About this task

You can post, edit, and delete a blog. If you comment on the blog that you create, your answer is labeled as **Author**.

Procedure

1. Locate the forum to create a blog in and click its name.
2. Click **Post** and then click **Blog**.
3. On the form, fill in the fields.

Post a blog form

Field	Description
Blog Title	Title for your blog.
Forum	The forum or sub forum to add the blog to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: When you create the blog by clicking a forum or sub forum from the Community homepage, the forum or sub forum name is automatically displayed in the field.
Topic (s) (optional)	Topic to add the blog to. **Note:** You can repeat this step to add as many topics as you want. To delete a particular topic, click its corresponding **x**icon.
Description	Content of the blog. To insert an image, click the **Insert Image** button ( ), navigate to the .png or .jpg file, and then click **Open**. To insert a video, click the **Insert Video** button ( ), enter the video URL, and then click **Upload**.
Add attachments	Click **Add attachments** and then drag the file into the **Attach Document** box. Alternatively, click the box and then navigate to the file. ○ You can add up to three attachments with supported file types. ○ File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP. ○ Maximum file size is 2 MB. ○ Click the X icon to delete an attached file. **Note:** Your administrator may have set a limit on the total number of attachments allowed across the community. Click **Add**. If a user attaches a file to your blog, you receive an email notification. **Note:** If antivirus protection is enabled, all attachments are automatically scanned for viruses when the blog is posted.
Schedule Publish	Click the check box to publish the blog on a specified date. Select the date, time, and time zone of the blog. The scheduled blog is only visible for author and administrator until it is published. **Note:** For a blog that has approval workflow, the blog state changes to "Ready to publish" when it is approved before the scheduled time. If a blog is approved after the scheduled time, the state changes to "Published".

4. Complete one of the following actions to save your blog.

Post a video in the community

Post a video in a forum or sub forum.

Before you begin

Role required: sn_communities.community_user

You can only post a video in a forum or sub forum if you have been assigned the correct permissions in the parent forum.

About this task

You can post videos on their own or add them to a question or a blog. If you are the creator of the video or a community administrator, forum administrator, forum moderator, or community moderator, you can edit the videos once posted.

Procedure

1. While in a forum, click **Post** > **Video**.
2. On the form, fill in the fields.

Post a video form

Field	Description
Click here to Insert a Video	○ URL of your video. ○ Click **Upload**. The video is added to your post. ○ To edit and replace the current video with another one, click **Select a different Video**.
Video Title	Title for the video.
Forum	Read-only. The forum or sub forum is automatically entered in this field.
Topic (s) (optional)	Topic to add the video to. **Note:** You can repeat this step for as many topics as you want. If you change your mind about a particular topic, click its corresponding **x**icon.
Description (optional)	Description for your video.

3. Click **Post**.
4. **Optional:** If you have permission to edit or delete the video, click a video, click the corresponding ••• icon, and then click **Edit** or **Delete**.

Once a video is uploaded, other community users can comment on it, give feedback, subscribe to the video, bookmark it, and report any inappropriate content in the video.

Comment on a blog or a video in the community

Comment on a blog or a video or comment on another comment.

Before you begin

You can only comment in a forum or sub forum if you have been assigned the correct permissions in the parent forum.

Role required: sn_communities.community_user

About this task

If you create a comment, you can edit or delete it. If you created the blog or video and add a comment, your comments are labeled **Author**

.

Procedure

1. To find the blog or video entry to comment on, use the search field or navigation.
2. Click **Comment**, and enter your answer.
3. You can add attachments to your post.

   a. Click **Add Attachments**.

   b. Drag your file into the **Add Attachments** box or **Click to Upload**.

   c. Click **Add**.
   Your attachment is added and displayed in your post. If a user attaches a file to your comment, you receive an email notification.

   Note:

   - You can add up to three attachments per post.
   - The maximum file size per attachment is 2 MB.
   - Your system administrator may have set a limit on the total number of attachments allowed across the community.
   - File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP.
   - If the attachment size is large or you have a slow connection, a progress indicator is displayed.
   - If antivirus protection is enabled, all attachments are automatically scanned for viruses once the reply is posted.

4. Click **Comment**.
   The comment is added below the blog or video entry and any other comments. The answer is available to users in this forum.

   Community users who are subscribed to the forum receive a notification that content has been posted. Activity and content feeds are updated accordingly.

   Note:
   If you are a user whose content is due to be moderated, the content is not posted until approved by a community moderator.

   If you have added attachments to your comment and your community administrator has enabled antivirus protection, a scan automatically runs in the background.

- If the scan is successful, the attachments are available to download.
- If the scan is in process or unsuccessful, the file is unavailable for download.
- Comment authors and community administrators receive a notification that an attachment is infected.
- Click **Edit** to remove the infected file and upload the attachment again. You cannot add any more attachments until the infected file is removed.

Post a document in the community

If you have the proper permissions in a forum, you can share a document with colleagues, experts, or other community users. You can associate the document with as many topics as needed.

Before you begin

Role required: sn_communities.community_user

Procedure

1. While in a forum, click **Post** > **Document** and then fill in the form:

Document configuration form

Document title	Enter a descriptive title for the document.
Forum	Read-only. The current forum or sub forum is selected.
Topics	Select a topic from the list. Repeat for as many topics as needed.
Attach document	To attach a file, drag the file into the **Attach Document** box or click the box and then navigate to the file. ○ You can attach only one document. ○ Maximum file size is 5 MB. ○ File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP. ○ Click the X to delete an attached file. **Note:** Your administrator may have set a limit on the total number of attachments allowed across the community. If antivirus protection is enabled, all attachments are automatically scanned for viruses when you click **Post**.
Description	Enter a useful description for the document.

2. Click **Post**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_communities.admin or sn_communities.community_user

Procedure

Perform one or more of the following tasks.

Post a community event

You can create a community event that other community users, colleagues, or experts can register for and attend.

Before you begin
You must have permission to create events (**Event Write and Comment Write**) and be a member of the forum to create the event in. The **Event** content type must be active in the forum for the event.

Role required: sn_communities.community_user

Procedure

1. While in a forum, click **Post** > **Event** and then fill in the form.

Create an event

Field	Description
Event title	A title for your event.
Forum	Read-only. The forum is automatically entered in this field.
Topic(s) optional	A topic to add the event to. **Note:** You can add as many topics as needed. To remove a topic, click the **x**.
Set guest limit / Total allowed	Select the check box to specify the maximum number of guests that can attend in the **Total allowed** field. When the number of guests reaches to the limit, additional users are added to the wait list.
Display guest list to the public	Select the check box to enable forum members to view the guest list for the event.
This is an online event	For an online event, click the check box.
Name of location	For an online event, the text specified in the **Name of Location** appears as a label with a hyperlink to the specified **Web URL**. For example, enter the text as 'Click Here to Join the meeting' to facilitate your subscribers to join the meeting. For an offline event, enter the **Name of location**, **Address**, **City**,**State**, **Zip/ Postal Code**, and **Country** to mention the venue.
Web URL	Enter the Web URL of an online event for your subscribers to click and join.
Date and time	The date and time of the event. **Date** must be in the future.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If you change the **Duration**, the **End Time** is auto-updated. Click **Change time zone** to set the time zone for the event. Default: Your local time zone. The time zone changes according to the time zone of the user viewing the event.
Duration	The duration of the event. **Note:** If you change the **End Time**, the **Duration** is auto-updated. By default, the duration is 30 minutes
Send reminder to guests one day before the event	Select the check box to send an email reminder one day before the event to all users that responded **Attend**.
Description	The description of the event. To insert an image, click the **Insert Image** button ( ), navigate to the .png or .jpg file, and then click **Open**. To insert a video, click the **Insert Video** button ( ), enter the video URL, and then click **Upload**.
Add attachments	Click **Add attachments** and drag the file into the **Attach Document** box or click the box and then navigate to the file. ○ You can add up to three attachments. ○ File types supported are PPT, PPTX, XLS, XLSX, DOC, DOCX, TXT, PDF, PNG, BMP, JPG, JPEG, GIF, ZIP. ○ Maximum file size is 2 MB. ○ Click the X icon to delete an attached file. **Note:** Your system administrator may have set a limit on the total number of attachments allowed across the community. When you click **Add**, your attachments are added and displayed in the event. If a user attaches a file to your event, you receive an email notification.
Schedule Publish	Click the check box to publish an event on a specified date. Select the date and time of the event. By default, the schedule time zone is same as event time zone. The scheduled event is only visible for author and administrator until it is published.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: For an event that has approval workflow, the event state changes to "Ready to publish" when it is approved before the scheduled time. If an event is approved after the scheduled time, the state changes to "Published". You cannot schedule a published event.

View and participate in a community event

You can view details for published events and perform tasks such as responding to the event or adding it to your calendar.

Before you begin

You must be a registered member of the community and have permission to read events (**Event Read and Comment Write**) to be able to respond to events.

Role required: sn_communities.community_user

Procedure

1. From the community homepage, perform one of the following actions.
   - Navigate to the Content List.
   - Navigate to the Activity Feed.
   - Navigate to a forum or topic.
   - Navigate to the community profile of another user and click the **Events** tab.
   - Click **Community** > **Events**.
2. Click an event.
   The Event details page displays the following information.

Community event details

Event header	○ View the name of the event, who created it, and when. ○ If the event organizer chose to display the guest list to the public, you can view how many community users have responded **Attending** or **Maybe** and click the numbers to see the names. ○ If the guest list is private, you can view how many community users have responded **Attending** or **Maybe**, but you cannot see the names. ○ View the number of spots still available in the event or your position on the waitlist. ○ If the event is taking place in the same time zone as you set in your user preferences, the **Event time zone** is displayed. ○ If the event is taking place in a different time zone to the one that you set in your user preferences, both **Event time zone** and **Your time zone** are displayed.
Event overview	○ When and where the event is taking place. ○ Description of the event. ○ Topics associated with the event. ○ Comments on the event. ○ Number of times the event has been viewed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Upcoming Events	Next five upcoming events.
Popular Past Events	Top five most popular past events and the number of community users that were interested in the event. Interested community users include users who either attended or were waitlisted for the event.

3. **Optional:** Click **Attending**, **Maybe**, or **Declined** to view or search the guest list and their responses.
4. **Optional:** Click **Subscribe** to subscribe to the event and receive notifications when the event is updated.
   If your response is **Attending** or **Maybe**, you are auto-subscribed to the event.
5. **Optional:** Click **Respond** to indicate whether you are attending or maybe attending the event, to decline, or to add yourself to the waitlist.
   - You can also respond to an event directly from the Activity Feed.
   - If the event is full, a message stating that you can join the waitlist is displayed. The **Attend** option replaces **Waitlist**. If you are waitlisted, your position on the waitlist is displayed. Once a position becomes available in the event, you move up in the list.

   Depending on your selection, the status changes to either **Attending**, **Maybe**, **Declined**, or **Waitlisted**. You can update your response as needed.
   - If an event creator or community admin deletes an event and you responded **Yes**, **Waitlist**, or **Maybe**, you receive an email notification based on your notification preferences.
   - If an event is updated, and you responded **Yes**, **Waitlist**, or **Maybe**, you receive an email notification based on your notification preferences.
6. **Optional:** Click **...** to perform one of the following actions.

Option	Description
Add to calendar	Downloads an .ics file that you can add to your calendar. The file includes the title and description of the event, the event location, start and end dates, the event time, and any attachments. If guests have chosen not to share details, the information is not displayed in the file.
Bookmark	The event appears in your bookmarks list on your profile page. Click **Remove Bookmark** to delete a bookmark.
Report content	Click **Report content** to report inappropriate content in the event.

View the community events landing page

The Events landing page provides an overview of all events that you have access to in the community. You can filter events, view your status for the event, see how many other community users are attending an event, and so on.

Before you begin

Role required: sn_communities.community_user

Community users must have permission to view events (**Event Read**).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Community** > **Events**.
   The Events landing page displays a list of all events that you have access to and a list of the five most popular past events.
2. Filter the list for events that you created or according to attendance status, by forum, and by date.
   The list displays the following information.
   - The event creator, last update, and location.
   - Your status, if you have already responded to the event.
   - The number of community users who are interested in the event. Interested community users include users who are attending or have been waitlisted for the event.
   - The number of community users who have viewed the event.
3. Click an event to perform tasks related to the event.

Manage a community event

View additional response information on the event, edit or delete events, and download a guest list.

Before you begin

You must be a registered member of the community and have permission to read events (**Event Read and Comment Write**) to be able to respond to events.

Role required: sn_communities.community_user who created the event or sn_communities.admin.

About this task

You can access published events from several places within the community.

Procedure

1. From the community homepage, perform one of the following actions.
   - Navigate to the Content List.
   - Navigate to the Activity Feed.
   - Navigate to a forum or a topic.
   - Navigate to another user's community profile and click the **Events** tab.
   - Click **Community** > **Events**.
2. Click an event.
   The Event details page displays the following information.

Community event details

Event header	○ View the name of the event, who created it, and when. ○ View how many community users are attending or maybe attending. ○ View how many community users declined the event. ○ View the number of spots still available in the event or your position on the waitlist.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Event overview	○ When and where the event is taking place. ○ The description of the event. ○ The topics associated with the event. ○ Comments on the event. ○ The number of times the event has been viewed.
Upcoming Events	Shows the next five upcoming events.
Popular Past Events	Shows the top five most popular past events and the number of community users that were interested in the event. Interested community users include users who either attended or were waitlisted for the event.

3. **Optional:** Click the **...** icon.
4. You have the following options.

Option	Description
Edit	Click **Edit**. The **Update Event** page opens. An email notification is sent to all community users who responded **Yes**, **Maybe**, or **Wait list**.
Delete	Click **Delete**. A warning message appears asking if you are sure that to delete the event. An email notification is sent to all community users who responded **Yes**, **Maybe**, or **Wait list**.
Add to calendar	An `.ics` file is downloaded that you can add to your calendar. The file includes the title and description of the event, the event location, start and end dates, the event time, and any attachments. If guests have chosen not to share their details, the information is not displayed in the file download.
Bookmark	The event appears in your bookmarks list on your profile page. If you have already bookmarked the event, you can click **Remove Bookmark**.
Report content	As a community admin, click **Report content** to report inappropriate content in the event.
Download Guest List	Download a `.csv` file of the guest list. View the file to see the list of community users attending the event, their RSVP status, and email address.

Bookmark community content

You can bookmark your favorite questions, blogs, videos, documents, and events. You cannot bookmark content in draft state or replies or comments.

Before you begin

Role required: sn_communities.community_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Click the content to bookmark.
2. Click the **...** icon and then select **Bookmark**.
   The bookmarked content is added to the **Bookmarks** tab on your community profile.
3. To view your bookmarks, perform one of the following actions.
   - Navigate to your community profile and then click **Content** > **Bookmarks**.
   - Click your name or profile photo and then click **My Bookmarks**.
4. You can search for bookmarks and, if required, select a bookmark and then click **Remove Bookmark**.

Provide feedback on community content

Provide feedback on content that you find useful.

Before you begin

Role required: sn_communities.community_user

About this task

There are four supported types of content feedback: comment, upvote, helpful, and mark as correct answer. You can enter feedback directly in the Activity Feed on the Community homepage or navigate to the content you want to provide feedback on.

Content Feedback

Content feedback	Description
Comment	Comment on blogs and videos. You can also comment on a comment. The count of comments is displayed.
Upvote	**Upvote** questions. The count of upvotes is displayed.
Helpful	Mark answers, blogs, comments, and videos as **Helpful**. The count of helpful marks is displayed.
Mark as Correct Answer	If you are a community or forum administrator, community or forum moderator, or the author of the question, you can mark one answer as **Mark as Correct Answer**. There is only one correct answer for each question. If you later mark a different answer as correct, the current answer loses this status.

Procedure

1. From the Community homepage, perform one of the following actions.
   - Click a forum and then click the content, for example, a blog or a question.
   - Use search and then click the content.
   - Navigate to the content on the homepage **Activity Feed** and provide your feedback directly from here.
2. Enter your feedback.
   The following feedback is displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback types included in the community content

Community homepage > **Activity Feed**	Feedback on any content that users are subscribed to.
Community homepage > **Content List**	Feedback entered by other users.
Your **Community Profile** > **Activity** tab.	Feedback entered by you.

Note:
The homepage activity feed is not automatically refreshed. If updates occur while viewing the activity feed, a **New Updates Available** message appears. You can click and view all new updates. If you are in the middle of making a comment and you click **New Updates Available**, a warning message appears asking if you want to continue.

Report inappropriate community content

Report content to alert community moderators that the content is inappropriate or spam.

Before you begin

Role required: sn_communities.community_user

Procedure

1. Use the search field or navigation to find the content to report.
2. Click the **...** icon and then click**Report Content**.
3. From the list, select the reason you are reporting the content from the list and add **Additional Comments**.
4. Click **Submit**.
   A moderation task is created and assigned to a moderator for resolution. Depending on the moderation settings created for your community, the content may be hidden until a moderator has reviewed it.

Add featured content in a community

Add or edit featured content in a community to appear in the Featured Content section on the community homepage, forum homepage, or both.

Before you begin

Set the following properties as required.

Featured content properties

Property name	Description
sn_communities.default_featured_days	Default number of days for content to be featured. End date is calculated from the date the content is featured on.
sn_communities.max_featured_limit	Maximum amount of featured content at forum or at global level.
sn_communities.featured_global_notify_user	Send notifications to community users when content is featured on the community homepage. This property is inactive by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Featured content properties (continued)

Property name	Description
	Note: Notifications are always sent to community administrators and moderators.

To send out email notifications when featured content expires, set the Featured Content Expire scheduled job to **Active**.

Role required: sn_communities.admin, sn_communities.community_moderator, sn_communities.forum_admin, or sn_communities.forum_moderator

Procedure

1. Navigate to the community homepage.
2. Click the content you want to feature.

   Note:
   Question and Answer content types are not enabled for featuring by default. To enable Question or Answer content types for featuring, navigate to **Community** > **Administration** > **Content Types**. Click the content type you want to enable and select the **Allow Featuring** check box. In the same way, you can also disable content types for featuring.

3. Click **...** and **Mark as featured**.
4. On the Feature Content pop-up window, select whether to feature the content on the community homepage or in a specific forum.
   A notification that content has been featured is sent out to the author of the content, community users who commented on the post, and community users who are subscribed to the post. If featured content has expired or is removed from the featured content list by another user, community and forum administrators are notified.

Email a community user

Send a private message to a community user directly from the community.

Before you begin

Role required: sn_communities.admin, sn_communities.community_moderator, sn_communities.forum_admin, or sn_communities.forum_moderator

An email client must be configured.

About this task

Uses for private messaging can include warning a user about use of a banned word, welcoming a new user, or informing users about incorrectly placed content in a forum. You can privately message a user from any community content, a comment, the Leaderboard, or the Community Profile page.

Procedure

1. Navigate to the community homepage.
2. Point to the community user name.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Email User**.

Note:
The email opens in your local email client.

View a list of questions and create a case

View questions that can potentially be converted to cases, the community portal provides a page with a list of questions created by contacts or consumers.

Before you begin

Role required: sn_customerservice_manager, sn_customerservice_agent, sn_customerservice.consumer_agent, sn_communities.admin, or proxy_case_creator

About this task

This page displays questions from the forums to which the user has access.

Procedure

1. From the community portal, select **Community** > **Questions to Case** to open the list of questions.
   This list includes questions that have been posted by a contact or a consumer and for which a case has not yet been created.
2. Use the filters on this page to filter the question list:
   - View questions for all forums or for the selected forum
   - View questions posted within the selected time frame: 7, 15, or 30 days
   - Sort by the most recent questions or older questions
   - Sort by the question status: all, solved, unsolved, or unreplied
3. To create a case from one of the questions in the list, select a question to open the question page.
4. Select the overflow icon (**...**) and then select **Create Case** to open a Create Case form.
   The **Create Case** action is available if a case has not yet been created from a question. Once a case has been created, this action is no longer available.

   Note:
   The **Create Case** option is available for the question posted by an external user.

   Information from the question is mapped to the fields on the case.
5. Enter any additional information in the fields on the Create Case form.
   For example, add **Description** for the case.
6. If necessary, attach a file to the case.
7. Select **Submit**.
   You are returned to the question content page. The case number appears in the question header after the case is created. The question author, the customer service agent or consumer service agent, or any user with the proxy_case_creator role can see the case number.

   The contact or consumer who posted the question can also view the case by navigating to **My Cases** on the Customer Service Portal or Consumer Service Portal.

Gamification

Encourage users to participate and contribute content in the community by providing incentives in the form of points, achievement levels, and badges.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the gamification framework to:

- Configure point values associated with specific user activities.
- Define achievement levels based on earned points.
- Create and assign badges to recognize users.

Community administrators can:

- Create rules and configure points that users receive for activities on the community.
- Create tracks to logically separate points assigned in the communities into different areas.
- Create levels in the community where users can achieve expertise or a reputation and then configure level ranges within each level definition.
- Create badges to award to users for different achievements.

Community users can:

- Perform activities and accrue points.
- Achieve levels based on point totals.
- View leaderboards to find community experts on specific forums or topics.
- See their own standing within the community.
- See gamification achievements on their user profiles.

Gamification components

The gamification feature includes several components, such as rules, levels, and tracks, that enable users to earn points and badges for community activities.

Rules

Gamification rules allow you to configure points that users receive for activities on the community.

Gamification includes several pre-defined rules. The gamification administrator can use these rules, modify them as needed, or create new rules. These pre-defined rules include:

- Comment marked as helpful: 5 points
- Document marked as helpful: 5 points
- Video marked as helpful: 5 points
- Blog marked as helpful: 5 points
- Answer marked as helpful: 20 points
- Document bookmarked: 20 points
- Blog bookmarked: 20 points
- Video bookmarked: 20 points
- Answer marked correct for a question: 40 points

When a user performs an activity that has a gamification rule, the user profile identified in the rule receives points. Points received through a gamification rule can be configured to accumulate toward:

- Overall points across the entire community
- Points in forums associated with the activity

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Points in topics associated with the activity
- Points in a track
- Points assigned for a combination of forums, topics, and tracks

If users revert previous activities, the points associated with these activities are removed. As an example, if a rule has been defined and a user creates a blog, they are awarded points. The points are deducted when the blog is deleted. If a rule has not been defined and a user creates a blog, no points are awarded. If the user removes it once a rule has been defined, points are deducted even though none were awarded in the first place.

Related topics

Create a gamification rule

Tracks

Tracks provide a way to logically separate points assigned in the communities into different areas.

Gamification includes two pre-configured tracks:

- Community Expertise
- Community Participation

While the application is configured to accumulate points by tracks, gamification does not currently display tracks in the community portal.

Related topics

Create a gamification track

Levels and level ranges

Points accumulated by community users can help them achieve different reputation levels.

The system is pre-configured with levels where community users can earn points and achieve expertise or a reputation:

- Global: overall points accumulated across the entire community
- Forum: points accumulated in forums associated with the activity
- Topic: points accumulated in topics associated with the activity

Gamification administrators can configure level ranges within each level. These level ranges progress from a starting point value to a higher value (point ranges do not overlap) and have unique, configurable names. For example, in the Global level, a user that has earned 100–499 points is a Newbie while a user that has earned 500–999 points is an Enthusiast.

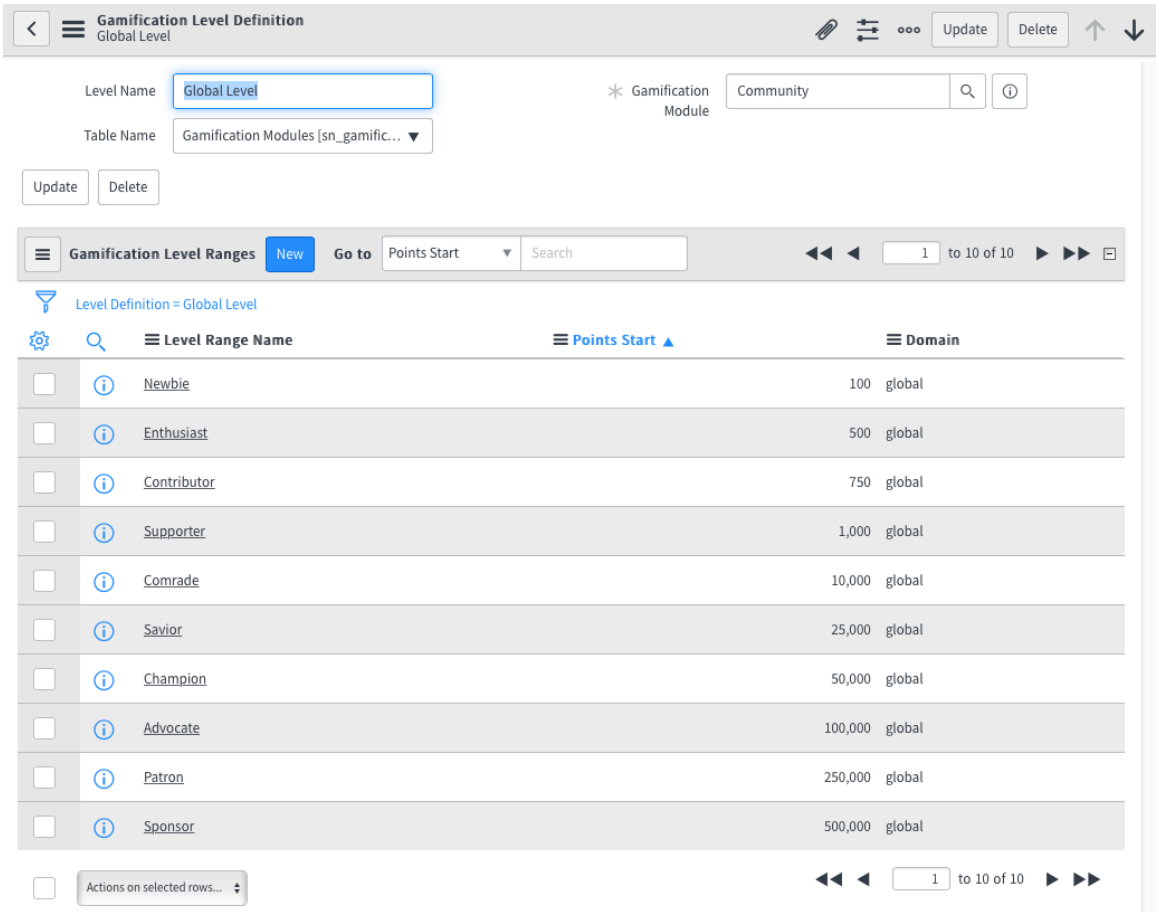
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Gamification Level Definition form



In the community portal, users can see level range names and point totals in the gamification user interface components.

- On the leaderboard page and leaderboard widgets
- At the top of a user's profile below the user name and title
- On the user profile page in the Achievements tab
- On content pages

Related topics

Manage gamification levels

Manage gamification level ranges

Badges

Users can earn badges for achievements or areas of expertise within the community. Gamification moderators manually assign badges to users.

Gamification includes several predefined badges. Each badge includes:

- A name
- An icon
- A brief description

Gamification administrators and moderators can award badges to community users and also remove badges. A badge can be awarded to a user one time. If a badge is removed from a user, it can be awarded to that user again.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Earned badges are visible in the community portal in the gamification user interface components. Community users can see earned badges and available badges on their own user profile page in the Achievements tab.

Related topics

Create a gamification badge

Points

Users earn gamification points by performing activities in the community.

Users can earn points within a community, a forum, or a topic. As users accrue points, they achieve level ranges. Point totals appear on leaderboards and on user profiles, in the profile header, and in the Achievement tab. After points are awarded to a user, an entry appears at the top of the Points list and the user's point total is updated.

The Points list has a widget instance option to **Show points for private forum**.

- When set to true, the point record displayed in the user profile does not show the forum name if the user performing the action does not have forum access. It displays "Private Forum" in place of the forum name.
- When set to false, the point record does not display in the user profile.

The Points list also has a widget instance options for the **Page size**, which determines the number of results displayed in the list. If there are more results than the number specified in this option, a button to show additional results appears at the bottom of the points page.

Gamification user interface components

Gamification information appears on leaderboards, the user profile page, and content pages.

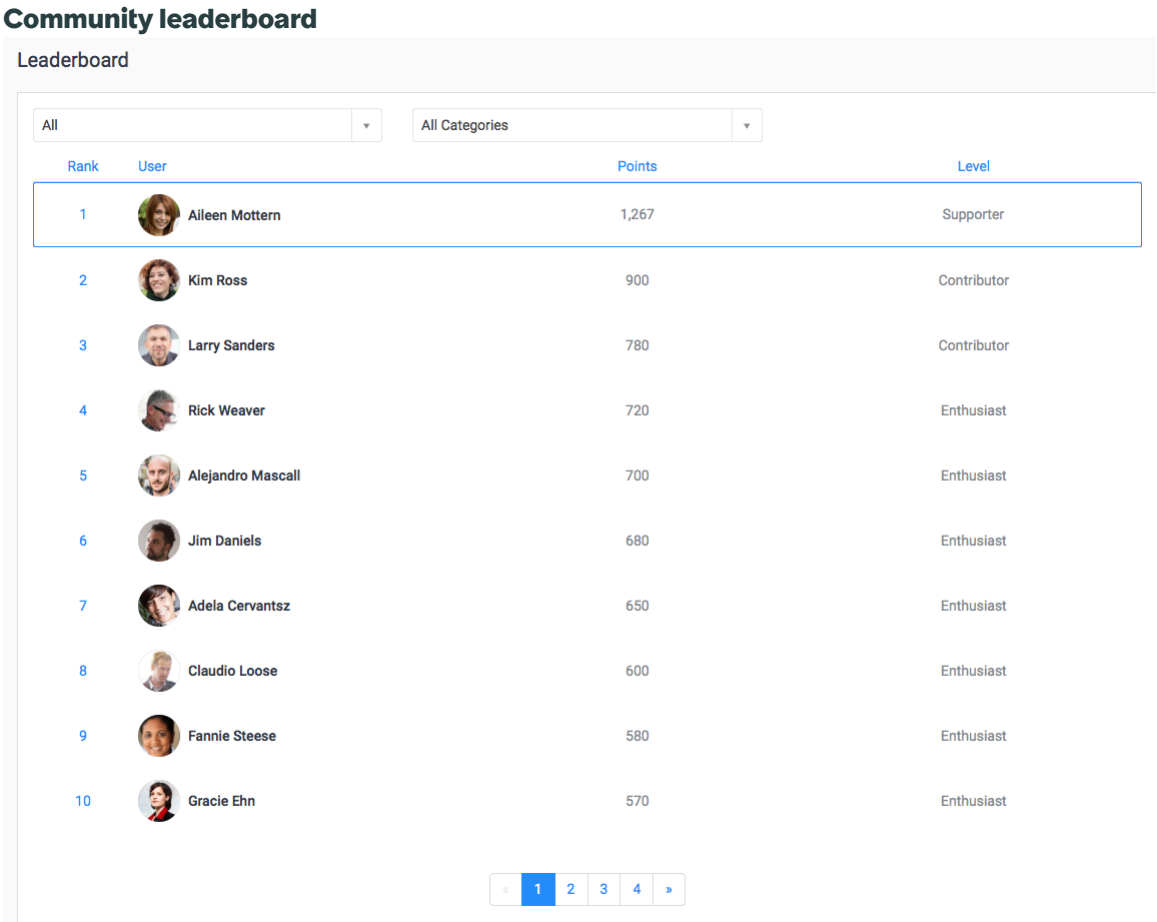
Leaderboard page

The leaderboard page displays the top contributors in the community, in a forum, or in a topic.

Users appear on the leaderboard based on the number of earned points and are ranked in descending order. You can filter the leaderboard to display information for the current month or all-time and by a specific forum or topic.

To display the leaderboard, navigate to **Community** > **Leaderboard**. You can also click **Show Leaderboard** on the leaderboard widget. When navigating to the leaderboard from a leaderboard widget on a forum/topic landing page, the leaderboard shows the top point earners for that forum/topic.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



For each user, the leaderboard displays:

- Rank: shows the rank depending upon the selected filters (time, forum or topic)
- Name
- Profile photo (if available) or initials
- Current level: shows global, forum, or topic level depending upon the selected filter

By default, the leaderboard displays 10 users per page. Users can use the pagination controls to view additional pages. Pointing to a user name in the leaderboard displays a pop-up window with more information about the user.

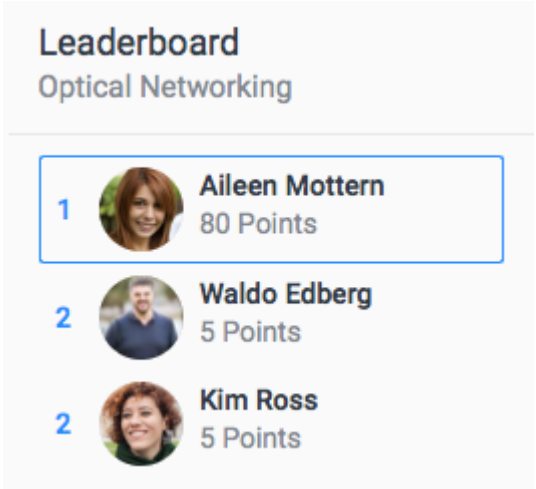
Leaderboard widgets

Leaderboard widgets appear on the Community homepage and on forum and topic landing pages. These widgets display the users with the highest point totals within the community, forum, or topic.

The leaderboard widget shows the top five users. If there are more than five users that have earned points within the community, forum, or topic, **Show Leaderboard** appears at the bottom. Click this button to display all of the users on the leaderboard page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community forum leaderboard widget



For forums and topics, the leaderboard widget header displays the forum or topic name. When navigating to the leaderboard page from a forum/topic, the leaderboard shows the top point earners for that forum/topic.

System administrators can configure settings for the leaderboard widget:

- The number of users displayed in the widget (default is 5, maximum is 10)
- The time period (overall or current month)
- The leaderboard type (community, forum, or topic)
- Anchor to a specific forum or topic (not recommended)

User profile page

The user profile page displays gamification information that showcases the user's expertise.

The gamification information is shown in three sections of the user profile page:

- In the header area
- In the Achievements tab
- In the forum and topic expertise widgets

User profile header area

When the gamification feature is enabled, the user profile header area includes the user's current gamification achievements. This information appears just below the user name and title:

- The top three badges that have been awarded to the user. Pointing to a badge displays the badge name.
- The total number of points earned by the user.
- The current global level achieved.

Achievements tab

Users can view details about gamification levels, badges, and points on the user profile page in the Achievements tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Achievement tab field and description	
Levels	A list of the levels available to the user, with the current level highlighted. This tab includes a link to the Community page **How to Earn Points**.
Badges	A list of the earned badges and available badges for the user. Earned badges appear at the top of the list. Earned badges are sorted by the most recently earned. Available badges appear below earned badges. Users can filter this list to view all badges or earned badges. When viewing another user's profile, only the earned badges are displayed and are sorted by the most recently earned.
Points	A history of the points earned and the activities performed by the user. This list includes the last 10 activities. Click **Show more** to display additional pages. Gamification moderators can award and remove points for community users. This tab includes a link to the Community page **How to Earn Points**.

Forum and topic expertise widgets

The forum and topic expertise widgets on the user profile page provide a visual representation of the user's top areas of expertise.

The number within the circle and the blue highlight around the circle represent the number of levels completed. For example, 2 of 5. The number below the circle indicates the total number of points that the user has earned within the forum or topic. The widget displays up to five items and the system administrator can configure the widget to show up to a maximum number of 10 items.

Clicking the info icon displays the forum or topic levels and the point ranges.

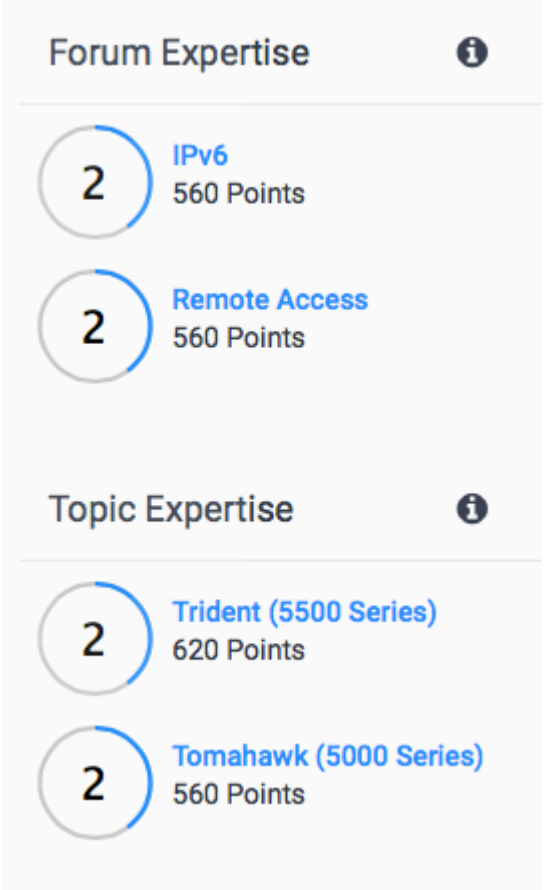
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forum and topic expertise widgets



Community content pages

The user's gamification level and badges are displayed on the content pages, so that other community users can view the reputation of the content contributor.

Pointing to a user name on content pages such as questions, blogs, and videos displays a pop-up window with gamification information including badges earned, point total, and level name. This information is available for the author or a user who has replied or commented on that content.

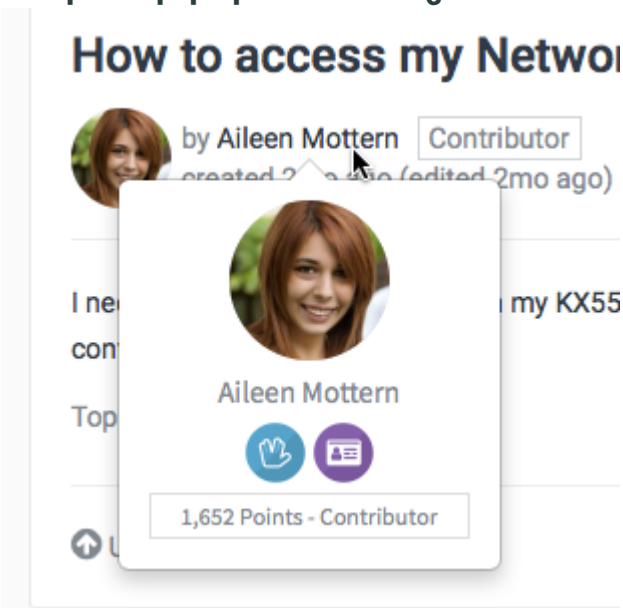
The community administrator can change the displayed level to show either the global level or the forum level. This display can be controlled by the sn_communities.content.show_gamification_level property.

Depending upon the information available, there can be three different versions for the pop-up:

- Profile photo and name
- Profile photo and name with global points
- Profile photo and name with global points and badges

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User profile pop-up window with gamification information



Gamification notifications

Community users receive notifications about badge assignments and levels achieved through the activity feed.

This includes global, forum, and topic levels achieved. A user, or any of their followers, are notified through an activity feed update in the following scenarios:

- When a user advances a level (global, forum, or topic)
- When a user earns a badge

How to earn points

In order to be transparent to your users about gamification rules, you can share the points received for community activities.

Navigate to **Community** > **How to Earn Points** for a description of the activities that users can perform to earn points. This page has links to the user's profile page. If gamification rules are modified, then this page shows the updated information.

Moderate gamification

Monitor points earned by users and award points and badges to users based on their participation within the community.

Award or remove points for a community user

Award points to a user to recognize their contributions to the community. Remove points for a user if you observe that they are cheating the gamification system.

Before you begin

Role required: sn_gamification.moderator

Procedure

1. Navigate to the Community homepage.
2. Go to **Community** > **Leaderboard**.
3. Click the name of the user on the leaderboard to open the user profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click the profile overflow icon (**...**) and select **Assign Points**.
5. In the Assign Points pop-up window, enter the number of **Points**, a **Reason** for awarding the points, and select a **Track**.
   a. To assign points, the points entered should be a positive value such as 100.
   b. To remove points, the points entered should be a negative value such as 100.
   The maximum number of points that can be awarded or removed at one time is 1000.
6. Click **Assign Points**.
   An entry for the point assignment activity shows at the top of the Points list and the user's point total is updated.

Award a badge to a user

Award gamification badges to community users to recognize their community activities.

Before you begin
Role required: sn_gamification.moderator, sn_gamification.admin

About this task
A badge can be awarded to a user only once. If a badge is removed from a user, it can then be awarded to that user again.

Procedure
1. Navigate to **All** > **Community** > **Gamification Data** > **Profile Badges**.
2. Click **New**.
3. Select a **Badge** from the Gamification Badges list.
4. In the **Live Profile** field, add the name of the user.
5. Click **Submit**.
   The badge is assigned to the user and it appears on the community portal.

Remove a badge from a user

Remove a gamification badge from a community user if it is no longer relevant for that user.

Before you begin
Role required: sn_gamification.moderator, sn_gamification.admin

Procedure
1. Navigate to **All** > **Community** > **Gamification Data** > **Profile Badges**.
2. Select the **Active** field for the desired user and badge.
3. Change the **Active** field to false.
4. Click **Update**.
   The badge is removed for that user and is no longer visible on the community portal.

Communities references

Reference topics provide additional information about communities.
